

Idaho 2011 Mental Health National Outcome Measures (NOMS): CMHS Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States
Penetration Rate per 1,000 population	6,879,637	7.26	22.10	56
Community Utilization per 1,000 population	6,587,988	5.66	21.17	55
State Hospital Utilization per 1,000 population	156,387	0.61	0.50	53
Other Psychiatric Inpatient Utilization per 1,000 population	364,926	0.79	1.37	41

Adult Employment Status	U.S.	State	U.S. Rate	States
Employed (Percent in Labor Force)*	578,225	44.1%	34.7%	54
Employed (percent with Employment Data)**	578,225	19.5%	18.1%	54

Adult Consumer Survey Measures	State	U.S. Rate	States
Positive About Outcome	63.0%	70.5%	51

Child/Family Consumer Survey Measures	State	U.S. Rate	States
Positive About Outcome	46.8%	64.6%	51

Readmission Rates:(Civil "non-Forensic" clients)	U.S.	State	U.S. Rate	States
State Hospital Readmissions: 30 Days	11,213	2.5%	9.0%	50
State Hospital Readmissions: 180 Days	25,438	8.4%	20.5%	52
State Hospital Readmissions: 30 Days: Adults	10,105	2.7%	9.3%	50
State Hospital Readmissions: 180 Days: Adults	22,812	9.2%	21.0%	52
State Hospital Readmissions: 30 Days: Children	1,108	0.0%	7.3%	24
State Hospital Readmissions: 180 Days: Children	2,620	1.2%	17.2%	27

Living Situation	U.S.	State	U.S. Rate	States
Private Residence	4,031,681	77.3%	82.0%	55
Homeless/Shelter	151,011	8.6%	3.1%	53
Jail/Correctional Facility	89,663	5.6%	1.8%	50

Adult EBP Services	U.S.	State	U.S. Rate	States
Supported Housing	68,498	0.7%	2.5%	38
Supported Employment	50,394	1.4%	1.7%	40
Assertive Community Treatment	65,311	6.6%	2.1%	41
Family Psychoeducation	17,644	-	1.2%	16
Dual Diagnosis Treatment	58,876	6.1%	3.6%	24
Illness Self Management	159,167	6.6%	11.6%	21
Medications Management	296,177	65.1%	22.6%	18

Child/Adolescent EBP Services	U.S.	State	U.S. Rate	States
Therapeutic Foster Care	18,392	0.5%	1.7%	28
Multisystemic Therapy	8,448	-	1.1%	20
Functional Family Therapy	10,989	4.1%	1.8%	14

Change in Social Connectedness	State	U.S. Rate	States
Adult Improved Social Connectedness	61.8%	70.0%	51
Child/Family Improved Social Connectedness	71.2%	85.3%	49

*Denominator is the sum of consumers employed and unemployed.

**Denominator is the sum of consumers employed, unemployed, and not in labor force.

* Reported under Hispanic Origin.

Note:

Are Client Counts Unduplicated? Duplication between races and more than one race **Number of States with Unduplicated Counts** 43

This table uses data from URS/DIG Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2010

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a

Age None
 Gender None
 Race Children's Mental Health captures the race of each child and counts children of more than one race in each race as well as in the category of more than one race. This results in duplication and inconsistencies in numbers between Table 2A & 2B.
 Overall Data from children's mental health was extracted from FOCUS system. Data for adult mental health (i.e. 18 and over) was extracted from the WITS system.

Table 2b

Age None
 Gender None
 Race Children's Mental Health captures the race of each child and counts children of more than one race in each race as well as in the category of more than one race. This results in duplication and inconsistencies in numbers between Table 2A & 2B.
 Overall None

Note:
This table uses data from URS/DIG Table 14a, Table 14b and from the US Census Bureau. All denominators use US Census data from 2010

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

Note:

Admission Rate= number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS/DIG Table 3.

This table uses data from URS/DIG Table3 and 6.

