NSDUH Scope and Target Population

• Conducted by the Federal Government since 1971
• Comprehensive household interview survey of substance use, substance use disorders, mental health, and the receipt of treatment services for these disorders in the United States
• Produces estimates representative of the population at national and state levels
• Covers the civilian, noninstitutionalized population aged 12 or older in all 50 states and Washington, DC:
  – Includes households, college dorms, homeless in shelters, civilians on military bases
  – Excludes active military, long-term hospital residents, prison populations, homeless not in shelters
• NSDUH 2021 sample included 69,850 people
Data from 2021 should not be compared or pooled with data from prior years

Why not?

1. **Mode effect:** Web data collection began in 2020. There were significant differences in estimates between web and in-person modes of data collection.

2. **Seasonal effect:** There were systematic differences between two-quarter estimates from 2015 to 2019 and corresponding four-quarter estimates. Because 2020 data were mostly collected in only two quarters, these data cannot be compared with the full year of 2021 data.

3. **Substance Use Disorder (SUD) definition changes:** Starting in 2020, SUDs were defined according to criteria from the *Diagnostic and Statistical Manual of Mental Disorders*, 5th edition (DSM-5). Therefore, SUD estimates cannot be compared with 2019 or earlier.
About This Presentation

- The racial and ethnic groups discussed in this presentation are mutually exclusive. People who were of Hispanic or Latino ethnicity could be of any race but are not included in the estimates for any of the racial categories. Estimates for people who were not of Hispanic or Latino ethnicity are reported by race. People reporting two or more races and who were not of Hispanic or Latino ethnicity are noted as “Multiracial” in this presentation. People reporting their race as Black or African American are subsequently referred to as Black. People reporting their ethnicity as Hispanic or Latino are subsequently referred to as Hispanic.

- Statistical testing was performed for comparisons of estimates across age groups and among racial and ethnic groups according to procedures described in the 2021 Methodological Summary and Definitions report. For consistency with the typical criteria for statistical testing in NSDUH, age group differences were considered statistically significant at the .05 level of significance. For testing among racial and ethnic groups, a more conservative level of .01 was used for considering differences to be statistically significant. Statistically significant differences resulting from these testing procedures are described using terms such as “higher,” “lower,” “more likely,” or “less likely.” Statements use terms such as “similar” or “the same” when a difference was not statistically significant. When estimates are presented without reference to differences across groups, statistical significance is not implied.

Substance Use in the Past Month
Past Month Substance Use: Among Black People Aged 12 or Older

Rx = prescription.

Note: The estimated numbers of current users of different substances are not mutually exclusive because people could have used more than one type of substance in the past month.
Past Month Alcohol Use, Binge Alcohol Use, and Heavy Alcohol Use: Among Black People Aged 12 or Older

Note: Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion on at least 1 day in the past 30 days. Heavy Alcohol Use is defined as binge drinking on the same occasion on 5 or more days in the past 30 days; all heavy alcohol users are also binge alcohol users.

- More than half of past month alcohol users were binge drinkers

**Diagram Details:**
- Total Alcohol Users: 14.3M
- Binge Alcohol Users: 7.4M (51.9% of Alcohol Users)
- Heavy Alcohol Users: 1.8M (24.3% of Binge Alcohol Users and 12.6% of Alcohol Users)
Binge Alcohol Use in the Past Month by Racial and Ethnic Groups: Among People Aged 12 or Older

- Black people were more likely than Asian people to binge drink in the past month.

* Low precision; no estimate reported.

NH = Not Hispanic or Latino; AIAN = American Indian or Alaska Native; Black = Black or African American; Hispanic = Hispanic or Latino; NHOPI = Native Hawaiian or Other Pacific Islander.

Note: Binge Alcohol Use is defined as drinking five or more drinks (for males) or four or more drinks (for females) on the same occasion on at least 1 day in the past 30 days.
Type of Tobacco Use and Nicotine Vaping: Among Black People Aged 12 or Older Who Used Nicotine Products in the Past Month

• Among current nicotine product users, the use of specific nicotine products varied by age group

• An estimated 20.6% of Black young adults aged 18 to 25 who used nicotine products in the past month vaped only nicotine products compared with 2.2% of Black adults aged 26 or older

* Low precision; no estimate reported.
Past Month Nicotine Vaping: Among Black People Aged 12 or Older

- The percentage of people who vaped nicotine was highest among Black young adults aged 18 to 25.
Past Year and Past Month Illicit Drug Use
Past Year Illicit Drug Use: Among Black People Aged 12 or Older

No Past Year Illicit Drug Use
25.9M Black People (75.7%)

Past Year Illicit Drug Use
8.3M Black People (24.3%)

- Marijuana: 7.3M (21.3%)
- Rx Pain Reliever Misuse: 1.2M (3.5%)
- Cocaine: 594K (1.7%)
- Hallucinogens: 591K (1.7%)
- Rx Tranquilizer or Sedative Misuse: 433K (1.3%)
- Rx Stimulant Misuse: 215K (0.6%)
- Inhalants: 182K (0.5%)
- Methamphetamine: 152K (0.4%)
- Heroin: 114K (0.3%

Rx = prescription.

