General Notes FY 2012

Montana

URS Table Number	General Notes
4	Table 4 data were derived from one database (Recovery Markers), totaling 5,246 adult consumers, which is 25% of adults served (5246/21,093). The large changes in employment status between FY2012 and FY2011 are primarily due to thriving vocational programs, such as Workers Now. In addition to a 1% increase in those employed full-time, there was a shift among consumer's attitudes from being uninterested in working (-3%) or believing they are too disabled to work (-4%) to believing themselves to be able and actively looking for work (+7%). We also had a large increase in the number of adult consumers for whom Recovery Marker employment data was gathered (from 3,700 to 5,246), which would account for the increase in the number of consumers not in the labor force.
5A	The large decrease in consumers with Non-Medicaid Funding and the large increase in consumers with both Medicaid and Non-Medicaid Funding can be accounted for by the implementation of the Health Insurance Flexibility and Accountability (HIFA) waiver for consumers with a primary diagnosis of schizophrenia or bipolar. By the end of FY12, the HIFA waiver was nearly filled to capacity. During the month of enrollment, consumers are eligible for both Medicaid and Non-Medicaid, which increased the number of consumers, funded through both Medicaid and Non-Medicaid, and decreased the number with Non-Medicaid only funding.
6	The decrease in the number of consumers being served in the State Hospital at the beginning of FY12 compared with FY11 is consistent with the average daily census of the state hospital being lower in FY12 than in FY11. The explanations for the decrease are expanded services and utilization of those services, including: 1) short-term crisis stabilization facilities; 2) community liaison officers of both genders whose job is to ease the transition of patients returning to the community upon discharge and prevent re-entry into the hospital ; 3) strong day treatment programs at community mental health centers; 4) supported housing units; 5) stable adult foster and mental health group homes. 6) Home and Community-Based SDMI Waiver programs; 7) active, local drop-in centers, 8) other psychiatric inpatient units.
6	The decrease in the average LOS for adults discharged from the State Hospital in FY12 may be due to the greater number of community options available for stabilization and placement, such as Home and Community Based SDMI Waiver program, adult foster homes, mental health group homes, and the many mental health service providers working together to reduce inpatient days.
6	The increase in the average LOS for adults in the State Hospital for <1 year may be attributed to the influence of 3 forensic inpatients, each with an LOS of over 11 months by the end of FY12.
6	The decrease in the total number of admissions to Community Programs during the year is primarily the result of using a different method to calculate the number of consumers served in community programs at the beginning of the year (in which we counted clients who were served both in the last three months of the previous fiscal year and also at any time in FY12, resulting in a higher number of clients served in community programs at the beginning of FY12) and fewer admitted during the year.
8	The large decrease in expenditures for Non-Direct Service Activities for the MHBG between FY11 and FY12 is due to accounting adjustments that average out to be \$36,216 for non-direct expenses for both FY11 and FY12.
12	The percent of persons with Co-Occurring Mental Health and Substance Abuse decreased by 2% for both adults and children between FY11 and FY12 due to only counting active substance abuse diagnoses in FY12.
14A	The increase in the number of multi-racial youth is due to the increase in the number of consumers under age 18 between FY11 and FY12.
15	The increase in the number of institutionalized clients between FY11 and FY12 is due to including institutionalized SDMI clients in Table 15 due to attaining greater access to institutional data, and to categorizing some previous Residential Care sites as Institutional. This also explains why the number in Residential Care decreased. The number in Foster Homes decreased is due to our ability to differentiate between foster and group homes, and to differentiate between foster care and family care (in which the child stays in their own family but the family receives services to help them learn more effective parenting skills).
16	The increase in the total number of children with SED is due to including youth whose only mental health service in FY12 was Comprehensive School and Community Treatment (CSCT). These youth were not included in prior years due to a misinterpretation of the funding source for this contracted service. It was determined that it was appropriate to include these youth among those served by the SMHA from FY12 forward.
21	The decrease in the percent re-admitted to any psych inpatient unit within both 30 days and 180 days can most likely be explained by expanded services and increased usage of those services, including: 1) short-term crisis stabilization facilities; 2) community liaison officers of both genders whose job is to ease the transition of patients returning to the community upon discharge and prevent re-entry into the hospital; 3) strong day treatment programs at community mental health centers; 4) supported housing units; 5) stable adult foster and mental health group homes. 6) Home and Community-Based SDMI Waiver programs; 7) active, local drop-in centers.
