### Note:

- **Are Client Counts Unduplicated?**
  - Duplicated across Community, RPTC, and Hospital/Other Inpatient. See General Notes.
  - Duplicated between Hospitals and Community

This table uses data from URS Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2017.

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA’s Block Grant Regions.

### State Notes:

#### Table 2a

- **Age**
  - Age is assigned as of middle of the reporting period: for SFY 2018, age as of Dec 31, 2017. There are 37 adults with Age = ‘not available’ that are clients who received Illness Self-Management (ISM) services in Community-based setting.

- **Gender**
  - None

- **Race**
  - See General Notes

- **Overall**
  - See General Note. Community client counts include ISM clients: SFY18 Total ISM = 1,746 (1,723 adults and 23 youth); SED/SMI ISM = 1,729 (1,708 adult and 21 youth). 37 adult ISM clients have Age = ‘not available’.

#### Table 2b

- **Age**
  - Age is assigned as of middle of the reporting period: for SFY 2018, age as of Dec 31, 2017. There are 37 adults with Age = ‘not available’ that are clients who received Illness Self-Management (ISM) services in Community-based setting.

- **Gender**
  - None

- **Race**
  - See General Notes

- **Overall**
  - See General Note. Community client counts include ISM clients: SFY18 Total ISM = 1,746 (1,723 adults and 23 youth); SED/SMI ISM = 1,729 (1,708 adult and 21 youth). 37 adult ISM clients have Age = ‘not available’.

### Note:

- This table uses data from URS Table 14a, Table 14b and from the US Census Bureau. All denominators use US Census data from 2017.
- US totals are calculated uniquely for each data element based on only those states who reported clients served.
- Regional groupings are based on SAMHSA’s Block Grant Regions.

### State Notes:

**Table 14a**

- **Age**: Age is assigned as of middle of the reporting period: for SFY 2018, age as of Dec 31, 2017. There are 37 adults with Age = ‘not available’ that are clients who received Illness Self-Management (ISM) services in Community-based setting.
- **Gender**: None
- **Race**: See General Note
- **Overall**: See General Note. Community client counts include ISM clients: SFY18 Total ISM = 1,746 (1,723 adults and 23 youth); SED/SMI ISM = 1,729 (1,708 adult and 21 youth). 37 adult ISM clients have Age = ‘not available’.

**Table 14b**

- **Age**: Age is assigned as of middle of the reporting period: for SFY 2018, age as of Dec 31, 2017. There are 37 adults with Age = ‘not available’ that are clients who received Illness Self-Management (ISM) services in Community-based setting.
- **Gender**: None
- **Race**: See General Note
- **Overall**: See General Note. Community client counts include ISM clients: SFY18 Total ISM = 1,746 (1,723 adults and 23 youth); SED/SMI ISM = 1,729 (1,708 adult and 21 youth). 37 adult ISM clients have Age = ‘not available’.

<td>6.2%</td>
<td>7.3%</td>
<td>3.0%</td>
<td>52</td>
</tr>
</tbody>
</table>

Note
This table uses data from URS Table 12.

How are the number of clients with co-occurring disorders counted and calculated?
Percentage of clients served by the SMHA for the reporting period with dual diagnosis of mental illness and substance abuse was calculated by specified age population divided by total age population. Percentage of clients served for the reporting period who met the Federal definitions of adults with SMI and children/adolescents with SED with dual diagnosis of mental illness and substance abuse was calculated by specified age population with SMI/SED divided by total age population with SMI/SED.

State Notes
See general Notes. API (Alaska Psychiatric Hospital) provides services to individuals ages 13 and older.

### Note:

Admission Rate = number of admissions divided by total served during the year

US Admissions During Year uses data from states reporting data only. States are only included in “US Total Served” if they also reported data on admissions.

US Total Served During Year is calculated using data in URS Table 3.

This table uses data from URS Table 3 and 6.