Note: The estimated numbers of past year users of different illicit drugs are not mutually exclusive because people could have used more than one type of illicit drug in the past year.
Past Year Illicit Drug Use and Marijuana Use: Among Black People Aged 12 or Older

Among young adults aged 18 to 25, 38.5% used illicit drugs and 37.0% used marijuana in the past year.
Black people were less likely to use illicit drugs than American Indian or Alaska Native and Multiracial people.

Black people were more likely than Asian and Hispanic people to use illicit drugs in the past month.
Marijuana Use in the Past Month by Racial and Ethnic Groups: Among People Aged 12 or Older

- Black people were less likely to use marijuana than American Indian or Alaska Native and Multiracial people.
- Black people were more likely than Asian and Hispanic people to use marijuana in the past month.

NH = Not Hispanic or Latino; AIAN = American Indian or Alaska Native; Black = Black or African American; Hispanic = Hispanic or Latino; NHOPI = Native Hawaiian or Other Pacific Islander.
Type of Marijuana Use: Among Black People Aged 12 or Older Who Used Marijuana in the Past Month

- About 1 in 10 current marijuana users aged 12 or older vaped marijuana in the past month*

* Low precision; no estimate reported.
Past Year Opioid Misuse: Among Black People Aged 12 or Older

- 1.2M Black People with Pain Reliever Misuse
- 75K Black People with Pain Reliever Misuse and Heroin Use
- 114K Black People with Heroin Use
- 1.1M Black People with Pain Reliever Misuse Only
- 40K Black People with Heroin Use Only

1.2 Million Black People Aged 12 or Older with Past Year Opioid Misuse
Opioid Misuse in the Past Month by Racial and Ethnic Groups: Among People Aged 12 or Older

- No significant differences in prevalence of opioid misuse between racial and ethnic groups

Past Year Prescription Pain Reliever Misuse: Among Hispanic People Aged 12 or Older Who Used the Specific Prescription Pain Reliever Subtype in the Past Year

* Low precision; no estimate reported.
Substance Use Disorder
Past Year Substance Use Disorder (SUD): Among Black People Aged 12 or Older

Note: The estimated numbers of people with substance use disorders are not mutually exclusive because people could have use disorders for more than one substance.

1 Includes data from all past year users of marijuana, cocaine, heroin, hallucinogens, inhalants, methamphetamine, and prescription psychotherapeutic drugs (i.e., pain relievers, tranquilizers, stimulants, or sedatives).

2 Includes data from all past year users of the specific prescription drug.
Past Year Substance Use Disorder: Among Black People Aged 12 or Older

- Black young adults aged 18 to 25 were the most likely to have a past year substance use disorder or drug use disorder.
Substance Use Disorder (SUD) in the Past Year by Racial and Ethnic Groups: Among People Aged 12 or Older

<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>NH White</td>
<td>8.0% (1.3M)</td>
<td></td>
</tr>
</tbody>
</table>

- **Black** people were less likely to have an SUD than American Indian or Alaska Native and Multiracial people.
- **Black** people were more likely than Asian people to have an SUD.

NH = Not Hispanic or Latino; AIAN = American Indian or Alaska Native; Black = Black or African American; Hispanic = Hispanic or Latino; NHOPI = Native Hawaiian or Other Pacific Islander.
Perceived Need for Substance Use Treatment: Among Black People Aged 12 or Older with a Past Year Illicit Drug or Alcohol Use Disorder Who Did Not Receive Substance Use Treatment at a Specialty Facility in the Past Year

Note: People who had an illicit drug or alcohol use disorder were classified as needing substance use treatment.

- Nearly all Black people with a substance use disorder who did not get treatment at a specialty facility did not think they needed treatment.

47K Felt They Needed Treatment and Made an Effort to Get Treatment (0.9%)

128K Felt They Needed Treatment and Did Not Make an Effort to Get Treatment (2.4%)

5.0M Did Not Feel They Needed Treatment (96.7%)

5.2 Million Black People with an Illicit Drug or Alcohol Use Disorder Who Did Not Receive Substance Use Treatment at a Specialty Facility
Major Depressive Episode:
Among Adolescents Aged 12 to 17
Past Year Major Depressive Episode (MDE): Among Black Adolescents Aged 12 to 17

• In 2021, 1 in 7 (14.0%) Black adolescents had an MDE in the past year

• 3 in 4 (76.5%) Black adolescents with MDE had severe impairment

Note: Adolescent respondents with unknown MDE data were excluded.
Major Depressive Episode (MDE) in the Past Year by Racial and Ethnic Groups: Among Adolescents Aged 12 to 17

