Kansas

URS Table Number	General Notes
4/4A	Employment status is collected for all KS adult mental health consumers at admission. Monthly updates to employment status are collected for adults with SPMI while they are receiving specialized services. Totals represent the employment status of consumers admitted or updated during FY13.
3	A comparison of consumers served in State Psychiatric Hospitals during FY13 and FY12 indicates a 28% increase. This is due to incomplete information provided for the FY12 report. The actual number of consumers served during FY12 was 3,778. Although this represents an actual increase of 5% from FY12 to FY13, the 3,965 consumers served during FY13 remains below the average number of consumers served during the previous 3 years (3,974).
6	By the end of fiscal year 2010, Kansas no longer operated state hospitals for children/youth under age 18. Kansas KDADS/Behavioral Health has contracted with KVC Behavioral Healthcare to provide inpatient treatment of children and adolescents who would have otherwise been referred to a state mental health hospital. Treatment responsibilities for this population were transferred prior to FY2013.
8	The increase in MHBG Expenditures for Non-Direct Service Activities for FY13 is primarily attributed to a significant decrease in MHA Administration expenditures for personnel reported for FY12. The 4 year average MHBG Expenditures for Non-Direct Service Activities in Kansas is \$127618. We anticipate FY14 expenditures will be near this average.
9, 11	The Kansas Department for Aging and Disability Services (formerly Social and Rehabilitation Services) contracted with the Kansas Foundation for Medical Care, Inc. (KFMC) to conduct the 2013 Kansas Medicaid Mental Health Consumer Satisfaction Surveys for Kansas Health Solutions (KHS) members. In conducting the surveys, KFMC used the Centers for Medicare & Medicaid Services (CMS) "Administering Surveys" protocol and worksheet. The Mental Health Statistics Improvement Program (MHSIP) Youth Services Survey (YSS), Youth Services Survey for Families (YSS-F) and Adult Consumer Survey tools were selected for use in the project. Confidence levels: because the agreement rates tended to be high and many of the denominators were below 100, the "Exact Method" (also known as the Clopper-Pearson method) was used.
12	An inaccurate calculation was used to provide the Percentage of adults meeting Federal definition of SMI during FY12. The correct percentage for FY12 should have been 18.1%. This compares to 18.2% calculated for FY13.
12	Inaccurate information was provided for the Percentage of adults served by the SMHA who also have a diagnosis of substance abuse problem during FY12. The correct percentage for FY12 should have been 17.4%. This compares to 16.3% calculated for FY13 for the same population.
12	Although the percent of change appears significant between FY12 and FY13 when rounded, the Percent of children served by the SMHA with co-occurring MH/SA diagnoses during FY12 was actually 1.5% (rounded to 2.0%) compared to 1.3% for FY13 (rounded to 1.0%).
15	Living situation is collected for all KS mental health consumers at admission. Monthly updates to living situation are collected only for adults with SPMI and children with SED while they are receiving specialized services.
16	The numbers reported for Supported Employment represent those consumers that have received services based on broadly defined federal guidelines. Kansas collects data on a subset of the population receiving Supported Employment Services from CMHC staff trained using the Dartmouth toolkit and monitored for fidelity through a contract between SRS/Mental Health and the University of Kansas. For FY2013, there were 736 adults with SPMI who received Supported Employment Services following this monitoring protocol.
16	The 24% reduction in the total number of consumers receiving Therapeutic Foster Care services compared to the same population during FY12 is due to the relatively low number of youth that are receiving these services.
17	The numbers reported for Integrated Treatment for Co-occurring Disorders (MH/SA) represent those adult consumers that have received services based on broadly defined federal guidelines. Kansas collects data on a subset of the population receiving Integrated Treatment for Co-occurring Disorders from CMHC staff trained using the Dartmouth toolkit and monitored for fidelity through a contract between SRS/Mental Health and the University of Kansas. For FY2013, there were 1,109 adults with SPMI who received Integrated Treatment for Co-occurring Disorders following this monitoring protocol.
