In addition to the statutory requirements for schools, it is recommended that each participating school establish a committee with representation from each of the primary health care disciplines for the purpose of: (1) informing students about the primary health care specialties and the PCL program; (2) providing counseling assistance to students; (3) providing input to the student selection process; and (4) providing program assessment and recommendations for improvement.

Additional Information

If additional programmatic information is needed, please contact:
Mr. Michael Henningburg, Director,
Division of Student Assistance, Bureau of Health Professions, Health Resources and Services Administration, Parklawn Building, room 8A-46, 5600 Fishers Lane, Rockville, Maryland 20857. Telephone: (301) 443-1173.

Robert G. Harmon,
Administrator.

National Institutes of Health

National Institute of Mental Health; Meeting

The Division of Extramural Activities of the National Institute of Mental Health announces an ad hoc concept review. This committee will be performing review of a Request for Applications entitled "Neuropsychological Test Performance in HIV/AIDS".

This meeting will be held June 1, 1993, from 2:30 p.m. to adjournment, in Room 15–95, Parklawn Building, 5600 Fishers Lane, Rockville, Maryland 20857, and will be open to the public.

Attendance by the public will be limited to space available. Any person wishing to attend should notify the contact person by May 24, 1993.

Other information pertaining to the meeting may be obtained from the contact person indicated.

Committee name: Ad Hoc Concept Review Committee.
Contact: Jean G. Noronha, Ph.D., Room 9C-15, Parklawn Building, Telephone: 301-446-6470.
Meeting date: June 1, 1993.
Place: Room 15-95, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857.
Open: June 1, 2:30 p.m. to adjournment. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should contact the contact person named above in advance of the meeting.

Substance Abuse and Mental Health Services Administration

Center for Mental Health Services
ACTION: Final notice.

SUMMARY: This notice establishes final definitions for: (1) Children with a serious emotional disturbance, and (2) adults with a serious mental illness. It also describes the proposed process for developing standardized methods for identifying and estimating the size of these two populations within each State. This action is being taken to comply with the requirements of Public Law 102-321, the ADAMHA Reorganization Act, which amends and supersedes Public Law 99-500. The definitions will affect State agencies (the recipients of Federal block grant funds for mental health services) and are necessary because the new law requires States to include incidence and prevalence estimates of the two populations as part of the State application for a Community Mental Health Services Block Grant award. The definitions are intended to encourage comprehensive planning for mental health services at the State level which will address the multiple needs of both these populations, whether or not the State agency is the provider of the planned services.

EFFECTIVE DATE: Immediately. It is the view of this Department that delaying the effective date for a period of thirty days is unnecessary and contrary to the public interest, and therefore this rule is effective immediately. This rule provides definitions for States and is necessary for State applications for Community Mental Health Services Block Grants. No party will be adversely affected by the immediate implementation of these definitions, whereas a delayed effective date will hinder comprehensive planning for mental health services by States. In any event, the provisions of 5 U.S.C. 553(d) do not apply since this rule relates to a grant program.

FOR FURTHER INFORMATION CONTACT:
Irene S. Levine, Ph.D., Deputy Director, Center for Mental Health Services, (301) 443-0001.

Background

Public Law 102-321, the ADAMHA Reorganization Act, was enacted on July 10, 1992. This law, which amended the Public Health Service Act, created the Substance Abuse and Mental Health Services Administration (SAMHSA). The Center for Mental Health Services (CMHS) was established within SAMHSA to coordinate Federal efforts in the prevention and treatment of mental illnesses and the promotion of mental health. Title II of Public Law 102-321 establishes a Block Grant for Community Mental Health Services, which is administered by the SAMHSA. This grant is designed to allocate Federal funds to States for the provision of community mental health services to both children with a serious emotional disturbance and adults with a serious mental illness. Definitions of the terms "children with a serious emotional disturbance" and "adults with a serious mental illness" and establishment of standardized methods for identifying each of these two populations are required as part of the implementation process for the new block grant.

