

2023 Uniform Reporting Summary Output Tables Executive Summary

State Mental Health Agencies (SMHAs) compile and report annual data as part of SAMHSA's Community Mental Health Services Block Grant Report requirements. These compiled data constitute the Uniform Reporting System (URS).

The URS is comprised of 25 tables that are developed by SAMHSA in consultation with SMHAs. The 2023 URS Output Tables present findings from 58 states and U.S. territories. The U.S. Virgin Islands was omitted because they did not submit any data. Each output table provides summary information on the SMHA clients served in 2023: sociodemographic characteristics of clients served, outcomes of care, use of selected evidence-based practices, client assessment of care, Medicaid funding status, living situation, employment status, crisis response services, and readmission to state psychiatric hospitals within 30 and 180 days. Key data highlights are listed below:

- In 2023, 8,253,780 clients received SMHA services from 58 states and U.S. territories/jurisdictions. This is an increase from 8,180,236 clients served by the SMHAs in 2022. There were 6,015,438 adults (or 23.0 per 1,000), 2,229,152 children (or 30.7 per 1,000) served. Age data was missing for 9,190 (0.1 percent) clients served.
- Among SMHA clients, there were 4,418,899 (53.5 percent) females served while there were 3,766,336 (45.6 percent) males served. In the majority of states (41), more females were served than males, and in the remaining states (17), more males were served than females.
- The age distribution of SMHA clients served was the largest among ages 25-44 with 33.2 percent, followed by ages 45-64 with 22.5 percent, children ages 13-17 with 12.7 percent, and children ages 6-12 with 11.8 percent.
- Over half of SMHA clients served were White, comprising the largest racial category at 56.8 percent; Black or African American clients comprised the next largest group with 17.3 percent. Race data was missing for 12.5 percent of clients served. When looking at ethnicity, the majority of SMHA clients served were non-Hispanic (68.5 percent), while 15.2 percent were Hispanic.

Alaska 2023 Mental Health National Outcome Measures (NOMS): SAMHSA Uniform Reporting System

Utilization Rates/Number of Consumers Served	U.S.	State	U.S. Rate	States
Penetration Rate per 1,000 Population	8,253,780	31.66	24.50	58
Community Utilization per 1,000 Population	8,003,047	30.29	23.75	58
State Hospital Utilization per 1,000 Population	114,039	0.76	0.34	54
Other Psychiatric Inpatient Utilization per 1,000 Population	385,614	0.28	1.33	41

Notes:
Are Client Counts Unduplicated? Duplicated between Hospitals and Community **Number of States with Unduplicated Counts** 44

This table uses data from URS Table 2A, Table 2B and from the U.S. Census Bureau. All denominators for penetration rates use the SC-EST2022-ALLDATA6: Annual State Resident Population Estimates for 6 Race Groups by Age, Sex, and Hispanic Origin data from the U.S. Census Bureau.

U.S. totals are calculated uniquely for each data element based on only those states who reported clients served. The ethnicity categories may not sum to the total number of clients served because some states do not collect and report ethnicity separately from race. The penetration rates for Transgender, Gender Non-Conforming, Other gender, Some Other Race, as well as Age, Gender, Race, and Ethnicity Not Available are not reported on this table because the U.S. Census data does not include these categories.

Regional groupings are based on SAMHSA's Block Grant Regions.

State Notes:

Table 2A	
Age	Age is assigned as of the middle of the reporting period for SFY23, thus December 31st, 2022.
Gender	See general data notes; for some data/sources/systems for which there were internal data gaps, simple client counts rather than full demographics are reported.
Race	See general data notes; for some data/sources/systems for which there were internal data gaps, simple client counts rather than full demographics are reported.
Overall	See general data notes; for API clients, duplicated counts could occur if the API client was also seen in a community setting during the reporting period.
Table 2B	
Age	Age is assigned as of the middle of the reporting period for SFY23, thus December 31st, 2022.
Gender	See general data notes; for some data/sources/systems for which there were internal data gaps, simple client counts rather than full demographics are reported.
Ethnicity	See general data notes; for some data/sources/systems for which there were internal data gaps, simple client counts rather than full demographics are reported.
Overall	See general data notes; for some data/sources/systems for which there were internal data gaps, simple client counts rather than full demographics are reported. See general data notes; for API clients, duplicated counts could occur if the API client was also seen in a community setting during the reporting period.

