Note:

Are Client Counts Unduplicated? Duplicated across Community, RPTC, and Hospital/Other Inpatient. See General Notes. **Number of States with Unduplicated Counts** 43
 Duplicated between Hospitals and Community

This table uses data from URS Table 2a, Table 2b and from the US Census Bureau. All denominators use US Census data from 2018

US totals are calculated uniquely for each data element based on only those states who reported clients served.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2a

Age Age is assigned as of middle of the reporting period: for SFY 2019, age as of Dec 31, 2018. There are 131 adults with Age = N/A that are clients who received Illness Self-Management (ISM) services in Community-based setting.
 Gender None
 Race See General Notes
 Overall See General Notes. Community client counts include ISM clients: SFY19 Total ISM = 1522 (1513 adults and 9 youth). 131 adult ISM clients have Age = N/A.

Table 2b

Age Age is assigned as of middle of the reporting period: for SFY 2019, age as of Dec 31, 2018. There are 131 adults with Age = N/A that are clients who received Illness Self-Management (ISM) services in Community-based setting.
 Gender None
 Race See General Notes.
 Overall See General Notes. Community client counts include ISM clients: SFY19 Total ISM = 1522 (1513 adults and 9 youth). 131 adult ISM clients have Age = N/A.

Note:

US totals are based on states reporting.

This table uses data from URS Table 3.

US penetration rates are calculated uniquely for each data element based on only those states who reported numerator (clients served) data.

State Notes:

- Age Age is assigned as of middle of the reporting period: for SFY 2019, age as of Dec 31, 2018. There are 131 adults with Age = N/A that are clients who received Illness Self-Management (ISM) services in Community-based setting.
- Gender None
- Overall See General Notes.

When is Employment Status Measured?	At Admission	At Discharge	Monthly	Quarterly	Other
AK	Yes	Yes	-	-	Periodically during treatment
US	43	30	3	7	26

Note:

*In Labor Force is the sum of consumers employed and unemployed.

**With Known Employment Status is the sum of consumer employed, unemployed and not in labor force.

Consumers employed as a % of those in labor force uses adults employed and unemployed as the denominator.

Consumers employed as % of known employment status uses the sum of persons employed, unemployed and not in labor force as the denominator.

This table uses data from URS Table 4.

State Notes:

Age Age is assigned as of middle of the reporting period: for SFY 2018, age as of Dec 31, 2017. Age NA on table 3 are adult ISM clients age 18 and over.

Gender None

Overall See General Notes. Community client counts include ISM clients.

Outcomes Domain: Employment Status of Adult Mental Health Consumers Served in the Community by Diagnosis, FY 2019

Alaska

Reporting Period: 7/1/2018 To: 6/30/2019

Diagnosis	State				Employed as a % of Labor Force		Employed as % of Known Employment Status		% of Consumers with Dx		States Reporting
	Employed	Unemployed	In Labor Force*	With Known Employment Status**	State	US	State	US	State	US	
Schizophrenia and Related Disorders	-	-	-	-	-	30.1%	-	9.2%	-	13.5%	50
Bipolar and Mood Disorders	-	-	-	-	-	46.3%	-	22.3%	-	42.0%	50
Other Psychoses	-	-	-	-	-	30.3%	-	11.9%	-	2.2%	48
All other Diagnoses	-	-	-	-	-	53.6%	-	25.8%	-	35.3%	50

Notes:

This table uses data from URS Table 19a.

US totals are based on states reporting.

US totals are calculated uniquely for each data element based on only those states who reported numerator (clients Served) data.

State Notes:

Only a subset of the Criminal Justice questions were used on the consumer survey, so we were only able to provide counts for T2. The Child/Adolescent Consumer Survey contained a printing error; youth data is not available.

