Note:

Are Client Counts Unduplicated?	Unduplicated	Number of States with Unduplicated Counts	43
	Duplicated between Hospitals and Community		
	Duplicated Among Community Programs		
	Duplicated between children and adults		

This table uses data from URS/DIG Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2010

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a

Age May be duplication between persons served in DMHAS and DCF systems for persons age 18 to 21 years old.
Gender None
Race DMHAS-71.4% (7,591) of "Race Not Available" (RNA) represent clients with race as "Other". Total "unknown" race equals 3,048. DCF-1,838 (27.1%) of the 6,767 clients reported as RNA, we est. had no race reported, 4,844 (71.5%) report being "Other" race. Unduplicated count for adults is across DMHAS system.

Table 2b

Age May be duplication between persons served in DMHAS and DCF systems for persons age 18 to 21 years old.
Gender None
Race For DMHAS, 71.4% (7,591) of "Race Not Available" represents clients with race as "Other". Total "unknown" race equals 3,048.
Overall Unduplicated count for adults is across DMHAS system.

Note:

*In Labor Force is the sum of consumers employed and unemployed.

**With Known Employment Status is the sum of consumer employed, unemployed and not in labor force.

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data for URS/DIG Table 4a.

State Notes:

Deferred Diagnosis = 15% (3,474 out of 23,115) of those having no Dx or deferred Dx

Note:

US totals are based on states reporting.

This table uses data from URS/DIG Table 20.

State Notes:

None

STRUCTURE DOMAIN: State Mental Health Agency Controlled Expenditures for Mental Health, FY 2009**STATE Connecticut**

	Expenditures: State	Percent of Total Expenditures: State	Expenditures: U.S.	Percent of Total Expenditures: U.S.
State Hospitals-Inpatient	\$220,600,000	32%	\$9,790,074,311	26%
Other 24-Hour Care	\$139,300,000	20%	\$7,066,269,663	19%
Ambulatory/Community	\$280,400,000	40%	\$19,905,016,805	53%
Total	\$693,800,000	-	\$37,611,390,427	-

Note:

Other 24-Hour Care includes state psychiatric hospital and community based other 24-hour as well as community based inpatient expenditures.

Ambulatory/Community includes expenditures for less than 24-hour care services provided at state psychiatric hospitals. It excludes community based other-24 hour and community based inpatient expenditures.

Total also includes additional SMHA Expenditures for research, training, administration, and other central and regional office expenditures.

Data from NRI's Funding Sources and Expenditures of State Mental Health Agencies, FY 2009 reports - Table 18 "SMHA-Controlled Expenditures for Mental Health Services."

U.S. totals are based on 50 states reporting.

More information on the State Mental Health Agency's Revenues & Expenditures as well as State Footnotes can be found on the NRI website:
<http://www.nri-inc.org/projects/Profiles/RevenuesExpenditures.cfm>

STRUCTURE DOMAIN: State Mental Health Agency Controlled Revenues by Funding Sources, FY 2009