Other	-	-	3,204	0.0%	-	-	9
Gender Not Available	555	2.5%	43,553	0.5%	-	-	37

Notes:

U.S. figures are based on states reporting.

This table uses data from URS Table 3 and from U.S. Census Bureau. All denominators for penetration rates use the SC-EST2022-ALLDATA6: Annual State Resident Population Estimates for 6 Race Groups by Age, Sex, and Hispanic Origin data from the U.S. Census Bureau.

U.S. penetration rates are calculated uniquely for each data element based on only those states who reported numerator (clients served) data.

The penetration rates for Transgender, Gender Non-Conforming, and Other gender, as well as Age Not Available and Gender Not Available are not reported on this table because the U.S. Census data does not include these categories.

State Notes:

- Age Age is assigned as of the middle of the reporting period for SFY2023; thus December 31st, 2022.
- Gender See General Notes.
- Overall See General Notes.

Notes:

U.S. figures are based on states reporting.

This table uses data from URS tables 5A and 5B.

The ethnicity categories may not sum to the total number of clients served because some states do not collect and report ethnicity separately from race.

Type of Medicaid Data Reported

Data based on Medicaid Eligibility, not Medicaid Paid Services.

State Notes:

- 5A Age None
- 5A Gender See General Notes.
- 5A Overall Overall, for special data sets (e.g., ISM, discretionary grants, API), "Medicaid Status Unknown" was selected when the source was incomplete/had gaps/contradictory information to better ensure data integrity/reliability/alignment in the URS tables.
- 5B Overall See general notes and note that for some special data sets (e.g., ISM, API), "Medicaid Status Unknown" was selected when the source was incomplete/had gaps on this element so as to better ensure data integrity/consistency/reliability in the URS tables.

Notes:

U.S. figures are based on states reporting.

This table uses data from URS Table 17.

States are at different stages of crisis services implementation. In some states, mobile crisis teams are not available 24/7 or statewide and states may staff and operate crisis stabilization programs in different ways.

State Notes:

See General Notes.

APPROPRIATENESS DOMAIN: Number of Admissions During the Year to State Hospitals, Other Psychiatric Inpatient, Residential Treatment Centers, and Community-Based Programs, FY 2023

Notes:

This table uses data from URS Table 3 and 6.

Admission Rate = number of admissions divided by total served during the year.

US Admissions During Year uses data from states reporting data only. States are only included in "US Total Served" if they also reported data on admissions.

US Total Served During Year is calculated using data in URS Table 3.

Table 3 State Notes:

- Age: Age is assigned as of the middle of the reporting period for SFY2023; thus December 31st, 2022.
- Gender: See General Notes.
- Overall: See General Notes.

Table 6 State Notes:

- State Psychiatric Hospital: Data from the State Psychiatric Hospital are received from API (Alaska Psychiatric Institute).
- Other Psychiatric Inpatient: Duplicate counts potential across Community programs, residential treatment centers, and other psychiatric inpatient.
- Residential Treatment Centers: Duplicate counts potential across Community programs, residential treatment centers, and other psychiatric inpatient.
- Community Mental Health Programs: Duplicate counts potential across Community programs, residential treatment centers, and other psychiatric inpatient.
- Overall: Alaska cannot calculate the overall LOS, but will endeavor to calculate these fields in the next cycle of the URS tables.

APPROPRIATENESS DOMAIN: Length of Stays in State Psychiatric Hospitals, Other Psychiatric Inpatient Settings, and Residential Treatment Centers, FY 2023

Notes:

Resident clients are clients who were receiving services in inpatient settings at the end of the reporting period.

This table uses data from URS Table 6.

State Notes:

State Psychiatric Hospitals Data from the State Psychiatric Hospital are received from API (Alaska Psychiatric Institute).

