Idaho

URS Table Number	General Notes
2A, 2B, 3, 4, 4A, 14A, 14B, 15, 15A	These tables were populated by NRI using Idaho's 2014 MH-CLD BCI production file
2A	The increase in the total numbers of consumers served from 2013 to 2014 was caused by addition of a new population of individuals being added to the Divisions workload. In Idaho we have a role in screening felony offenders prior to sentencing. This is resulting in many more 'clients' coming into our system, however they are often awaiting sentencing and we do not actually meet with them. Instead we perform an administrative review of their GRRS and make recommendations accordingly. These cases only have a profile, intake, and court monitoring record. Many of the demographics are either unknown or are contained in a section of the EHR not being used by the team. This process started 1.5 years ago, however last year was the first full year of operation. Idaho points to the client count change as evidence of this new population and function being performed by the Division of Behavioral Health.
3	Number of consumers served in Community MH programs increased (from 2013) due to the changes outlined in response for Table 2A. Number of State Psychiatric Hospitalization consumers has increased due to shorter hospital stays and remaining at full census has contributed to this trend.
4	Total number of consumers Not In Labor Force increased from 2013 because workforce data is contained within a section of the EHR (assessment, admission and discharge) that is not being accessed for the new client population mentioned in 2A.
5A	The increase in the total number of consumers by funding status was caused by addition of a new population of individuals being added to the Divisions workload. In Idaho we have a role in screening felony offenders prior to sentencing. This is resulting in many more 'clients' coming into our system, however they often awaiting sentencing and we do not actually meet with them. Instead we perform an administrative review of their GRRS and make recommendations accordingly. These cases only have a profile, intake and court monitoring record. Many of the demographics are either unknown or are contained in a section of the EHR not being used by the team. This process started 1.5 years ago, however last year was the first full year of operation. I would point to the client count change as evidence of this new population and function being performed by the Division of Behavioral Health.
5A/5B	It is unknown why the counts do not align between table 5A/B. We believe the issue occurs when staff enters a race or ethnicity and the profile is later merged with an existing client; this de-duplication of ID creates a single client that could occur in multiple boxes. It is rare and likely a consequence of data clean-up efforts. Given the low number of occurrences, no corrections are anticipated. Source: SSRS which does not have an interface to Medicaid eligibility system.
6	Data integrity issue identified and addressed, numbers reported reflect accurate categorical counts, however, the combined averages were not possible to calculate State Hospitals and Residential Treatment Centers' LOS data.
6	Children's inpatient is currently covered through Medicaid. Low number of youth in residential care will results in large percent changes from year to year.
8	Compiled from fiscal reports, 5% MHA administration.
9 & 11	The increase in percent of adults reporting positively about Social Connectedness and decreases in percent of children/adolescents reporting positively about Social Connectedness and Percent of children/adolescents reporting positively about Functioning are likely due to effect of a low N value for the sample. Additionally, there was a shift in reported outcomes from the survey indicating an opportunity to engage consumers in our quality assurance and improvement process more.
10	Compiled from contracts data.
11A	Race/Ethnicity are collected as a two part question. Recommend adding an 11B to capture ethnicity of respondents.
12	The percentages of children/adolescents and adults served by the SMHA who also have a diagnosis of substance abuse problem are not available.

URS Table Number	General Notes
16	Contracted services do not include breakdown of clients by age, race, gender or ethnicity. Adults with SMI served & Children with SED were counted from the DIG extract, Age not available are individuals whose age is outside of the options currently available on the table.
16	Multiple data sources are used to populate this table: contractor data, SSRS report, DIG extract, CMH Core Services Tables.
17	Compiled from SSRS extract.
17	The increase in Total number of consumers receiving Integrated Dual Diagnoses services and Medication Management services can be explained: Medication management services remain a critical need in Idaho. We have increased our capacity for this program by decreasing some of the administrative reporting requirements (i.e. treatment plans are updated as needed, not every 120 days).
19A/19B	State has elected to report arrest data/school attendance data through the Mental Health Client-Level Data Reporting.
21	Readmission data calculated from claims paid under Community Hospitalization data which resides outside of the EHR. Gender, age, race and ethnicity are not included in the claims file.