Summary of Comments

This document reflects a thorough review and analysis of comments received in response to two previous notices published in the Federal Register, one on August 21, 1992 (p. 37979), the other on November 6, 1992 (p. 53118).

Nearly 1,200 letters were received by the close of the public comment period, expressing either support or concern regarding the proposed definitions. Those expressing support generally praised the breadth of the proposed definitions; many of these letters were poignant in that they cited instances where individuals were denied services because their disorders were not considered "serious" despite the fact that they were associated with functional impairments that substantially interfered with or limited the performance of one or more major life activities. This segment of the respondents favored broad definitions and suggested that service priorities be established by States (with input from...
This page contains a discussion on the definitions and criteria for mental health disorders, specifically focusing on the concept of serious mental illness (SMI) as per the Diagnostic and Statistical Manual of Mental Disorders (DSM-III-R). The text highlights the importance of these definitions in determining eligibility for services and programs.

**Serious Mental Illness (SMI)**

The page discusses the importance of mental health criteria that are used to identify individuals for mental health services. It mentions the Federal block grant funds and the need to focus on adults as the priority for services. The definitions of SMI are discussed in the context of the need for a standardized approach to measure seriousness in mental health conditions.

**Definitions and Criteria**

- **Severity Criteria**: Some comments urged that severity criteria be added to each definition. Initial criteria were broad but states will be able to develop an accurate description of the population in need of mental health services.

- **Duration Criteria**: Some comments suggested that duration criteria be added to each definition. Duration criteria must be broad enough so that states will be able to develop an accurate description of the population in need of mental health services.

- **Inclusion of Attention Deficit Disorder (ADD)**: Some comments suggested the inclusion of ADD in the definition of serious mental illness. The severity of ADD impairment must be operationally defined during the process of developing standardized methods for estimation.

**Biological and Social Definitions**

The biological definitions of serious mental illness are focused on the etiology and neurobiological components. The text discusses the importance of these definitions in identifying neurobiological involvement in given disorders.

**Need for Cultural and Ethnic Sensitivity**

Concerns were raised that the definitions of serious mental illness may not be sensitive to cultural and ethnic conceptions of illness. Most populations are largely comprised of adults, so the priority for services is on adults. The definitions may not be inclusive of children, but the severity of functional impairment must be operationally defined to include children and serious mental illness in adults.

**Inclusion of Attention Deficit Disorder (ADD)**

Concerns were raised about the inclusion of ADD in the definition of serious mental illness. The severity of ADD impairment must be operationally defined to include children and serious mental illness in adults. The definitions may not be inclusive of children, but the severity of functional impairment must be operationally defined to include children and serious mental illness in adults. The definitions may not be inclusive of children, but the severity of functional impairment must be operationally defined to include children and serious mental illness in adults.

**Inclusion of Alzheimer's Disease**

Numerous concerns were raised about the inclusion versus exclusion of individuals with Alzheimer's disease in the definition. The group of letters to the

The definitions may not be inclusive of children, but the severity of functional impairment must be operationally defined to include children and serious mental illness in adults.

**Inclusion of Alzheimer's Disease**

Numerous concerns were raised about the inclusion versus exclusion of individuals with Alzheimer's disease in the definition. The group of letters to the
supporting inclusion noted that individuals with Alzheimer's disease often "fall through the cracks of the treatment system," despite the needs of those afflicted, for mental health services to deal with the psychiatric sequelae of this disabling disorder. Another group of comments noted that Alzheimer's disease is excluded from the definition for persons subject to Pre-admission Screening and Annual Resident Review (PSARR) under the Omnibus Budget and Reconciliation Act (OBRA) for 1987, as well as from the definition of adults with serious mental illness found in the nursing home provisions of OBRA for 1990. These letters suggested that inclusion of Alzheimer's disease in the definition of adults with serious mental illness might inadvertently be used as a rationale for denying coverage under OBRA. Because of the strong clinical rationale for inclusion, the definition includes the diagnosis of Alzheimer's disease. It should be noted, however, that this inclusion is not intended to confer or deny coverage under OBRA to individuals otherwise eligible for that coverage.