Table 3 State Notes:

Age None
 Overall Data extractions from VistA (State Hospitals); FOCUS (Children); WITS (Adults)
 Gender None

Table 6 State Notes:

Hospital State Hospital data was extracted from the VistA data system used by State Hospital South and State Hospital North.
 Other Inpatient Community hospitalization data for adult mental health was extracted from the WITS data system.
 Residential Residential treatment, other psychiatric inpatient and community program data for children was extracted from the FOCUS data system.
 Community AMH was derived from WITS extraction and CMH was derived from FOCUS.
 Overall Data extracted from WITS (AMH) & FOCUS (CMH). See General Notes for specific notes for detail.

Idaho

URS Table Number	General Notes
All	All Tables (Adults): The State of Idaho implemented the WITS data system in October 2009. This was the second year that data reports were extracted from the WITS system. State Hospital data was extracted from the VistA system used by the hospitals. Children's mental health began implementing WITS in 7/1/11, but SFY 2011 report extraction for CMH came from FOCUS. The Division of Behavioral Health is in the process of building a data warehouse, and it is hoped that this will increase the ability to extract credible, non-duplicative data.
All	There is a difference in eligibility definition for those 18-21 across systems. The Medicaid and Juvenile Justice systems define children as under 21 years of age, while the Division of Behavioral Health defines children as under the age of 18.
All	Individuals 18-20 are in a transition phase from a more generalized eligibility criteria system used by the Children's Mental Health system to a more restrictive eligibility criteria system used by the Adult Mental Health system. Diagnostic categories are different and eligibility does not always translate easily from the children's to the adult system.
All	The WITS vendor, FEI, provided an explanation of reasons that race and ethnicity counts could reflect minor duplications in WITS report extraction. They said that "These reports were built using unique client number to unduplicated clients...the WITS database stores race by client_id as primary key, not by unique_client_number, so the same client (same unique_client_number) might have 2+ client_id across agencies and hence might have 2_race_list..."
2b	Children's Mental Health captures the race of each child and counts children of more than one race in each race as well as in the category of "more than one race." This results in duplication and inconsistencies in numbers between Table 2A & 2B. Idaho's Children's Mental Health program transitioned to the use of the WITS system from FOCUS on July 1, 2011, this will allow for future years reporting to be extracted from WITS. Report extraction for SFY 2011 NOMS/URS for CMH was from FOCUS.
3	SFY 2010 and SFY 2011 data for adults was extracted from WITS; SFY 2009 data was extracted from an assortment of manual reports.
4	SFY 2010 and SFY 2011 data for adults was extracted from WITS; SFY 2009 data was extracted from an assortment of manual reports.
4	Tables 2A & 2B reflect the number of client with open intakes during the review period. Table 4 represents a subset of the 2A & 2B population. This subset is comprised of adult (not children) clients found eligible and admitted to the SMHA service delivery system. Our business process of admission and discharge is only applied to those clients found eligible for SMHA services
4	The ability to extract credible employment data from the WITS system improved in SFY11. This resulted in better identification of the employment status of clients served by the SMHA. Additionally, a WITS system business rule enforcement required clinical staff to input data related to this element prior to beginning treatment services.
5a, 5b	Medicaid numbers for those served by private providers are not captured or reported in the NOMS/URS. The SMHA's WITS system for adults does not capture Medicaid private provider data, and total penetration and other NOMS/URS data will therefore be significantly lower than the total number of individuals with SMI or SED served in Idaho by the SMHA and by the array of existing private providers. Children's Mental Health captures the race of each child and counts children of more than one race in each race as well as in the category of "more than one race." This results in duplication and inconsistencies in numbers between Table 5A & 5B.
5a, 5b	The Idaho SMHA provided SFY 2010 and SFY 2011 services to adults with SMI; some may have had Medicaid because private providers were unable to meet the intensity of needs, but most did not have Medicaid or any other form of insurance. Most children with SED and Medicaid receive services from private providers; some Medicaid eligible children are served through the State Children's Mental Health program. Medicaid transitioned to a new data system in SFY 2010 and this system has experienced numerous challenges that continued into SFY 2011. Medicaid data was unavailable for SFY 2011 NOMS/URS reporting.