Other Psychiatric Inpatient Duplicate counts potential across Community programs, residential treatment centers, and other psychiatric inpatient.

Residential Treatment Centers Duplicate counts potential across Community programs, residential treatment centers, and other psychiatric inpatient.

Overall Alaska cannot calculate the overall LOS, but will endeavor to calculate these fields in the next cycle of the URS tables.

APPROPRIATENESS DOMAIN: Percent of Adults and Children Served Who Meet the Federal Definition of SMI/SED and Percent of Adults and Children Served Who Have Co-Occurring Mental and Substance Use Disorders, FY 2023

Alaska

Reporting Period: 7/1/2022 To: 6/30/2023

Adults and Children Who Meet the Federal Definition of SMI/SED	State	US Average	US Median	States Reporting
Percent of Adults served through the SMHA who meet the Federal definition for SMI	53.9%	70.9%	77.0%	57
Percent of Children served through the SMHA who meet the Federal definition for SED	70.9%	69.3%	74.0%	57

Co-Occurring MH and Substance Use Consumers	State	US Average	US Median	States Reporting
Percent of Adults served through the SMHA who had a co-occurring M/SUD	51.0%	27.1%	24.5%	56
Percent of Children served through the SMHA who had a co-occurring M/SUD	12.0%	6.9%	2.5%	54
Percent of Adults served through the SMHA who met the Federal definitions of SMI who also have a substance use diagnosis	45.0%	26.8%	25.0%	54
Percent of Children served through the SMHA who met the Federal definitions of SED who also have a substance use diagnosis	11.0%	6.9%	2.5%	54

Notes:

U.S. figures are based on states reporting.

This table uses data from URS Table 12.

How are the number of clients with co-occurring disorders counted and calculated?

% of priority population and co-occurring are based on community program data only. See general Notes. Important Caveat: Due to staff departures and systems issues, and prior year cyberattack/pandemic issues, DBH is unable to report Table 12 percentages with SFY23, and thus is reporting our figures from SFY20 here (last year for which actuals were available) as estimates to inform our understanding of SFY23. DBH will strive to modify/adapt systems for next year's Table 12 to again capture these percentages for SFY24 and plans some program alignment discussions with providers and staff.

State Notes:

None

Ethnicity Not Available	8	0.9%	16,519	7.8%	1.9%	4.3%	43

Notes:

U.S. figures are based on states reporting.

This table uses data from URS Table 15.

U.S. totals are calculated uniquely for each data element based on only those states who reported numerator (clients served) data.

The ethnicity categories may not sum to the total number of clients served because some states do not collect and report ethnicity separately from race.

State Notes:

None

What populations are reported? All Clients Number of States Reporting All Clients: 35 Number of States Reporting Some Clients: 17

When Is Employment Status Measured?	At Admission	At Discharge	Monthly	Quarterly	Other
AK	Yes	Yes	-	-	Per entry in AKAIMS and ISM databases
US	38	18	2	7	24

Notes:

This table uses data from URS Table 4.

Consumers employed as a % of those in labor force uses the sum of adults employed and unemployed as the denominator.

Consumers employed as % of known employment status uses the sum of adults employed, unemployed and not in labor force as the denominator.

State Notes:

Age Age is assigned as of the middle of the reporting period for SFY23, thus December 31st, 2022.

Gender See general data notes.

Overall See general data notes; The explanation for why T4 exceeds T3 community adult total, is that additional data from the reporting period is updated/submitted and coding issues from integrating multiple data sources remain from data programming.

OUTCOMES DOMAIN: Employment Status of Adult Mental Health Consumers Served in the Community by Diagnosis, FY 2023

Forensics included in "non forensic" data? No

Notes:

U.S. figures are based on states reporting. This table uses data from URS Tables 20A and 20B.

The ethnicity categories may not sum to the total number of readmissions and discharges because some states do not collect and report ethnicity separately from race.