Exclusion of Substance Use Disorders

Many comments correctly pointed out that substance use plays a strong role in exacerbating mental, emotional, and behavioral disorders and particularly increases the risk for serious emotional disturbance in children and adolescents. Also, some comments accurately noted that substance use disorders are included as diagnosable mental disorders in DSM-III-R.

Nevertheless, the decision to exclude substance use disorders from these definitions is based primarily on the fact that the Federal Government (through the Center for Substance Abuse Treatment) administers a separate substance abuse treatment block grant intended to fund treatment and prevention services to the States. Separate needs assessment procedures are required by the Congress to govern award of these substance abuse funds. If substance use disorders were included in these definitions, needs assessment activities required by the two newly separated mental health and substance abuse block grant programs of the two Centers would significantly overlap. We also believe that Congress did not intend that the limited funds now available to States under the Community Mental Health Services Block Grant be used to fund substance abuse services in the absence of a diagnosable mental disorder.

Finally, it should be noted that given the frequent co-occurrence of mental and substance use disorders and the need to provide better integrated care for individuals within this population, this exclusion does not apply to individuals who meet all other criteria set forth in these definitions and have a co-occurring substance use disorder. This latter group is included in the target definitions and applicants for Community Mental Health Services Block Grant funds will be encouraged to serve these individuals.

Exclusion of Developmental Disorders

Comments were also received concerning the exclusion of developmental disorders (including mental retardation and pervasive developmental disorders). Although these disorders are included within DSM-III-R, they have been excluded from this final notice unless they co-occur with another diagnosable serious emotional disturbance or serious mental illness. While comments received cited the frequent involvement of mental health practitioners in treatment planning and service delivery for these individuals (particularly autistic children), the separate Federal block grant funds and processes for needs assessments cover these population groups.

Exclusion of "V" Codes

Concerns were raised as to whether or not DSM-III-R "V" Codes should be included in these definitions. These have been excluded in the final definition because they represent conditions that may be a focus of treatment but are not attributed to a mental disorder.

Exclusion of "At Risk" Groups

Persons at risk for serious emotional disturbance or mental illness are not included in these definitions. Mental health needs are shaped by a multitude of forces, including biology, environment, and life events. It is recognized that serious emotional disturbance or mental illness occurs more predictably in the presence of certain risk factors. These factors include, but are not limited to, homelessness; family history of mental illness; physical or sexual abuse or neglect; alcohol or other substance abuse; HIV infection; chronic and serious physical or developmental disability or illness; heavy and/or persistent substance use; and, in children, multiple out-of-home placements. Nevertheless, in our deliberations, the importance of approaching the needs of children and adolescents within a developmental context was stressed. Prevention and early intervention services should focus on people experiencing any of these risk factors. It should be noted that people with specific combinations of risk factors are at much higher risk for serious emotional disturbance or mental illness.

Congruence of the Child Definition With Other Federal Definitions

Concern was also expressed that the definition of "serious emotional disturbance" in children should be congruent with the definitions of other Federal agencies and/or departments, particularly the U.S. Department of Education (DOE), which uses the identical term in the regulations implementing part B of the Individuals with Disabilities Education Act (IDEA). This was felt to be important since the same children often seek various types of services from different agencies.

While it makes sense that definitions used by Federal child-serving agencies conform to one another, the fact that identical terms may be used for different purposes should be kept in mind.

The definition used in this final notice is broader than the definition used in part B of IDEA. Thus, children who are considered seriously emotionally disturbed under this definition could be classified as having a different impairment under part B of IDEA. For example, certain children with attention deficit disorder considered "seriously emotionally disturbed" under this definition, would be considered "other health impaired" under part B of IDEA.

In this regard, it should be noted that meeting the criteria for a "serious emotional disturbance" under this definition does not confer eligibility for special education services funded through DOE under IDEA. Children accepted for IDEA services under the category of "Serious Emotional Disturbance" must meet specific IDEA criteria. Because of the incongruity between these two Federal definitions, any referrals from States, local, or private educational agencies for IDEA services should not be made using the "serious emotional disturbance" designation developed under this statute. Referrals to these educational agencies may use DSM-III-R terminology.

