General Notes FY 2018

Ohio

URS Table Number	General Notes
4, 14A/B, 15	Decreases for these tables from FY2017 may be due to a change in the rate/volume of claims submissions under statewide managed care during SFY2018.
5A	In 2017, there was a much higher number of unknowns compared to 2018. We believe that this accounts for the increase in Non-Medicaid in 2018. It may be that a higher proportion of consumers in 2017 that were identified as unknown could actually have been Non-Medicaid.
6	We used a different methodology in 2017 that was discontinued with the submission of the BCI file, which contains information regarding housing at residential treatment centers. We expected SAMHSA to calculate the residential treatment center statistic using the BCI files. We are uncertain as to what accounts for the 40% increase in the average LOS of children discharged from state hospitals. It could be that we are treating more teens (typically teens age 17) at the state hospitals.
7, 7A	Table 7, with figure of \$1,824,528 for FEP is derived from our Fiscal office's "official" fiscal data bases, all with appropriate fund source coding. Table 7A, is derived from a survey to agencies participating in this "set-aside" program and reviewed by program staff. Due to limitations of fiscal data collected by the Department, we are dependent on the survey information sent to us by the field for Table 7A which will not have the identical fund coding as our internal records. Changes from 2017 to 2018: There is a lack of standardized methodology that is contributing to difference between 2017 and 2018.
11	We do not have an explanation for the 10 point difference between 2018 and 2017. It could be an artifact of sampling. We'll have to see if the trend continues with the 2019 sample to determine if there is actually something going on in the community that we're picking up in the survey.
12	We believe the increase in the percent of adults and children served by the SMHA with co-occurring MH/SA diagnoses is due to the meddef variable not being reliable in terms of how it get reported across the treatment claims.
16	The SMD/SED numbers are based on an algorithm that uses claims. We believe that there was a decline in claims processed due to the implementation of the state's BH Redesign.
17	It is possible that the increase in consumers receiving dual diagnosis services may be a product of changes in documentation and billing coding as part system wide behavioral health redesign.
20A	We hypothesize that the reduction in 30 and 180-day readmissions to state psychiatric hospitals may be due to non-forensic clients who are diverted into community programs under court supervision upon discharge. There have been programmatic changes that can be pointed to for this decrease in readmissions and will need to see if this trend continues next year.