General Notes FY 2011

Connecticut

URS Table Number	General Notes
2A & 2B	Unduplicated count for adults is across DMHAS system.
2A & 2B	For DMHAS, 71.4% (7,591) of "Race Not Available" represents clients with a race value of "Other". Total "unknown" race equals 3,048.
4	DMHAS used most recent status on record either at admission, discharge or 6-month assessment to determine employment status.
4	Total number of consumers unemployed decreased from last year and total number of consumers not in Labor Force increased from last year is due to improve data reporting. In SFY 2011, DMHAS implemented two new data systems. With the introduction of these systems, the department moved to requiring assessments every 6 months instead of only at admission and discharge. This resulted in much more timely and accurate status of such measures as employment status and living situation.
5A & 5B	Medicaid status based upon insurance type reported for each episode of care, i.e., not based on claims data. In previous years, MDHAS used Medicaid Eligibility number as the method for identifying Medicaid reimbursed services. This method may have over reported persons receiving Medicaid only services.
6	The decreased in total number of Consumers Served in State Hospital at the beginning of the year is due to: 1) closure of one DMHAS operated hospital (Cedar Ridge in May 2010) and 2) exclusion of sub-acute beds which had been included in past reporting. The increased in total Number of Consumers Served in Other Psychiatric Inpatient Settings at the beginning of the year and the decreased in total Admissions to Other Psychiatric Inpatient Settings at the beginning of the year are occurred in the DMHAS system. With the change to Medicaid reimbursement for what had been state funded general assistance clients for this level of care beginning in April 2010, these individuals are no longer reported to the department. Those community based hospitals receiving DMHAS grant funds for this level of care continued to report persons served in 2011. DMHAS learned that some hospitals were reporting all clients (entitled as well as non-entitled) and asked hospitals to limit reported clients to those that are reimbursed by the DMHAS grant account only. The decreased in the Average of LOS of adults (in facility < 1 year) who were state hospital residents at the end of the year is due to outliers which are causing the mean numbers of days to be "pulled" in an upward directions.
6	The decreased in total Number of Consumers Served in Residential Treatment Centers at the beginning of the Year and the Total Admissions to Residential Treatment Centers During the Year The 100% decrease is due to the closure of one of our residential facilities, High Meadows and the consolidation of two behavioral health institutions - Riverview Hospital and Connecticut Children's Place, with new brief treatment units developed for special populations. Brief residential treatment means 120 days at both the North and South Campus residential units and requires discharge planning form the outset with the target of return to home or the community. Two emergency beds at each of the campuses are available to the department's regional offices, but are limited to a 72-hour hold. The newly merged facility has been named the Albert J. Solnit Psychiatric Hospital for Children.
9, 11, & 11a	The CT Department of Children and Families (DCF) began requiring the collection of the YSSF data on which these tables are based on July 1, 2011. There is therefore very little data available for SFY 2011 (July 1, 2010 - June 30, 2011). The data reported in these tables actually comes from the early part of SFY 2012, i.e. July 1 - October 17, 2011. For SFY 2012 Connecticut will report based on the entire fiscal year
11	Adult Survey Approach - Methodology of Collecting Data: The data was handed out and self-administered.
12	The percent of adults reported by DMHAS meeting the Federal definition of SMI shown is based upon individuals served in State-operated and PNP providers in the community, having a diagnosis DSM code of Axis I: 295, 296, 297, 298, 300.4, 301.13, and 311; Axis II: 301.11.
12	Methodology for counting the number of clients with co-occurring mental health and substance abuse disorders (DMHAS): Adult consumer's active in MH programs during the reporting period that have had a SA diagnosis either during their MH treatment or in the year prior to their admission to MH treatment.

URS Table Number	General Notes
12 & 14A	There had been under-reporting of the percent of children with SED in the previous data system. With the implementation of a new data system, we engaged in a series of education/training on SED with the provider community. Additionally, for certain programs such as Extended Day Treatment which is an intermediate level of care service that treats only SED clients, the new data system is automatically coded to identify all of these clients as SED, thus not relying on accurate entries by many therapists. Both of these factors has contributed to the increased percentage, which we believe more accurately reflects the population served.
14A & 14B	For adults, data are missing for persons served with a deferred diagnosis. SMI determination based only on DSM diagnosis and does not include level of functioning. diagnosis codes for determining SMI include: Axis I: 295, 296, 297, 298, 300.4, 301.13, and 311; Axis II: 301.11
14A	Variations in the total number and subgroups were due to increased reporting by both DMHAS and DCF. For DMHAS, the reason for the increase (overall 6,527) in persons identified with a SMI diagnosis is attributable to a methodological change in identifying persons with a SMI. DMHAS restructured its analysis such that, if Axis I and II diagnoses found during report period are "unknown" or "deferred" (799.99) then the program looked for any qualifying Axis I or II diagnoses outside of the report period in episodes that were open during the report period. In analyzing the difference in 2011 figures for age and gender groups, there were only marginal differences when compared to the 2010 figures.
16	Total Unduplicated Number of Adults with SMI: DMHAS uses only diagnosis to determine SMI and does not include level of functioning.
16	With the implementation of DMHAS' new client information systems in 2010, FY 2011 is the first year in which all supported employment programs and clients are being reported.
16	For FY 2011, the number of persons reported as receiving supported housing is an unduplicated count and includes only those having a diagnosed mental illness or a co-occurring disorder (MI and substance use), i.e., no one with only a substance use disorder included.
16	Family Functional Therapy: Adherence information are recorded on the web-based FFT Client Service System. In accordance with FT protocol, our agency monitors fidelity through the clinical lead. Fidelity is also monitored on an ongoing basis by FFT, Inc. through a variety of measures including the national supervisor who monitors our site. Fidelity is measured weekly by the on-site clinical lead and monthly by FFT, Inc., through our national consultant.
16	Multi-systemic Therapy: Advanced Behavioral Health, Inc. (vendor) uses Therapist Adherence Measures (TAM), Supervisory Adherence Measures (SAM) and Program Implementation Reports to measure fidelity weekly and monthly.
16	The number of individuals receiving Supported Housing decreased from 2,910 to 893 from 2010 to 2011. This was due to improved data reporting capability to identify only those housing clients who met criteria for a SMI or SMI/Co-occurring substance use disorder. In past URS reports, DMHAS was unable to unduplicated clients receiving this service or identify only those having a SMI or SMI and Co-occurring vs. a substance use disorder only. Regarding Supported Employment services, the same held true in that DMHAS' new information system provides a more accurate and comprehensive reporting of this service. Also, DMHAS recently rebid its employment services, aligning its service network towards this EBP thus increasing its service capacity. DMHAS only began reporting ACT services in 2011 after reexamining its services in this area to assure that they were within the EBP parameters.
17	The decreased in total number of consumers receiving Integrated Dual Diagnosis services from last year id due to programs are newly required to submit substance use diagnoses. The number of IDDT programs increased but the number of individuals served went down. Some mental health programs are not now entering SA diagnoses, decreasing the number of individuals. With the implementation two new data systems in 2010, DMHAS-operated and funded mental health programs are now required to submit substance use diagnoses, for those screening positive, along with some additional SA-related information. While the number of programs that met fidelity for IDDT increased over the past year, the number of individuals receiving IDDT went down. It seems that some mental health programs are not entering any SA diagnoses, thereby decreasing the numbers of individuals for this indicator. DMHAS is working to implement some additional training and interventions with providers to rectify this issue.