State Notes:

None

URS Table Number	General Notes
ALL	The reporting year is State Fiscal Year (SFY) 2023, except for the consumer surveys; for those consumer survey tables (9, 11/a, 19a/b), the survey period is CY 2022.
ALL	<p>Data Sources, Limitations, and Notes: Community Programs</p> <p>The Division uses an electronic health records system (the Alaska Automated Information Management System (AKAIMS)) to collect and report Community Program data. However, AKAIMS does not include information on youth or adults who receive illness self- management (ISM) services. Starting in SFY12, the number of individuals who received ISM services (based on grantee quarterly reports) was added to the AKAIMS counts for the total number individuals who received services. Due to this change in methodology, caution should be exercised when making comparisons with prior year data. The Division has improved data collection and reporting of demographic information for clients receiving ISM services; however, many of these clients are still included in the "Not Available" category for age, gender, race, ethnicity, employment status, and living situation. The AKAIMS client counts are unduplicated counts of "clients served" and reflect the number of clients who received services through program enrollment. These counts do not include clients who received a mental health service but were not enrolled in a program. Starting in SFY15, the AKAIMS counts of persons served reflect unduplicated client counts within and across agencies; prior year counts were unduplicated at the agency level, but duplicated across agencies if a client received services from more than one agency.</p> <p>As of SFY 19, for Community setting, counts are now based on a "client type" logic that allows reporting agencies to indicate if the individual receiving care meets specific criteria. Previously, "treated here for" criteria required the system to perform estimations to determine if the individual met priority population based on diagnosis and other criteria. Additionally, the "client type" logic accurately identifies SED/SMI clients in the 18-20 age group. DBH acknowledges the scope of reporting noted in the 2023 URS Table instructions, including the basic tenet that the scope will represent the mental health system that comes under the auspices of the SMHA. Per guidance from NRI, DBH is including API, the State Psychiatric Hospital in its URS tables where appropriate, though API is organizationally now separate from Alaska's Division of Behavioral Health, though both API (Alaska Psychiatric Institute) and DBH remain organizationally within the State of Alaska system.</p> <p>Starting in SFY16, all ISM client counts generally reflect unduplicated client counts for each agency (note: there may be duplication across agencies).</p> <p>Due to the changes in AKAIMS and ISM reporting methodology, caution is advised when making comparisons over time.</p> <p>Several of the state's larger sub-grantees are in the process of implementing a new electronic health record system. Given this situation, the client counts for those grantees may not be accurate, and may likely reflect only a subset of the total clients served in those agencies. At this point it is impossible to tell how many clients may be missing, but the division is progressing to include the full population of people served due to the implementation of the reporting database through the state's health information exchange. A handful of agencies report outside AKAIMS such as API (Alaska Psychiatric Institute) State Hospital clients, and some discretionary grant clients. In addition, State of Alaska DBH utilizes Medicaid data/clients through both its Cognos and connection to Optum Tableau sources.</p> <p>State Psych Hospital: Data source is the Alaska Psychiatric Institute (API) electronic health records system: Meditech.</p> <p>ACUTE PSYCH: Data are from the MMIS-Cognos Decision Support System (Medicaid claims data). Includes in- and out- of state clients. The unduplicated client count is based on paid Medicaid claims.</p>
ALL	<p>Age: Client Counts: For community program client counts, age is assigned as of the middle of the reporting period (e.g., SFY23= Age as of December 31st, 2022). For API, Other Psych Inpatient, and RPTC client counts (except those in Table 6), age is assigned as of the middle of the reporting period; the Table 6 clients counts have age (child vs. adult) assigned as of the date of admission.</p> <p>Age: Admissions/Discharges: For all admission and discharge counts, age is assigned on the date of admission</p>
ALL	<p>Race/Ethnicity: For community programs, Acute Psych, and RPTCs. 'Hispanic' data are collected separately from 'Race' data (i.e., two separate questions)</p> <p>For consistency in reporting on the URS tables, if there was a discrepancy between race vs. ethnicity total, the higher number was utilized and the balance was assigned to "Not Available" for alignment.</p> <p>For a few smaller data sets outside of the major DBH data sources (AKAIMS/Medicaid), for reported data that were difficult to disaggregate by one or more demographic variables, for these cases, lump sum client counts were reported, and data gaps/deficiencies were identified, so that DBH may work with providers to improve reporting in future cycles. DBH provides instruction and technical assistance to partner providers on URS data instructions/definitions/requirements to help ensure improvement, as during staff transitions or new guidance documents for URS tables</p>
3	The explanation for why T4 exceeds T3 community adult total, is that additional data from the reporting period is updated/submitted and coding issues from integrating multiple data sources remain from data programming

