URS Table Number	General Notes
2A/5A	The differences between tables 2 & 5 are likely due to the where the data is being pulled from this past year. In looking at the variation, the overall impact is less than 1% variation which is minimal. This is something in the future we hope to address with all our data pulls from the Business Objects Warehouse.
5A/5B	It is unknown why the counts do not align between table 5A/B. The reports have been used for the past 3 years without this issue; a support ticket has been filed with our contractor. Source: SSRS which does not have an interface to Medicaid eligibility system.
6	Data integrity issue identified and addressed, numbers reported reflect accurate categorical counts however, the combined averages were not possible to calculate for LOS Discharged Patients and for Clients in Facility for 1 Year or Less: Average Length of Stay (in Days): Residents at end of year.
6	Children's inpatient is currently covered through the Medicaid. Low number of youth in residential care will results in large percent changes from year to year.
10	Compiled from fiscal reports. 9300 report & contracts data.
12	The percentages of children/adolescents and adults served by the SMHA who also have a diagnosis of substance abuse problem are not available.
16	Contracted services do not include breakdown of clients by age, race, gender or ethnicity. Total unduplicated Number of Adults with SMI served were counted from the DIG extract, age not available are individuals whose age is outside of the options currently available on the table.
16	Multiple data sources are used to populate this table: contractor data, SSRS report, DIG extract, CMH Core Services Tables.
17	Compiled from SSRS extract.
21	Readmission data calculated from claims paid under Community Hospitalization data which resides outside of the EHR, gender, age, race and ethnicity are not included in the claims file. Idaho intends to automate this report using SSRS in the coming year to address this issue.
