New Jersey

URS Table Number	General Notes
6	According to the DMHAS datasets there was a 33% decrease in the total number of admissions (duplicated) to "Other Psychiatric Inpatient" settings between 2010 and 2011. Based on currently available data, this observation is true, and such a change may be ascribed to an increase in the use of community-based treatment approaches.
8	In SFY 2011 DMHAS elected to apply the maximum allowable 5% of their grant for mental health administrative expenses with respect to the grant. In SFY 2010, the SMHA used less than that allowable 5%, therefore the increase in MHBG Expenditures for Non-Direct Service Activities observed between 2010 and 2011 is accurate.
9	NJ DCBHS reports that there was truly a 31% decrease in the number of children/adolescents reporting positively about Functioning.
11a	No Children's data was provided in table 11a by the New Jersey Division of Children's Behavioral Health Services (DCBHS)
12	Based on currently available data, the 19% decrease in the percent of adults served by the SMHA with co-occurring MH/SA diagnoses observed between 2010 and 2011 is valid.
17	Based on currently available data, the increases in both the numbers of consumers receiving Integrated Dual Dx Services and Illness Self Management Services has increased between 2010 and 2011. Part of these increases can be explained by improvements in reporting protocols (especially in the case of Illness Self Management Services).
20A and 20B	The increases between total percent admitted within 30 days and within 180 days, observed between 2010 and 2011 are valid. The large change in percent increase is mostly attributable to the small absolute values involved (e.g., 4% in 2010 to 7% in 2011).