#### Table 3 State Notes:

- **Age**: Age is assigned as of middle of the reporting period: for SFY 2018, age as of Dec 31, 2017. There are 37 adults with Age = ‘not available’ that are clients who received Illness Self-Management (ISM) services in Community-based setting.
- **Overall**: Community client counts include ISM clients: SFY18 Total ISM = 1,746 (1,723 adults and 23 youth); SED/SMI ISM = 1,729 (1,708 adult and 21 youth). 37 adult ISM clients have Age = ‘not available’.
- **Gender**: None

#### Table 6 State Notes:

- **Hospital**: Used age at Admission. Data is inclusive of all patients, including civil and forensic. See General Notes.
- **Other Inpatient**: Used age at Admission. Excludes DET. See General Notes.
- **Residential**: Used age at Admission. See General Notes.
- **Community**: Total Served at Year Begin: Age is assigned as of middle of the reporting period: for SFY 2018, age as of December 31, 2017. Admissions During Year: used age at Admission. See General Notes.
- **Overall**: See General Notes

General Notes FY 2018

Alaska

<table>
<thead>
<tr>
<th>URS Table Number</th>
<th>General Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td>Reporting year is State Fiscal Year (SFY) 2018, except for Consumer Survey Tables; for these tables, the survey period is during CY 2017.</td>
</tr>
<tr>
<td>All</td>
<td>Community Programs: The Division uses an electronic health records system (the Alaska Automated Information Management System (AKAIMS)) to collect and report Community Program data. However, AKAIMS does not include information on youth or adults who receive illness self-management (ISM) services. Starting in SFY12, the number of individuals who received ISM services (based on grantee quarterly reports) was added to the AKAIMS counts for the total number individuals who received services. Due to this change in methodology, caution should be exercised when making comparisons with prior year data. The Division has improved data collection and reporting of demographic information for clients receiving ISM services; however, many of these clients are still included in the “Not Available” category for age, gender, race, ethnicity, employment status, and living situation. The AKAIMS client counts are unduplicated counts of “clients served” and reflect the number of clients who received services through program enrollment. These counts do not include clients who received a mental health service but were not enrolled in a program. Starting in SFY15, the AKAIMS counts of persons served reflect unduplicated client counts within and across agencies; prior year counts were unduplicated at the agency level, but duplicated across agencies if a client received services from more than one agency. Starting in SFY16, all ISM client counts generally reflect unduplicated client counts for each agency (note: there may be duplication across agencies). Over time, from SFY12 to SFY16, the agencies that report ISM client counts implemented improvements in their reporting methodology; the reported client counts reflect these changes in addition to changes in service delivery. Due to the changes in AKAIMS and ISM reporting methodology, caution is advised when making comparisons over time. Several of the state's larger sub-grantees are in the process of implementing a new electronic health record system. As such the client's counts for those grantees may not be accurate and likely reflect only a subset of the total clients served in those agencies. At this point it is impossible to tell how many clients may be missing but the division anticipates the SFY 2019 report to include the full population of people served due to the implementation of the reporting database through the state’s health information exchange.</td>
</tr>
<tr>
<td>All</td>
<td>State Psych Hospital: the state of Alaska is in the midst of a psychiatric bed crisis. The Alaska Psychiatric Institute, the state’s sole state psychiatric hospital, has experienced significant challenges throughout this state fiscal year. Staff shortages (especially for nursing staff), as well as multiple plans of correction from federal partners and accreditation bodies have posed a significant challenge. In FY2018 the average daily census was just 64 out of a total capacity of 80 beds. Staff shortages have also led to several high-profile incidents that have detracted from the core mission of API including 403 patient assaults on staff resulting in 16 staff injuries that required at least some medical intervention in FY2018. Decreased bed capacity at the Alaska Psychiatric Institute creates a bottleneck for the entire mental-health care system as patients are being housed in Hospital emergency departments and other inappropriate settings while they await bed availability. Department of Health and Social Services Commissioner Davidson activated the DHSS Emergency Operations Center (EOC) on October 13, 2018 in order to solve this problem. Some strategies being pursued are: increases to nurse salaries to increase nurse recruitment and retention. API must hire 102 new nurses to operate its 80 beds; contracting with NorthStar Behavioral Health to utilize their bed capacity until API can be fully staffed; ensuring emergency departments have access to patient care plans and can refer appropriately; emergency regulation changes to ensure hospitals are being compensated for Medicaid Patients in their emergency departments while they await available beds at API; Crisis Stabilization Center: contract with a vendor to stand up and manage a Crisis Stabilization Center in Anchorage; feasibility study to construct a new forensic hospital; designation of new facilities to take involuntarily committed patients. The Division is working tirelessly and expending significant resources to solve this problem and as such, significant departmental resources have been reallocated to aid in that effort. Due to resources being pulled into the EOC, the state is only able to report on state psychiatric hospital data that has been processed through Medicaid (i.e. a subset of the total population for the year). Once this crisis passes and research staff are allowed to return to their day-to-day job, this data will be pulled for SAMHSA.</td>
</tr>
</tbody>
</table>
### URS Table Number