Standardized Methods for Estimation

The definitions presented here will serve as the basis for developing standardized estimation methodologies by each State to determine the prevalence and incidence of serious mental illness in adults and serious emotional disturbance in children and adolescents. Although the definitions
are being made available now, it is not anticipated that the estimation methodologies will be developed and available for use by States in time for the fiscal year (FY) 1994 Community Mental Health Services Block Grant applications. Thus, while States are encouraged to utilize these new definitions in FY 1994 applications, they will not be required to do so until the estimation methodologies have been developed and disseminated.

The estimation methodologies for "adults with a serious mental illness" and "children with a serious emotional disturbance" will be developed by two separate groups of technical experts who will operationalize the key concepts in each definition on the basis of available data sets. The CMHS will continue to consult with the National Institute of Mental Health and other relevant Federal agencies in operationalizing these definitions. As noted earlier, a key activity of each group will be to develop operational measures for functional impairment. The goal will be to develop overall prevalence and incidence rates for socio-demographic subgroups that can be applied to respective population counts for a State in order to produce final State estimates. If relevant data sets are not available to achieve this goal, then the technical experts will recommend a plan and timetable through which such data can be collected.

**Definitions**

**Definition of Children With a Serious Emotional Disturbance**

Pursuant to section 1912(c) of the Public Health Service Act, as amended by Public Law 102-321, "children with a serious emotional disturbance" are persons:

- From birth up to age 18,\(^1\)
- Who currently or at any time during the past year,\(^2\)
- Have had a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within DSM-III-R.\(^3\)

\(^1\)The definition of serious emotional disturbance in children is restricted to persons up to age 18. However, it is recognized that some States extend this age range to persons less than age 22. To accommodate this variability, States using an extended age range for children's services should provide separate estimates for persons below age 18 and for persons aged 18 to 22 within block grant applications.

\(^2\)The reference year in each of the definitions refers to a continuous 12-month period because this is a frequently used interval in epidemiological research and because it relates closely to commonly used planning cycles.

\(^3\)It is anticipated that the fourth edition of the American Psychiatric Association Diagnostic and Statistical Manual of Mental Disorders, or DSM-IV, will be published and available in late 1993 or early 1994. The tenth revision of the International Classification of Diseases (ICD-10), developed by the World Health Organization, was published in 1992, but will probably not be officially adopted in the United States until late in the 1990's. These revised nomenclatures are likely to affect both the language of mental disorders and the types of disorders currently included or excluded from these definitions. As appropriate, the definitions will be updated by CMHS accordingly.

**Definition of Adults With a Serious Mental Illness**

Pursuant to section 1912(c) of the Public Health Service Act, as amended by Public Law 102-321, "adults with a serious mental illness" are persons:

- Age 18 and over,\(^1\)
- Who currently or at any time during the past year,\(^2\)
- Have had a diagnosable mental, behavioral, or emotional disorder of sufficient duration to meet diagnostic criteria specified within DSM-III-R.\(^3\)
- That has resulted in functional impairment which substantially interferes with or limits one or more major life activities.\(^4\)

These disorders include any mental disorders (including those of biological etiology) listed in DSM-III-R or their ICD-9-CM equivalent (and subsequent revisions), with the exception of DSM-III-R "V" codes, substance use disorders, and developmental disorders, which are excluded, unless they co-occur with another diagnosable serious mental illness. All of these disorders have episodic, recurrent, or persistent features; however, they vary in terms of severity and disabling effects.

Functional impairment is defined as difficulties that substantially interfere with or limit role functioning in one or more major life activities including basic daily living skills (e.g., eating, bathing, dressing); instrumental living skills (e.g., maintaining a household, managing money, getting around the community, taking prescribed medication); and functioning in social family, and vocational/educational contexts. Adults who would have met functional impairment criteria during the referenced year without the benefit of treatment or other support services are considered to have serious mental illnesses.

Joseph R. Leone, Acting Deputy Administrator, Substance Abuse and Mental Health Services Administration.