URS Table Number	General Notes
4	<p>Employment Status: Starting in SFY14, the methods utilized for reporting the most recent employment status changed from using the AKAIMS Admissions/Discharge data to the Client Status Review (CSR) data. The CSR is administered at admission, periodically during treatment (every 90 to 135 days), and at discharge.</p> <p>Numbers on this Table 4A may be greater than Table 4, as a client could have multiple diagnoses over the fiscal year, either from multiple episodes of care or improper data entry. Also note: Clients in Alaska's AKAIMS system have this information available (i.e. diagnosis and employment status)</p> <p>The increase in 2023 from 2022 is due to a) fuller data reporting compliance, b) changes from peak pandemic to more stable situation in 2023, c) improved outreach and efforts in serving clients with respect to employment.</p>
5A, 5B	<p>Funding Support- Medicaid Status</p> <p>For consistency in reporting across service settings, the rows reflect 'Primary' Expected Payment Source = Medicaid or Non-Medicaid. AK is not always fully able to identify clients with Medicaid only, non-Medicaid only, or both Medicaid and Non-Medicaid. For many clients, DBH is able to determine if the "primary" funding source is Medicaid or non-Medicaid. Thus in the row labeled "Medicaid only," DBH reports the number of clients with "Primary" expected payment source = Medicaid, and in the row labeled "non-Medicaid only" DBH reports the number of clients with "Primary" expected payment source is not Medicaid. DBH used the following methods for each setting:</p> <p>For community programs: In AKAIMS, the 'primary' expected payment source is collected. If the client's primary expected payment source is Medicaid, then the client is counted under Medicaid only. If the client's primary expected payment source is not Medicaid, then the client is counted under non-Medicaid only. For some smaller specialty data sources, Medicaid status was not available for SFY23, for reasons including: incomplete/confounded aggregate reporting, staff changes, and/or that the organization does not presently collect data in the needed format and fields. DBH reviews data completeness and integrity and continues to work with partner organizations to provide TA to improve future reporting. Given staff and system changes, it is evident that DBH should engage in periodic review and quality control to ensure all parties understand the requirements and have the capacity to fulfill the data obligations.</p>
6	<p>Duplicate counts potential across Community programs, residential treatment centers, and other psychiatric inpatient.</p> <p>Community admissions: Increases reflect more complete data collection as well as increased program implementation; possibly the pandemic status and its impact on service delivery and need in SFY23 vs. SFY22 also led to some of the increase in community admissions.</p> <p>LOS for State Hospital: The differences are due to the new way SAMHSA has created the age categories for SFY23. Additionally note the sample sizes are reasonable small, further making data interpretation challenging/ambiguous.</p>
7A	<p>There was an increase in State funding for other psychiatric inpatient care that caused the increase. DBH did not receiving funding from a third party that has been received in that past for Ambulatory and admin costs.</p> <p>Expenditures for ESMI/FEP increased from 2022 to 2023, due to implementation of SAMHSA C19 related funds that permitted expansion of Alaska FEP programming beyond the required minimum 10%.</p> <p>State Hospital expenditures: The State hospital opened up additional beds in FY23, some beds were closed due to COVID.</p> <p>ARP expenditures: DBH is working hard to spend remaining ARPA funds. DBH was able to get additional funding out to agencies in FY23.</p> <p>other psychiatric inpatient expenditures: Expenditures increased due to an increased need for services and additional funding availability.</p> <p>Crisis services expenditures: There was an increase in funding related to these services allowing to additional patients to be serviced.</p>
7B	<p>Expenditures for FEP increased from 2022 to 2023, due to implementation of SAMHSA C19 related funds that permitted expansion of Alaska FEP programming beyond the required minimum 10%.</p>
12	<p>Percentage of Persons Served who have a Dual Diagnosis (Co-Occurring Mental Health and Substance Abuse): For community settings, counts are now based on a 'client type' logic that allows reporting agencies to indicate if the individual receiving care meets specific criteria. Previously "treated here for" criteria required the system to perform estimations to determine if the individual met priority population based on diagnosis and other criteria. Additionally, the "client type" logic accurately identifies SMI/SED clients in the 18-20 age group.</p>
14A	<p>It is likely that clients who last year were listed as 'other', may this year have coded under the new gender categories, Trans Man, Trans Woman and Gender Nonconforming, In 2022 there were 26 listed as 'other', whereas this year there are 32 listed total under the Trans Man/Trans Woman/Gender nonconforming categories; the similar total suggests this may be the case as clients previously coded under the available 'other' option in 2022 now prefer coding under the new Trans Man/Trans Woman/Gender nonconforming categories.</p>
14B	<p>These small differences reflect clerical, data entry, and coding issues including report integration from multiple sources; they cannot be disaggregated at this point. DBH continues to work internally and with providers to ensure ever improved compliance during data collection and reporting, and continues to consider report modifications at the data entry stage that ensure regulatory compliance such as per definitions regarding race vs. ethnicity across tables.</p>

