Note:

Admission Rate= number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS/DIG Table 3.

This table uses data from URS/DIG Table3 and 6.

Table 3 State Notes:

Age None
 Overall See General Notes
 Gender None

Table 6 State Notes:

Hospital We have admission and discharge dates so the administrative rule is not used for this data set. We are able to use data directly from the State Hospital's billing package instead of past year's data which was a custom extract.

Other Inpatient We have admission and discharge dates so the administrative rule is not used for this data set. This year's data includes any service that the client received, rather than 2012 which only used the first service.

Residential We have admission and discharge dates so the administrative rule is not used for this data set. This year's data includes any service that the client received, rather than 2012 which only used the first service.

Community We do not have admission data or discharges dates, so the administrative rule of 90 days without a service constitutes a discharge is used. This year's data includes any service that the client received, rather than 2012 which only used the first service.

Overall This year's data uses all mental health services a client received as we have expanded our database to include not just the first service a client received.

Western MH Services	699 Farmhouse Lane, Bozeman, MT 59715	Gallatin Cty empl services/drop-in ctr grant	\$220,052	\$0

Montana

URS Table Number	General Notes
3	The increase in total number of consumers served in Community MH Programs is due to community MH programs was calculated using a different mapping of provider types to service setting than in past years.
4	The increases in total number of consumers employed, total number of consumers unemployed and total number of consumers not in labor force are due to in past years Montana only used data from a "Recovery Marker" application. Now we use both "Performance Indicators" and "Recovery Markers" which provides a more complete and accurate data set.
4A	Tables 4 and 4a totals are slightly off because we are calculating the most common diagnosis as the primary diagnosis, and that is sometimes duplicated for a client.
5A	Data is based solely on mental health services data, and does not include any other data outside of that set. Encounter data was included this year: it was missing in past years.
12	We do not provide the data for percent of adults and children served by the SMHA with co-occurring MH/SA diagnoses this year is due to our data only include claims made with mental health services rendered. In past years a second set of data was included that added substance abuse services received any time during the year.
14	Past years did not have the ability to correctly calculate multi-racial people. We now correctly classify people with diverse racial heritage.
15	The decrease in total number of consumers living in Private Residence and increase in total number of consumers Homeless/shelter because Montana is enhancing our data validation, much of our population does not have data reported this year. This also means that past years data does not correlate with this year's data. Future years will build on the validated data.
16	The increase in Supported Housing is due to we use both recovery markers and performance indicators to provide a more comprehensive data set that can be matched with or client population. This increased the number of people receiving supported housing services. The decrease in supported employment service is due to during our reconciliation of two systems recording supported employment, many of the records were found to be invalid. We had to use the most recent assessment, rather than having duplicated data as we did in previous years. The decrease in total number of consumers receiving ACT service is due to the number of PACT teams was reduced this year, so Montana provided fewer clients with ACT. The decrease in total number for consumers receiving Therapeutic Foster Care services are due to Therapeutic Foster Care does not include Therapeutic Youth Group Home as it has in past years.
17	The decrease in total number of consumers receiving Illness Self-Management services is due to past years incorrectly included data.
