Pennsylvania

URS Table Number	General Notes
4	The increase in the number of clients employed and unemployed from 2019 to 2020 is due to the low numerators and denominators available for Pennsylvania employment data which creates a situation where fluctuation may occur. Data on individuals employed is very limited with only 10.69% of individuals that received a mental health service have an updated employment status in 2020 reporting and 9.26% individuals that received a mental health service have an updated employment status in 2019 reporting.
5A	Non-Medicaid funding for Pennsylvania is primarily the County Base Funded Mental Health program. This program has had difficulty in providing accurate and complete encounter data to the state. Pennsylvania continues to work with the Pennsylvania counties to submit encounters timely and accurately. The increase in the total number of individuals and individuals with both Medicaid and Non-Medicaid funding for mental health services is a direct result of these efforts and is the increase in submitted encounters. It is expected to continue to see increases in this data each reporting year.
6	Pennsylvania continues to manage an initiative to reduce the number of days an individual needs to wait for treatment in a forensic level of care in the Pennsylvania State Mental Health Hospital system. Therefore, more individuals are being admitted to the Pennsylvania State Mental Health Hospital system and likewise individuals that are determined competent during competency assessment reviews are being discharged from the Pennsylvania State Mental Health Hospital system. Therefore, there has also been a decrease in the length of stay as many individuals that have been determined competent through the competency assessments are being discharged more timely to make additional room for individuals waiting for admission.
7A, 8	OMHSAS Fiscal is in the process of improving fiscal reporting processes, including for CMHSBG administrative funding reported on URS Table 8. The changes from 2019 to 2020 in EBPs for ESMI and non-direct services expenditures in funding are due to these improvements in reporting methodology.
12	The increase in the percent of children served with a co-occurring MH/SUD from 2019 to 2020 represents a small numerator and denominator that is prone to fluctuation.
15	Data regarding updated housing status is limited for mental health individuals and less than 1% of all individuals that receive a service have a valid housing status. This fluctuation is due to these low numbers.
16A	The breakout numbers between children and adults admitted in the FY from last year's report were collected by the vendor, while this year have been collected by the state. The numbers can only be collected manually due to their identifying nature of the data. There has been some delay with receiving the numbers, but we will be able to provide them at a later date. Values for Number of Adult Admissions into CSC Services During FY and Current Number of Adults with FEP Receiving CSC FEP Services include all individuals. These are not broken out by Children and Adults.
