US totals are based on states reporting.

This table uses data from URS/DIG Tables 16 and 17.

US averages are calculated uniquely for each data element based on only those states who reported numerator (clients served) data.

#### State Notes:

Table 16: There were less providers participating EBP survey than 2010. Therefore, the numbers of clients served decreased. See General Notes in detail.

URS Table Number	General Notes
Table 16, 17	<p>There were less providers participating EBP survey than 2010. Therefore, the numbers of clients served decreased. However, collecting this information via a Provider Survey limited the amount of individual-level client data that could be collected. Therefore, we don't have any of the demographic breakouts and we don't know for sure if the clients who received these services are seriously mentally ill or seriously emotionally disturbed. Also, we cannot answer any of the questions about implementation - all of our responses would be "don't know" at this time. However, when we are able to assess this information in the future it would be helpful to have a response option that allowed for some providers implementing using toolkit and some implementing without.</p>
4	<p>Washington State used to report URS NOM tables are data reported by contracted Regional Support Network (RSN). There are two types of data reported by RSN: encounters and non-encounters (aka. "periodics"). Encounters record the actual services provided to consumers and "periodics" contain socio-demographic information (including employment and housing information). RSNs are not required to update the "periodics" on any regular basis. Consequently, some clients who received mental health services in WA State during FY11 did not have a "periodic" record during FY11.</p>
