URS Table Number	General Notes
14a	The data sources that show the largest increases for the American Indian/Alaska Native and Multi-racial population groups are the County information and the Medicaid information. One of the changes we made this year was how the calculations were made for the race/ethnicity. We followed the guidance, which are different from how we did the calculations in the previous years. Also impacting this is the fact that counties have been in the process of changing to a new management information system for a couple of years. As the counties are moving their information into the new system they are updating the information on current clients and providing more complete information on all clients.
15	The data sources show that the largest increases are in the county reported information, so we are assuming it is because they are being more diligent in their reporting as they move to their new management information system.
19A	Our data does not provide complete information to compare time 1 to time 2 as required by the URS tables. It also does not provide the information separated by gender as required for the URS tables. Additionally there is no identification of the number of consumers who started services during the past 12 months.
