Delaware

URS Table Number	General Notes
3	Total number of consumers served in Community mental health programs is greater than total number of consumers served (Table 2A Total) because children's data reported on table 3 are duplicated. For adults, the numbers reported in Table 3 are unduplicated and the sum of total consumers served in Community mental health programs, total state psychiatric hospitals, total other psychiatric inpatient and total residential treatment centers equals the total in Table 2A.
3	The decrease in total number of consumers served in State Psychiatric Hospitals from FY13 to FY12 is due to USDOJ mandate that service to State Hospital should be reduced; this has resulted in closure of treatment units in DPC which has reduced services.
4	The decreases in total number of consumers' unemployed and total number of consumers unemployed are due to Delaware moved from the CCCP treatment plan to ACT/ICM treatment model which co-insides with USDOJ mandate for Delaware. This has resulted in clients being transferred to new treatment facilities which has reduced the number of updates received.
4	Total employment number in Table 4 is not equal total number of adults served in community settings reported on Table 3 because some of the adults in the 18-20 age category have come from the Children's data. Employment data for them was not collected.
6	The decreases in total Number of Consumers Served in Other Psychiatric Inpatient Settings at the beginning of the year, Total Admissions to Other Psychiatric Inpatient During the Year, Average LOS of adults discharged from State Hospitals and the decrease in Total Admissions to State Hospital During the Year are due to USDOJ mandate that service to State Hospital should be reduced; this has resulted in closure of treatment units in DPC which has reduced admissions and more discharges to other treatment facilities. This measure has also resulted in more clients being served in Private Hospitals.
8	The 27% decrease in Total MHBG Expenditures for Non-Direct Service Activities from FY13 to FY12 is due to the percentage of 2013 funds spent on non-direct service activities is on par with the spending proportion for 2012.
9,11a	The number of Children/Adolescents Responding Positively about Functioning is not equal to the Total Number of Children/Adolescents Responding Positively about Functioning in Table 9 and The total number of Child/Adolescent Responses to Functioning is not equal to the Total Number of Child/Adolescent Responses to Functioning in Table 9 because we do not have a Race/Ethnicity breakdown of the respondents in Table 9 to complete Table 11 details. Children have never broken down Table 11a in these categories.
12	The increase in Percent of children served by the SMHA with co-occurring MH/SA diagnoses from FY13 to FY12 is due to an increase in number of children diagnosed with co-occurring MH/SA diagnosis.
15	The decreases in total number of consumers living in Private Residence and homeless shelter are due to the data is captures from the client's Annual treatment update. Delaware moved from the CCCP treatment plan to ACT/ICM treatment model which co-insides with USDOJ mandate for Delaware. This has resulted in clients being transferred to new treatment facilities which has reduced the number of updates received.
15A	Total number of consumers served in Community mental health programs is greater than total number of consumers served (Table 2A Total) is due to the children's numbers in Table 15a are duplicated.
16	The decreases in Total number of consumers receiving Supported Housing services, total number of consumers receiving Supported Employment services and Total number of consumers receiving ACT services are due to the data is captures from the client's Annual treatment update. Delaware moved from the CCCP treatment plan to ACT/ICM treatment model which co-insides with USDOJ mandate for Delaware. This has resulted in clients being transferred to new treatment facilities which has reduced the number of updates received.
17	The increases in Total number of consumers receiving integrated Dual Dx services and Total number of consumers receiving illness Self Management services are due to the data is captures from the client's Annual treatment update. Delaware moved from the CCCP treatment plan to ACT/ICM treatment model which co-insides with USDOJ mandate for Delaware. This has resulted in clients being transferred to new treatment facilities which has reduced the number of updates received.
19	The overall methodology and datasets used for determining the Adult numbers was similar to that used in 2012. However, one important difference was that, for 2013, we have information on unique number of clients in the DSAMH database, whereas in 2012 this information was not available. Therefore, the denominator used for calculating the proportion of DSAMH clients with CJ activity in Fiscal year 2013 is smaller than that used in 2012.
20	This treatment data is controlled by the Justice System of Delaware
21	The increases in Total percent readmitted within 30 days and 180 days from FY13 to FY12 are due to the Clients discharged are being readmitted mostly on short terms basis in other inpatient facilities.