URS Table Number	General Notes
6	One of the changes that happened in the past year from the policy level is the addition of Medication Management Only clients; policy was written and adopted that carved out a new 'med only' community program that could be followed and managed by nursing/medical staff versus the previous case management program that required a case manager in addition to medical providers. The documentation standard remains the same but we have streamlined access to this specific service increasing the capacity of the SMHA without the need for additional staff or resource. Further, we are meeting the community need of access to prescribers and medications. Anecdotally, we serve about 900 clients statewide through this program which is the approximate increase in community program numbers. I believe this policy decision and change in program arrangements is responsible for this increase. Second, Admissions to Other Psychiatric Inpatient appears to have also seen a legitimate increase in use due to funding and resource bottlenecks. Access to a State Hospital is gained first through an inpatient hospital stay followed by a transfer to one of the two state hospitals. In SFY11 both state hospitals were at capacity nearly every day resulting in wait lists up to two weeks. Funding has greatly impacted our ability to increase capacity to meet the community hospitalization needs in the adult population thus showing up in increased utilization of the alternative. The SMHA funds the wait list stays and this increased has been noted in our budget utilization as well.
11	MHSIP and YSS-F surveys are sent out annually and at case closure. At this time, we are unable to determine how many surveys were mailed to valid addresses for either children or adults (6b).
12	The SFY 2011 data for co-occurring diagnoses is a conservative 3% based on the WITS extraction of 595 total adults served by the SMHA with co-occurring diagnoses; all meet the federal definition of SMI w/substance use diagnosis (see Table 12). This figure captures ACT and FACT clients with co-occurring diagnoses, but data for adults served with crisis services who have co-occurring diagnoses is not tracked or included. The existing FOCUS data system for children/adolescents served by the SMHA does not capture those with co-occurring substance use disorders. The children's program transitioned to WITS on 7/1/11, with anticipated report extraction capability available in SFY 2012.
14a	SFY 2010 and SFY 2011 data for adults was extracted from WITS; SFY 2009 data was extracted from an assortment of manual reports.
14b	Children's Mental Health captures the race of each child and counts children of more than one race in each race as well as in the category of "more than one race." This results in duplication and inconsistencies in numbers between Table 14A & 14B. It is hoped that report extraction from the WITS system in SFY 2012 will resolve the duplication problem.
15	SFY 2010 and SFY 2011 data for adults was extracted from WITS; SFY 2009 data was extracted from an assortment of manual reports.
15	The ability to extract credible living situation data from the WITS system improved in SFY11. This resulted in better identification of the living situation of clients served by the SMHA. Additionally, a WITS system business rule enforcement required clinical staff to input data related to this element prior to beginning treatment services.
16	Employment services are provided through an interagency agreement with the Idaho Division of Vocational Rehabilitation (IDVR) and they are responsible for fidelity assessment. Data on Table 16 for Supported Employment was extracted from WITS; data availability was only for two months (i.e., 4/22/11-6/30/11) and this number is low. SFY 2012 WITS extraction should be more credible with a full year of data.
16	Supported Housing data for SFY 2011 was extracted from WITS; data for SFY 2009 and 2010 was provided from manual counts of Shelter Plus Care clients.
16	The number of youth participants served in SFY11 decreased from SFY10. Field I13 on Table 16 (Total unduplicated N – Children with SED) has historically been reported in a way that reflects consistency with numbers reported in Table 2A. It appears last year's numbers do not align with SFY10 Table 2A, thus appearing to be a larger difference in years than actually exists.
17	SFY 2010 and SFY 2011 data for adults was extracted from WITS; SFY 2009 data was extracted from an assortment of manual reports. The WITS system did not capture Illness Self Management in 2010. Regions reported that Illness Self Management was provided to ACT clients, and the SFY 2011 data reflects that the clients receiving ACT also received Illness Self Management.
17	The ability to extract credible data for adults with SMI receiving specific services from the WITS system improved in SFY11. Additionally, the SMHA service delivery system did increase the number of medication management services provided in response to a need identified and operationalized by a new state policy.
18	Data for adults with schizophrenia receiving new generation medications is pulled from WITS for community settings and state mental health systems, while VistA supplies State Hospital numbers. The total number served reflects a small N for both SFY10 & SFY11, percent variations are likely a reflection of this.
21	We are unable to extract reliable community hospitalization data from WITS for SFY 2011. A report extract was constructed but reflects gaps in services provided. This data available by request. We anticipate an interdepartmental workgroup to address this reporting need in SFY 2012.
