This table uses data from URS Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2014

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a

Age Age is calculated at midpoint of the State's elected reporting period (i.e., December 31, 2014).
 Gender Pregnant women - pregnancy status search was limited within the reporting period for clients 15 years and older, which is the earliest age used by CDC to report teen pregnancy.
 Race Demographic values (age, gender, race, ethnicity) - value was based on the client's most recent record except when the value is Unknown and search for a valid value was made within the 12 months prior to the end of the reporting period.
 Overall Data is slightly under reported, due to provider changes in electronic health records. This under reporting is anticipated to be a one-time issue.

URS Table Number	General Notes
All	Data is slightly under reported, due to provider changes in electronic health records. This under reporting is anticipated to be a one-time issue.
5 A/B	Due to the way the information is collected, this data breakdown is more representative of the actual number of consumers whose services are funded by both Medicaid and Non-Medicaid. Tables 5a/b were completed by the state this year using a slightly different approach from 2014 in which the table was prefilled using the 'Health Insurance' data field of the MH-TEDS. Using the health insurance field alone is not adequate.
14A/B	Due to reason above (see comment for table all), a general decline in absolute number across racial categories were observed. However, the rate of distribution across these categories remained relatively stable from last year. The rate of change for 'Multi-racial' group of 22% was due to the sensitivity of having a small number.