**Number**

<table>
<thead>
<tr>
<th>All</th>
<th>General Notes</th>
<th><strong>URS Table</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>All</td>
<td>Other Psychiatric Inpatient: this includes Designated Evaluation &amp; Treatment (DET) and Acute Psychiatric. (1) DET – High Risk Inpatient Psychiatric Diversion from API. Data is collected and tracked through Excel. The SFY 2018 URS Tables include the DET data for clients that had an inpatient stay at a DET facility (client count is based on paid claims only). The reduction between FY 2015 and FY 2018 is mostly due to Medicaid expansion, and it is likely that clients whose inpatient acute psychiatric hospital stays were formerly paid for with DET/DES funding, were covered under Medicaid expansion, which was implemented September 1, 2015. (2) Acute Psychiatric: data is from the MMIS-Cognos Decision Support System (Medicaid claims data). Includes in- and out-of-state clients. The unduplicated client count is based on paid Medicaid claims. (3) RPTC: data is from the MMIS-Cognos Decision Support System (Medicaid claims data). Includes in- and out-of-state clients. The unduplicated client count is based on paid Medicaid claims.</td>
<td></td>
</tr>
<tr>
<td>All</td>
<td>Age – Client Counts: for community program client counts, age is assigned as of the middle of the reporting period (SFY 2018 = Age as of December 31, 2017). For API, Other Psych Inpatient, and RPTC client counts (except those in Table 6), age is assigned as of the middle of the reporting period; the Table 6 client counts have age (child vs adult) assigned as of the date of admission. Age – admissions/discharges: for all admission and discharge counts, age is assigned as of the date of admission.</td>
<td></td>
</tr>
<tr>
<td>All</td>
<td>Race/Ethnicity: for community programs, Acute Psych, and RPTCs, 'Hispanic' data is collected separately from 'Race' data (i.e., two separate questions); for API, 'Hispanic' was collected as part of the 'Race' question; and for DET, limited 'Race' and 'Hispanic' data was collected. For consistency in reporting in the URS Tables, the balance were assigned an Ethnicity of 'Hispanic Origin Not Available.' All of the DET counts were assigned an Ethnicity of 'Hispanic Origin Not Available.'</td>
<td></td>
</tr>
<tr>
<td>3, 6</td>
<td>Due to changes with Alaska Psychiatric Institute, Alaska was only able to access state psychiatric hospital data for SFY2018 that had been processed through Medicaid (i.e., a subset of the total state psychiatric hospital population for that year); since the data were incomplete, Alaska is not reporting state psychiatric hospital data for SFY2018, and thus state psychiatric hospital data does not appear in URS Tables 3 or 6.</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Employment Status: starting in SFY14, the methodology for reporting the most recent employment status changed from using the AKAIMS Admission/Discharge data to the Client Status Review (CSR) data. The CSR is administered at admission, periodically during treatment (every 90-135 days), and at discharge.</td>
<td></td>
</tr>
<tr>
<td>4/4A, 14A/B, 15</td>
<td>Several of the state’s larger sub-grantees are in the process of implementing a new electronic health record system. As such the client’s counts for those grantees are not be accurate and likely reflect only a subset of the total clients served in those agencies. At this point it is impossible to tell how many clients may be missing but the division anticipates the SFY 2019 report to include the full population of people served due to the implementation of the reporting database through the state’s health information exchange.</td>
<td></td>
</tr>
<tr>
<td>5A/B</td>
