*Low precision; no estimate reported.

N/A: Not applicable.

NOTE: Serious Mental Illness (SMI) is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder that met the criteria found in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV) and resulted in serious functional impairment. Serious mental illness estimates in 2011 used in the comparisons may differ from previously published estimates due to revised estimation procedures. For details on the methodology, see Section B.4.3 in Appendix B of the *Results from the 2012 National Survey on Drug Use and Health: Mental Health Findings*.

NOTE: Unmet Need for Mental Health Treatment/Counseling is defined as a perceived need for treatment that was not received. Respondents with unknown information on unmet need were excluded.

¹ Respondents could indicate multiple reasons; thus, these response categories are not mutually exclusive.

² Estimates in the Total column represent reasons for not receiving mental health treatment/counseling for all persons aged 18 or older with Serious Mental Illness and an unmet need for treatment, including those with unknown mental health treatment/counseling information.

³ Mental Health Treatment/Counseling is defined as having received inpatient care or outpatient care or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use. Respondents with unknown treatment/counseling information were excluded.

⁴ Respondents with unknown or invalid responses to the other-specify question on Some Other Reason for Not Receiving Mental Health Treatment/Counseling were classified as not having received treatment for Some Other Reason.
