

**Table 18.1 Marijuana Use in the Past Year, Marijuana Use in the Past Month, and Average Annual Incidence Estimates (Expressed as Percentages of the At-Risk Population) of First Use of Marijuana in Kentucky among Individuals Aged 12 or Older, by Substate Region: Percentages, Annual Averages Based on 2014, 2015, and 2016 NSDUHs**

State/Substate Region	Marijuana Use in the Past Year		Marijuana Use in the Past Month		First Use of Marijuana <sup>1</sup>	
	Estimate	95% Confidence Interval	Estimate	95% Confidence Interval	Estimate	95% Confidence Interval
<b>Kentucky</b>	12.66	(11.33 - 14.12)	7.24	(6.22 - 8.42)	1.66	(1.46 - 1.88)
Adanta, Cumberland River, and Lifeskills	11.04	(8.86 - 13.67)	6.32	(4.78 - 8.30)	1.52	(1.20 - 1.91)
Bluegrass, Comprehend, and North Key	13.82	(11.67 - 16.28)	7.67	(6.15 - 9.53)	1.69	(1.38 - 2.08)
Centerstone	14.23	(11.87 - 16.96)	8.31	(6.51 - 10.55)	2.04	(1.64 - 2.53)
Communicare and River Valley	11.46	(8.87 - 14.67)	6.72	(4.94 - 9.09)	1.55	(1.18 - 2.05)
Four Rivers and Pennyroyal	10.47	(8.02 - 13.55)	5.89	(4.27 - 8.07)	1.69	(1.29 - 2.20)
Kentucky River, Mountain, and Pathways	11.95	(9.28 - 15.26)	7.02	(5.18 - 9.44)	1.25	(0.96 - 1.62)

NOTE: For substate region definitions, see the "2014-2016 National Survey on Drug Use and Health Substate Region Definitions" at <https://www.samhsa.gov/data/>.

NOTE: Estimates along with the 95 percent Bayesian confidence (credible) intervals are based on a survey-weighted hierarchical Bayes estimation approach and generated by Markov Chain Monte Carlo techniques.

<sup>1</sup> *Average annual initiation of marijuana (%) = 100 \* {[X<sub>1</sub> ÷ (0.5 \* X<sub>1</sub> + X<sub>2</sub>)] ÷ 2}*, where X<sub>1</sub> is the number of marijuana initiates in the past 24 months and X<sub>2</sub> is the number of individuals who never used marijuana (with the at-risk population defined as 0.5 \* X<sub>1</sub> + X<sub>2</sub>). Both of the computation components, X<sub>1</sub> and X<sub>2</sub>, are based on a survey-weighted hierarchical Bayes estimation approach. The age group is based on a respondent's age at the time of the interview, not his or her age at first use. The Bayesian confidence (credible) intervals presented for Average Annual Estimates of First Use of Marijuana use a simultaneous solution for First Use of Marijuana and Never Used Marijuana outcomes, which had age group-specific random effects that were allowed to be correlated across the two outcomes. The associated Markov Chain Monte Carlo chains were used to calculate the posterior variance. For details, see Section B of the "2015-2016 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

<sup>1</sup> Mental illness is defined as having a diagnosable mental, behavioral, or emotional disorder, other than a developmental or substance use disorder, assessed by the Mental Health Surveillance Study (MHSS) *Structured Clinical Interview for the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition—Research Version—Axis I Disorders* (MHSS-SCID), which is based on the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV). Any mental illness (AMI) includes adults with any mental disorder regardless of whether their disorder resulted in functional impairment. Serious mental illness (SMI) includes adults with any mental disorder that resulted in serious functional impairment. For details, see Section B of the "2015-2016 NSDUH: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.

<sup>2</sup> Mental health services are defined as having received inpatient treatment/counseling or outpatient treatment/counseling or having used prescription medication for problems with emotions, nerves, or mental health. Respondents were not to include treatment for drug or alcohol use.

<sup>1</sup> Respondents were asked, "At any time in the past 12 months, did you seriously think about trying to kill yourself?" If they answered "Yes," they were categorized as having serious thoughts of suicide in the past year.

<sup>2</sup> Major depressive episode (MDE) is defined as in the 4th edition of the *Diagnostic and Statistical Manual of Mental Disorders* (DSM-IV), which specifies a period of at least 2 weeks when an individual experienced a depressed mood or loss of interest or pleasure in daily activities and had a majority of specified depression symptoms. For details, see Section B in the "2015-2016 National Survey on Drug Use and Health: Guide to State Tables and Summary of Small Area Estimation Methodology" at <https://www.samhsa.gov/data/>.