<td>Funding Support – Medicaid Status: for consistency in reporting across service settings, the rows reflect 'Primary Expected Payment Source' = Medicaid or Non-Medicaid. We are not able to identify clients with Medicaid Only, Non-Medicaid Only, or both Medicaid and Non-Medicaid. For most clients, we are able to determine if their primary expected payment source is Medicaid or Non-Medicaid. In the row labeled &quot;Medicaid Only&quot; we are reporting the number of clients with &quot;Primary Expected Payment Source = Medicaid&quot; and in the row labeled &quot;Non-Medicaid Only&quot; we are reporting the number of clients with &quot;Primary Expected Payment Source = Non-Medicaid&quot;. We used the following methodology for each service setting: for community programs: in AKAIMS, the primary expected payment source is collected. If the client's primary expected payment source is Medicaid, then the client is counted under &quot;Medicaid Only&quot;; if the client's primary expected payment source is not Medicaid, then the client is counted under &quot;Non-Medicaid Only&quot;. Starting in SFY 2013, the clients receiving ISM services are counted under &quot;Non-Medicaid Only&quot; because clients are not charged for these services (note: in SFY 2012, clients receiving ISM services were counted under &quot;Medicaid Status Unknown&quot;). For state psychiatric hospital (API): for this reporting cycle, only clients with an excepted payment source of Medicaid were available. Data is from the MMIS-Cognos Decision Support System (Medicaid claims data); the assumption is made that the primary expected payment source for all clients is Medicaid, so all clients are counted under &quot;Medicaid Only&quot;. For RPTCs and Acute Psych: data is from the MMIS-Cognos Decision Support System (Medicaid claims data); the assumption is made that the primary expected payment source for all clients is Medicaid, so all clients are counted under &quot;Medicaid Only&quot;. For DET: the primary expected payment source is not Medicaid; all DET clients are counted under &quot;Non-Medicaid Only&quot;.</td>
<td></td>
</tr>
<tr>
<td>URS Table Number</td>
<td>General Notes</td>
<td></td>
</tr>
<tr>
<td>------------------</td>
<td>--------------</td>
<td></td>
</tr>
<tr>
<td>5A/B</td>
<td>The Division of Public Assistance (Medicaid eligibility division) has experienced a severe eligibility backlog. Medicaid expansion added 40,000 Alaskans to the Medicaid program, and another 40,000 Alaskans have joined the program associated with the non-expansion population (due to the current oil price collapse and subsequent recession). The division that handles eligibility has struggled to keep up. Currently there is an ongoing backlog of 12,000 applications in process. That division has received approval to hire 41 new positions but has only been able to fill four. Overtime is being approved liberally and the division is seeking salary increases for public assistance technicians to assist with recruitment and retention. Our “expected payment source” records are entered at the time of service but not updated regularly. Many of those listed in the “non-Medicaid funding only” category will eventually be paid through Medicaid once their application is processed. In short, Medicaid enrollees are increasing due to expansion but they are being captured in these figures as “non-Medicaid” due to the eligibility backlog.</td>
<td></td>
</tr>
<tr>
<td>7</td>
<td>Total MHBG Expenditures - 2017 was our first year of awarding the First Episode Psychosis grants. As such, in the first year, our sole grantee was only able to spend a portion of their grant as they set up the program. Total Other Federal Funds Expenditures - Various new SAMHSA grants were awarded this year including the STR and MAT-PDOA grants. Total Other Expenditures - staffing shortages at the psychiatric hospital. Two units are inoperable. Total EPB for ESMI Expenditures - 2017 was our first year of awarding the First Episode Psychosis grants. As such, in the first year, our sole grantee was only able to spend a portion of their grant as they set up the program.</td>
<td></td>
</tr>
<tr>
<td>7A</td>
<td>Table 7A: 2017 was our first year of awarding the First Episode Psychosis grants. As such, in the first year we were only able to realize a partial year of funding.</td>
<td></td>
</tr>
<tr>
<td>12</td>