URS Table Number	General Notes
All	Reporting year is State Fiscal Year (SFY) 2019, except for Consumer Survey Tables; for these tables, the survey period is during CY 2018.
All	Community Programs: The Division uses an electronic health records system (the Alaska Automated Information Management System (AKAIMS)) to collect and report Community Program data. However, AKAIMS does not include information on youth or adults who receive illness self-management (ISM) services. Starting in SFY12, the number of individuals who received ISM services (based on grantee quarterly reports) was added to the AKAIMS counts for the total number individuals who received services. Due to this change in methodology, caution should be exercised when making comparisons with prior year data. The Division has improved data collection and reporting of demographic information for clients receiving ISM services; however, many of these clients are still included in the "Not Available" category for age, gender, race, ethnicity, employment status, and living situation. The AKAIMS client counts are unduplicated counts of "clients served" and reflect the number of clients who received services through program enrollment. These counts do not include clients who received a mental health service but were not enrolled in a program. Starting in SFY15, the AKAIMS counts of persons served reflect unduplicated client counts within and across agencies; prior year counts were unduplicated at the agency level, but duplicated across agencies if a client received services from more than one agency. As of SFY 19, for Community setting, counts are now based on a "client type" logic that allows reporting agencies to indicate if the individual receiving care meets specific criteria. Previously, "treated here for" criteria required the system to perform estimations to determine if the individual met priority population based on diagnosis and other criteria. Additionally, the "client type" logic accurately identifies SED/SMI clients in the 18-20 age group. Starting in SFY16, all ISM client counts generally reflect unduplicated client counts for each agency (note: there may be duplication across agencies). Over time, from SFY12 to SFY16, the agencies that report ISM client counts implemented improvements in their reporting methodology; the reported client counts reflect these changes in addition to changes in service delivery. Due to the changes in AKAIMS and ISM reporting methodology, caution is advised when making comparisons over time. Several of the state's larger sub-grantees are in the process of implementing a new electronic health record system. As such the client's counts for those grantees may not be accurate and likely reflect only a subset of the total clients served in those agencies. At this point it is impossible to tell how many clients may be missing but the division anticipates the SFY 2019 report to include the full population of people served due to the implementation of the reporting database through the state's health information exchange.
All	State Psych Hospital: Data source is the Alaska Psychiatric Institute (API) electronic health records system: Meditech
All	Other Psych Inpatient: This includes Designated Evaluation & Treatment (DET) and Acute Psych: DET: High Risk Inpatient Psychiatric Diversion from API. Data is collected and tracked through Excel. SFY19 DET data are not yet available; the SFY19 URS Tables include the SFY18 DET data for clients that had an inpatient stay at a DET facility (client count is based on paid claims only). DET numbers are reported as a lump sum of 182 "unknown" clients. The reduction between FY15 and FY19 is mostly due to Medicaid expansion, and it is likely that clients whose inpatient acute psych hospital states were formerly paid for with DET/DES funding, were covered under Medicaid expansion, which was implemented Sept. 1, 2015. Acute Psych: Data is from the MMIS-Cognos Decision Support System (Medicaid claims data). Includes in- and out-of-state clients. The unduplicated client count is based on paid Medicaid claims.
All	RPTC: For Community Program client counts, age is assigned as of the middle of the reporting period (SFY 2019 = Age as of December 31, 2018). For API, Other Psych Inpatient, and RPTC client counts (except those in Table 6), age is assigned as of the middle of the reporting period; the Table 6 client counts have age (child vs adult) assigned as of the date of admission. Age – Admissions/Discharges: For all admission and discharge counts, age is assigned as of the date of admission.
All	Race/Ethnicity: For Community Programs, Acute Psych, and RPTCs, 'Hispanic' data is collected separately from 'Race' data (i.e., two separate questions); for API, 'Hispanic' was collected as part of the 'Race' question; and for DET, no 'Race' or 'Hispanic' data was collected. For consistency in reporting in the URS Tables, the balance were assigned an Ethnicity of 'Hispanic Origin Not Available.' All of the DET counts were assigned an Ethnicity of 'Hispanic Origin Not Available.'
3	For the 2018 URS tables, the state was only able to report on state psychiatric hospital data that has been processed through Medicaid (i.e. a subset of the total population for the year). See general notes for explanation of decreased counts from 2018 to 2019.

