Note:

Admission Rate= number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS/DIG Table 3.

This table uses data from URS/DIG Table3 and 6.

Table 3 State Notes:

Age None
 Overall During the course of an inpatient stay, an individual may be transferred to another facility. The facility where the initial admission occurred is used to determine the service setting.
 Gender None

Table 6 State Notes:

West Virginia

URS Table Number	General Notes
All	There has been a change in methodology that impacts the client count for community services. The previous methodology included duplication in count for individuals seen by more than one community agency. Also included in the count in previous years were all individuals who had an outstanding service authorization in the reporting period regardless of whether or not they received services. As the client level database was developed, BHHF was able to identify only those individuals actually to receive services from community providers during the reporting period as well as remove the duplication across providers. BBHBF has also continued to aggressively identify those individuals who appeared in the database with multiple client identifiers. As these records were merged, the client count would decrease accordingly.
All	Because of the change in methodology for community services, a comparison to prior years is not possible. The methodology for inpatient services is unchanged from the previous year.
2a	For Race/Ethnicity: an individual may select more than one race category. If one initially selects only one race and, subsequently, selects a different race; they are considered as having chosen more than one race. If more than one race is selected at any time, they will always be reported as more than one race. In previous years, the last reported race was used when more than one race had been reported.
4	At the beginning of FY13 BHHF increased the verification of additional fields. Among them is employment status. In prior years the number of responses for whom this field was not completed was about 50% of the total response. By increasing the verification total no responses declined to about 10%.
4 & 15	WV has not been able to complete the client level data. Tables 4 and 15 are based upon the data tables available at the time the URS was completed. There may be a considerable difference between the numbers reported on Tables 4 and 15 from FY12 to previous years.
5A	The decrease in consumers with both Medicaid and non-Medicaid from FY12 is due to the increase of the number of people with an unknown payer source.
4, 9, 11, 11a, 19a & 19b	These tables were not completed or only partially completed depending on the availability of data. No Adult MH Satisfaction survey was conducted during FY13. BBHBF is attempting to identify an acceptable vendor to conduct the survey.
16	Beginning in FY12 a major change in the way in which the number of people receiving supported housing is reported. In previous years count was of individuals receiving supported housing at a location BBHBF provided funding. Beginning with FY12 the count is of all individuals receiving supported housing regardless of payer source.
19a & 19b	Data reporting requirements have been expanded to include new data elements needed to complete these tables beginning January 2013. Data reporting is incomplete and not available for FY13 reporting.