- Black adolescents were less likely to have an MDE than Multiracial, Hispanic, and White adolescents.
Among the 479,000 Black adolescents in 2021 who had a past year MDE, nearly 60% did not receive treatment for depression in the past year.
• No differences were found for receipt of treatment for depression among Black adolescents compared with other racial and ethnic groups.
Substance Use by Major Depressive Episode (MDE) in the Past Year: Among Black Adolescents Aged 12 to 17

<table>
<thead>
<tr>
<th>Substance</th>
<th>Had MDE</th>
<th>Did Not Have MDE</th>

<td>2.6% (76K)</td>
</tr>
</tbody>
</table>

- Black adolescents who had an MDE in the past year were more likely to use illicit drugs in the past year or use tobacco products or vape nicotine in the past month than Black adolescents who did not have an MDE in the past year.

* Difference between this estimate and the estimate for adolescents without MDE is statistically significant at the .05 level.

Note: Adolescent respondents with unknown MDE data were excluded.
Any or Serious Mental Illness: Among Adults Aged 18 or Older
Past Year Mental Illness: Among Black Adults Aged 18 or Older

- Black adults aged 50 or older were less likely to have any mental illness
- Black young adults aged 18 to 25 had the highest prevalence of serious mental illness
Any Mental Illness in the Past Year by Racial and Ethnic Groups: Among Adults Aged 18 or Older

- Black adults were less likely to have a mental illness than Multiracial adults
- Black adults were more likely to have mental illness than Asian adults

NH = Not Hispanic or Latino; AIAN = American Indian or Alaska Native; Black = Black or African American; Hispanic = Hispanic or Latino; NHOPI = Native Hawaiian or Other Pacific Islander.
Receipt of Mental Health Services in the Past Year:
Among Black Adults Aged 18 or Older with Mental Illness in the Past Year

- More than 3 in 5 Black adults with SMI received mental health services in the past year

* Low precision; no estimate reported.
SMI = serious mental illness.

Note: Mental Health Services include any combination of inpatient or outpatient services, receipt of prescription medication, or virtual services.
Receipt of Mental Health Services by Racial and Ethnic Groups: Among Adults Aged 18 or Older with a Past Year Mental Illness

- Black adults with mental illness were **less likely** to have received services than White and Multiracial adults.

- Black adults with mental illness were **more likely** to have received services than Asian adults.

![Bar chart showing percent receiving mental health services among those with any mental illness in past year.](chart)

*Low precision; no estimate reported.*

NH = Not Hispanic or Latino; AIAN = American Indian or Alaska Native; Black = Black or African American; Hispanic = Hispanic or Latino; NHOPI = Native Hawaiian or Other Pacific Islander.
Serious Thoughts of Suicide, Suicide Plans, and Suicide Attempts
Past Year Serious Thoughts of Suicide, Suicide Plans, or Suicide Attempts: Among Black Adolescents Aged 12 to 17

- 11.9% of Black adolescents had thoughts of suicide
- 5.6% made a suicide plan
- 4.1% attempted suicide

- Many Black adolescents did not want to answer questions about suicide, which suggests that some Black adolescents could have had these thoughts but did not feel comfortable disclosing that information
Past Year Serious Thoughts of Suicide, Suicide Plans, or Suicide Attempts: Among Black Adults Aged 18 or Older

- Thoughts of suicide, suicide plans, and suicide attempts were highest among Black young adults aged 18 to 25.
Suicidality by Racial and Ethnic Groups: Among Adults Aged 18 or Older

- Few racial and ethnic differences were found for suicidality
Co-Occurring Substance Use Disorder and Mental Illness: Among Adults Aged 18 or Older
Among Black Adults Aged 18 or Older

- 2.3 million (7.4%) Black adults aged 18 or older had co-occurring SUD and AMI

- Nearly 2 in 5 (38.6%) of all Black young adults aged 18 to 25 had SUD or AMI

AMI = any mental illness; SMI = serious mental illness; SUD = substance use disorder.
Past Year Substance Use by Mental Illness: Among Black Adults Aged 18 or Older

AMI = any mental illness; SMI = serious mental illness.

+ Difference between this estimate and the estimate for adults aged 18 or older without mental illness is statistically significant at the .05 level.

- Black adults with SMI or AMI in the past year were **more likely** to have used or misused these substances than those without mental illness.
Perceived Recovery: Among Black Adults Aged 18 or Older

- **7 in 10 (69.2%)** Black adults who ever had a *substance use problem* considered themselves to be recovering or in recovery

- **2 in 3 (63.6%)** Black adults who ever had a *mental health issue* considered themselves to be recovering or in recovery