URS Table Number	General Notes
14C	<p>Since Alaska is asked to report on a SFY that concluded before the new SAMHSA guidance was released, Alaska is unable to report by all the age breakdowns on this table, and thus 0-5 and 6-12 and 13-17 are combined, 21-24, 25-44, 45-64 are combined and 65-74 and 75+ are combined.</p> <p>For community hospitals, the Age N/A value represents a sum of the following: 2,731 females, 2,279 males, 9 clients with Other gender and 316 clients with gender N/A ages 0-17; 5,378 females, 3,470 males, 19 clients with Other gender, and 276 clients with gender N/A, ages 21-64; 342 females, 201 males, and 13 clients with gender N/A, ages 65 and older.</p> <p>For Other Psychiatric Inpatient, the Age N/A value represents a sum of the following: 94 females and 85 males ages 0-17. 2 males ages 25-44.</p> <p>For Residential Treatment Centers, the Age N/A value represents a sum of the following: 116 females, 98 males, and 1 client gender N/A ages 0-17.</p>
15	<p>Better data collection compliance/more complete data collection on these variables accounts for some of the increase, along with better penetration of these services, and possibly changes in the BH landscape due to status of SFY22 vs. SFY23 with respect to the pandemic's evolution. The decrease in the "other" category may reflect re-directed data entry/more complete coding to the remaining variable categories on this table, which all show increases.</p> <p>Alaska is in the process of implementing the new SAMHSA age categories, which requires both modifications to Alaska DBH systems, as well as outreach/guidance to providers regarding instructions for the new categories.</p> <p>Alaska is aware of the new age categories, and has implemented revised programming in most Alaska DBH internal systems that needed that modification and plans to fully implement and confirm other systems that made need to ensure the needed modifications are completing aligned with the new SAMHSA guidance. In terms of ensuring fully compliant data collection from all of Alaska's subrecipient providers for the new age categories, given the new age categories were provided after the end of SFY 23, and the SFY24 is not partly completed, Alaska DBH continues to engage in education, outreach, and training with its providers to ensure all the new guidance is appropriately implemented by providers. Additional efforts may be needed in SFY25 for ever more complete compliance at the subrecipient level.</p>
16A	<p>EBP data are reported for Community Setting Only.</p> <p>In order to split the data between types of services (Supported Housing, Supported Employment, Assertive Community Treatment), the division has utilized a different data source (quarterly reports) that does not collect demographic information such as race, ethnicity, age, etc. For this reason, the total count of unduplicated persons served will not match those on table 14 and 14b. The Electronic Health Records System (AKAIMS) is able to pull total unduplicated clients by demographic; however, it does not track non-medical services with demographics at such a nuanced level. DBH suspects data in Table 16 underestimate actual counts, due to incomplete subprovider data submission, and will continue to work internally and with DBH partners towards a goal of improved data collection/submission/integrity/accuracy on this table.</p> <p>While the decrease, especially in ACT is reasonably small, and may reflect random fluctuation, it is likely that incomplete data also explains some of the decline; data for these categories are collected somewhat differently from some other table data, and thus a reasonable explanation is indeed incomplete data collection. Additional efforts at provider outreach and data compliance continue at Alaska DBH in collaboration with our providers. There is also some possibility that some of the change relates to provider decisions and client needs as the pandemic situation evolved from SFY22 to SFY23.</p> <p>Multisystemic Therapy: Alaska does not collect data in its systems to formally track this category or define it systemically for data collection; Alaska will consider modifications needed for the future and plans several new hires of programmers who may be able to assist</p> <p>Family Functional Therapy: Alaska does not collect data in its systems to formally track this category or define it systemically for data collection; Alaska will consider modifications needed for the future and plans several new hires of programmers who may be able to assist</p>
16B	<p>EBP data are reported for Community Setting Only.</p> <p>ISM information is collected differently than other table elements, and it is likely a data collection/entry/coding/completeness issue is the reason for this difference. DBH continues to work internally with its own systems and with providers to continually improve completeness and compliant data and cross-table alignment. Consumers are asked to provide self-ratings of their recovery and symptoms. If additional care is needed due to relapse or other concerns, they are connected with a clinical program to receive the needed level of care. One agency reported fidelity, EBP toolkit and EBP training the other did not.</p>