URS Table Number	General Notes
3, 6	<p>The Alaska Psychiatric Institute, the state's sole state psychiatric hospital, has experienced significant challenges throughout the past two state fiscal years. Staff shortages (especially for nursing staff), as well as multiple plans of correction from federal partners and accreditation bodies have posed a significant challenge. In FY2018, the average daily census was just 64 out of a total capacity of 80 beds. Staff shortages have also lead to several high-profile incidents that have detracted from the core mission of API including 403 patient assaults on staff resulting in 16 staff injuries that required at least some medical intervention in FY2018. Decreased bed capacity at the Alaska Psychiatric Institute creates a bottleneck for the entire mental-health care system as patients are being housed in Hospital emergency departments and other inappropriate settings while they await bed availability. Department of Health and Social Services Commissioner Davidson activated the DHSS Emergency Operations Center (EOC) on October 13, 2018 in order to solve this problem. Some strategies being pursued are: Increases to Nurse salaries to increase nurse recruitment and retention. API must hire 102 new nurses to operate its 80 beds.; Contracting with NorthStar Behavioral Health to utilize their bed capacity until API can be fully staffed; Ensuring emergency departments have access to patient care plans and can refer appropriately; Emergency regulation changes to ensure hospitals are being compensated for Medicaid Patients in their emergency departments while they await available beds at API; Crisis Stabilization Center: Contract with a vendor to stand up and manage a Crisis Stabilization Center in Anchorage; Feasibility study to construct a new forensic hospital; Designation of new facilities to take involuntarily committed patients.</p>
4	<p>Employment Status: Starting in SFY14, the methodology for reporting the most recent employment status changed from using the AKAIMS Admission/Discharge data to the Client Status Review (CSR) data. The CSR is administered at admission, periodically during treatment (every 90-135 days), and at discharge. Total number of employment in table 4 includes 131 clients whose age is reported as 'not available' in table 3. For community settings, there was more accurate identification of individuals previously reported in the "Not available" category because analyses are now directly utilizing TEDS codes exported with client data from AKAIMS.</p>
5A/B	<p>Funding Support -- Medicaid Status: For consistency in reporting across service settings, the data reflect 'Primary Expected Payment Source' = Medicaid or Non-Medicaid. We are not able to identify clients with Medicaid Only, Non-Medicaid Only, or both Medicaid and Non-Medicaid. For most clients, we are able to determine if their primary expected payment source is Medicaid or Non-Medicaid. For "Medicaid Only," we are reporting the number of clients with "Primary Expected Payment Source = Medicaid," and for "Non-Medicaid Only," we are reporting the number of clients with "Primary Expected Payment Source = Non-Medicaid." We used the following methodology for each service setting: for Community Programs: In AKAIMS, the primary expected payment source is collected. If the client's primary expected payment source is Medicaid, then the client is counted under "Medicaid Only;" if the client's primary expected payment source is not Medicaid, then the client is counted under "Non-Medicaid Only." Starting in SFY13, the clients receiving ISM services are counted under "Non-Medicaid Only" because clients are not charged for these services (note: in SFY12, clients receiving ISM services were counted under "Medicaid Status Unknown)". For State Psych Hospital (API): The primary and secondary insurance types are collected. Clients are accordingly reported under (1) Medicaid Only, (2) Non-Medicaid Only, (3) Both Medicaid and Other Sources funded their treatment, and (4) Medicaid Status Not Available. For RPTCs and Acute Psych: Data is from the MMIS-Cognos Decision Support System (Medicaid claims data); the assumption is made that the primary expected payment source for all clients is Medicaid, so all clients are counted under "Medicaid Only." For DET: The primary expected payment source is not Medicaid; all DET clients are counted under "Non-Medicaid Only." The total number of consumers with both Medicaid and non-Medicaid funding: 1. In 2019, because primary and secondary insurance types are collected in Meditech (API's data source), the decision was made to report these consumers in the "both Medicaid and Non-Medicaid Funding". Only API data is presented in the "both Medicaid and Non-Medicaid Funding". 2. For the 2018 URS tables, the state was only able to report on state psychiatric hospital data that has been processed through Medicaid (i.e. a subset of the total population for the year). See "API_2018 URS Tables" for a count of 2018 consumers.</p>
6	<p>For the 2018 URS tables, the state was only able to report on state psychiatric hospital data that has been processed through Medicaid (i.e. a subset of the total population for the year).</p>
7	<p>The 1115 Waiver seeks to provide Alaskans with a comprehensive suite of cost-effective, high quality behavioral health services designed to ensure access to the right services at the right time in the right setting. This lofty goal results in moving clients to a lower level of care through provider incentives. These lower levels of care include inpatient care at the community hospital level. This level of care is the reason providers are now billing Medicaid, through Fee For Service, that results in higher level of Medicaid expenditures. The State of Alaska is undergoing significant budget reductions. These reductions result in fewer clients and lower 'other' expenditures. Another 1115 Waiver goal is to rebalance the current behavioral health system of care to reduce Alaska's over-reliance on acute, institutional care and shift to more community- or regional-based care. DBH is decreasing the use of inpatient hospital and emergency department care episodes that results in this lower 24 hour care expenditures. Significant state budget reductions results in fewer clients. The Division's Treatment and Recovery section is getting a large portions of the division's financial reductions. These reductions result in less grant funding to our treatment and recovery providers, therefore less administration expenditures.</p>

