General Notes FY 2018

Virginia

URS Table Number	General Notes
7	Most of the change in expenditures from FY17 is attributable to the scaling up of the Bringing Systems of Care to Scale Grant and an increasing census at our state hospitals. Expenditures for the SOC grant more than doubled from \$676,562 to \$1,599,491.92 in FY 2018 over FY 2017. Additionally, Medicare derived revenues from our hospitals increased by over \$1.0 million. The remainder of the increase was due to increases in spending associated with grant administration and other mental health federal grants spending delivered to the communities.
7	Almost all of the increase in the Other Total Expenditures (\$1.2 million) from FY17 is attributable to increases in private pay insurance collections at our state hospitals due to increases in the census.
20B	Following the tragic deaths of several individuals in jail with behavioral health needs, jail health services and community services boards emergency services staff have understandably shifted their clinical practices and risk assessments. These shifts have contributed to significantly higher rates of individuals transferred from local and regional jails for emergency treatment pending trial. Additionally, more individuals with high risk behaviors including instrumental aggression and goal directed threats of self harm are being admitted. State hospitals are running near maximum capacity with an increasing demand for inpatient hospital beds. As a result, hospitals are discharging individuals sooner, who may be lacking proper supports (which is often the case in jails) the individuals are at increased risk for readmission. To combat the issue of forensic readmissions, the Commonwealth has invested resources in bolstering the supports/services in Virginia jails. Most recently the General Assembly has tasked the Board of Corrections in consultation with DBHDS to establish minimum standards for behavioral healthcare in jails. These standards will bring some uniformity in terms of access to care and will likely raise the level of care in most jails, thus likely decreasing the need for rehospitalization.