URS Table Number	General Notes
17	<p>NB: Access to Call centers, especially for small children is an estimate, and presumes child can access call center alone or with assistance of appropriate adult. Mobile and Stabilization services have evolving data collection systems; DBH plans additional outreach/alignment with staff/providers to ensure more accurate/complete data in the future. For this URS Table 16B, new last year, and SAMHSA-modified this year (and now called Table 17), Estimated Percentage of Population with Access to Service was based on available data from Alaska Department of Labor and Workforce Development (AKDOL). Estimates utilized available AKDOL population estimates provided for date 7/1/2021, indicating Alaska's total population was 734,323 (181,861 children [24.77%], and 552,462 adults [75.23%] aged 18 and over), combined with Alaska community population estimates that are served by relevant crisis services. Counts for 24/7 crisis services are not available for this reporting period, as SAMHSA introduced this after the conclusion of SFY22, and made modifications to the SFY23 Table 17 after the end of SFY23; DBH will work towards more complete data client counts of these services in future reporting periods. NOTE: AK's reported current 24/7 mobile crisis services (Anchorage/Fairbanks), are not yet fully 24/7 and AK continues to work towards more comprehensive mobile crisis coverage in terms of geography and 24/7 access. For crisis stabilization, communities included Ketchikan (youth only), Fairbanks, and Bethel/YK Census Area.</p> <p>DBH is working to improve data collection and reporting abilities relating to clients receiving EBP services. Also, until DBH is fully able to report demographics for all clients receiving specific EBP services, such client counts in Table 17 are included in the "Not Available" category for age/gender/race/ethnicity (as requested by the BHSIS Project Office/SAMHSA). DBH continues to communicate with DBH research and program manager/clinical staff, as well as with providers to ensure better that relevant persons and organizations understand their obligations and the required elements needed. Such TA may include email/phone calls to share and interpret URS guidance documents such as data definitions/instructions.</p>
20A	<p>Readmitted within 30 days and 180 days: Improved care coordination and enhanced discharge planning for patients upon discharge have played a pivotal role in reducing our 30-day readmission rates. Our efforts now include scheduling follow-up appointments before discharge and proactively addressing transportation needs to ensure patients can attend their appointments successfully.</p>
20B	<p>Readmission within 30 days and 180 days: Improved care coordination and enhanced discharge planning for patients upon discharge have played a pivotal role in reducing our 30-day readmission rates. Our efforts now include scheduling follow-up appointments before discharge and proactively addressing transportation needs to ensure patients can attend their appointments successfully.</p>
21	<p>Per the 2023 URS instructions, this Table 21 is optional, and DBH is not reporting on it this year.</p>