URS Table Number	General Notes
7A	Under the demonstration, Alaska will implement a series of proposed strategies and evidence-based interventions aimed at more effectively addressing the needs of each of the selected target populations. Improving the consistency of screening, assessment, and service/placement decisions through use of evidence-based and evidence-informed tools resulted in less First Episode Psychosis Expenditures. Alaska continues to struggle to recruit and retain qualified Practitioners, the Division has created both education and financial incentives to reduce these employment gaps but they will require time for results. Therefore, the MHBG 10% set aside being less is a result of the Division not having sufficient practitioners to utilize these specific funds. A priority of the 1115 Waiver is to transition from a direct grants to a "fee for service". The Division is working with our providers to implement this new system. Implementing this system, as with many of the 1115 Waiver's requires providers changing to a new system. During this interim, out expenditures will be lower until the providers fully integrate into the new system.
12	Percentage of Persons Served who have a Dual Diagnosis (Co-Occurring Mental Health and Substance Abuse): For Community setting, counts are now based on a "client type" logic that allows reporting agencies to indicate if the individual receiving care meets specific criteria. Previously, "treated here for" criteria required the system to perform estimations to determine if the individual met priority population based on diagnosis and other criteria. Additionally, the "client type" logic accurately identifies SED/SMI clients in the 18-20 age group.
15	Living Situation: Starting in SFY14, for Community Programs, the methodology for reporting the most recent living situation changed from using the AKAIMS Admission/Discharge data to the Client Status Review (CSR) data. The CSR is administered at admission, periodically during treatment (every 90-135 days), and at discharge. For community settings, there was more accurate identification of individuals previously reported in the "Not available" category because analysis is now directly utilizing TEDS codes exported with client data from AKAIMS.
16	EBP data is reported for Community Setting only. In order to split the data between the types of services (Supported Housing, Supported Employment, Assertive Community Treatment) the division has utilized a different data source (quarterly reports) that does not collect demographic information such as race, age, ethnicity, etc. For this reason, the total count of unduplicated persons served will not match those on table 14 and 14b. The Electronic Health Records System (AKAIMS) is able to pull total unduplicated clients by demographic; however, it does not track non-medical services with demographics at such a level. For instance, the 46 individuals receiving supported employment services are included in the total SMI population of 11,641; however, we do not know which of the 11,641 clients received that service, we simply know that 46 individuals were recipients of that service. The SAMHSA PATH Annual Reports from Alaska demonstrate 96 participants that received supported housing services in relation to Behavioral Health. This population is recorded in the Housing Information Management System and do not have a direct record in the Behavioral Health Information Management System. There are not identifiers to state if an individual falls in the SMI, General Mental Health or SUD population so the count was not included in the URS Tables. The Supported Employment Grant transitioned to an Evidence Based Practice that is inclusive of individuals regardless of behavioral health population type. The total count for the Supported Employment population for the fiscal year is 334. While other demographics can be pulled to complete the URS table, the primary indicator if an individual meets SMI, General Mental Health or SUD is not required as the TEDS reporting obligations on Supported Employment had been removed. Increase in the number of clients receiving Therapeutic Foster Care services is due to more focus on engaging foster parents; in addition, anticipation of 1115 opportunities is adding to the increase.
17	EBP data is reported for Community Setting only. The Division is working to improve data collection and reporting capability relative to clients receiving EBP services. Also, until we are able to report demographic information for all clients receiving the specific EBP services, the client counts in Table 17 are included in the "Not Available" category for age, gender, race, and ethnicity (as requested by NRI). A reduction in clients served is generally associated with a single agency. During the report year, the agency identified 1) fewer clients participating in program services, and 2) an increase in intoxicated clients – as measured by a BRAC monitor – who consequently were not allowed on-site at the agency. Illness Self-Management: See information under Data Sources, Limitations, and Notes for Community Programs.
21	May include forensic patients. The state is only able to report on non-state owned facilities where the payment source is Medicaid. In situations where the payment source is private insurance or another payer, the state does not retain data for those situations. 2018 numbers included both state and non-state inpatient psychiatric where the payment source was Medicaid. 2019 numbers include only non-state inpatient psychiatric where the payment source is Medicaid.