URS Table Number	General Notes
17	With the implementation two new data systems in 2010, DMHAS-operated and funded mental health programs are now required to submit substance use diagnoses, for those screening positive, along with some additional SA-related information. While the number of programs that met fidelity for IDDT increased over the past year, the number of individuals receiving IDDT went down. It seems that some mental health programs are not entering any SA diagnoses, thereby decreasing the numbers of individuals for this indicator. DMHAS is working to implement some additional training and interventions with providers to rectify this issue.
19	Children/adolescent services: There is some duplication in the tables of clients in community services, resulting from characteristics of the Connecticut Department of Children and Families' Programs and Services Data Collection and Reporting System (PSDCRS). Client data entered into PSDCRS is unduplicated within each provider. Normally data is de-duplicated across providers by assuming that clients are the same if they have the same first and last name, DOB, and gender. For most of the tables in this report (those not involving SED) we also require that they have the same race, Hispanic/Latino origin status, health insurance coverage and living situation, so if any of these data elements are reported differently between providers the client would be counted more than once. This is done because all of the data elements just listed are used to classify clients in one or more tables in the MHBG report, so if they were not included in the de-duplication process as just described, the totals in the tables would be inconsistent with each other. There is also possible duplication by simple data entry errors, such as different spellings of a client's name by different providers.
19A	Adult Criminal Justice Involvement: DMHAS changed its reporting method for calculating criminal justice involvement beginning with the FY 2010 URS Tables, from the PPE (Probabilistic Population Estimation) statistical model to direct (individual records) linking of databases from the DMHAS mental health client information system and Connecticut's Department of Public Safety's (DPS) arrest data. The DPS arrest data include suspense arrest records, i.e. those held for verification with the Automated Fingerprint Identification System (AFIS) for the FY 2010 projection and going forward.
19A	At this time DCF's data system, Programs and Services Data Collection and Reporting System (PSDCRS) does not provide the data necessary for T1 time period, because it asks whether the client has been arrested during the six months prior to admission, and T1 requires whether the client has been arrested in the previous twelve months. For T2 the data comes primarily from a PSDCRS question asked at discharge, which asks whether the client was arrested during the episode, and the table addresses whether the client has been arrested in the previous twelve months. Plans are being developed to correct this error to enable full reporting for FY 2012.
19B	At this time DCF's data system, Programs and Services Data Collection and Reporting System (PSDCRS) does not provide the data necessary for T1 time period, because it asks whether the client has been suspended or expelled from school during the six months prior to admission, and T1 requires whether the client has been suspended or expelled from school in the prior twelve months. For T2 the data comes primarily from a PSDCRS question asked at discharge, which asks whether the client was suspended or expelled during the episode, and the table addresses whether the client has been expended or expelled in the previous twelve months. Efforts are underway to correct the problem.
20A & 20B	Rates of 30 day and 180 day readmission to DMHAS operated hospitals dropped and remained the same, respectively. For 2011, DMHAS did review its previous coding and made some minor improvements to ensure no transfers or furloughs were included. Also, no sub acute beds were included in the 2011 URS Table.