<td>Percentage of Persons Served who have a Dual Diagnosis (Co-Occurring Mental Health and Substance Abuse): we are not yet able to report the count or percentage of clients who have a dual diagnosis. For community-based services, we are able to report counts and percentages of clients who are “treated for co-occurring disorders”. The count of clients treated for co-occurring disorders is based on the client’s admission record program type assignment of “Treating here for Both Mental Health &amp; Substance Abuse”. Starting in SFY 2015, the number of clients “Treated for Co-Occurring Disorders” includes persons with co-occurring disorders who received ISM services. In SFY 2016, the agency that reports the ISM co-occurring client count made some improvements in their methodology to obtain an unduplicated client count; this change in methodology resulted in a significantly lower client count. The SFY16 decrease in the percentage of clients treated for co-occurring disorders reflects this change.</td>
<td></td>
</tr>
<tr>
<td>15</td>
<td>Living Situation: starting in SFY 2014, for community programs, the methodology for reporting the most recent living situation changed from using the AKAIMS Admission/Discharge data to the Client Status Review (CSR) data. The CSR is administered at admission, periodically during treatment (every 90-135 days), and at discharge.</td>
<td></td>
</tr>
<tr>
<td>16</td>
<td>EBP data is reported for Community setting only. In order to split the data between the types of services (Supported Housing, Supported Employment, Assertive Community Treatment) the division has utilized a different data source (quarterly reports) that does not collect demographic information such as race, age, ethnicity, etc. For this reason, the total count of unduplicated persons served will not match those on table 14 and 14b. The Electronic Health Records System (AKAIMS) is able to pull total unduplicated clients by demographic; however, it does not track non-medical services with demographics at such a level. For instance, the 345 individuals receiving supported employment services are included in the total SMI population of 9,383; however, we do not know which of the 9,383 clients received that service, we simply know that 345 individuals were recipients of that service.</td>
<td></td>
</tr>
<tr>
<td>16</td>
<td>The drop in Therapeutic foster care can be explained by EHR issues. Several of the state’s larger sub-grantees are in the process of implementing a new electronic health record system. As such the client’s counts for those grantees are not be accurate and likely reflect only a subset of the total clients served in those agencies. At this point it is impossible to tell how many clients may be missing but the division anticipates the SFY 2019 report to include the full population of people served due to the implementation of the reporting database through the state’s health information exchange.</td>
<td></td>
</tr>
<tr>
<td>16</td>
<td>The increase in Supported Employment services is due in part to the TA given to one of our providers, Gastineau Human Services. Additional, the increase can also be attributed to working towards fidelity to the IPS model.</td>
<td></td>
</tr>
<tr>
<td>16A</td>
<td>This is a new table. There is a single grantee in this program. We are soliciting additional grantees should this pilot be successful.</td>
<td></td>
</tr>
<tr>
<td>URS Table Number</td>
<td>General Notes</td>
<td></td>
</tr>
<tr>
<td>------------------</td>
<td>--------------</td>
<td></td>
</tr>
<tr>
<td>17</td>
<td>EBP data is reported for community setting only. The Division is working to improve data collection and reporting capability relative to clients receiving EBP services. A reduction in clients served is generally associated with a single agency. During the report year, the agency identified 1) fewer clients participating in program services, and 2) an increase in intoxicated clients – as measured by a BRAC monitor – who consequently were not allowed on-site at the agency. Illness Self-Management: see notes for data sources information, limitations, and community programs.</td>
<td></td>
</tr>
<tr>
<td>21</td>
<td>May include forensic patients. The state is only able to report on non-state owned facilities where the payment source is Medicaid. In situations where the payment source is private insurance or another payer, the state does not retain data for those situations.</td>
<td></td>
</tr>
