Federal Workplace Drug Testing Program

NLCP Drug Testing Results

Presented by

LCDR Eugene D. Hayes, Ph. D., M.B.A.

Division of Workplace Programs

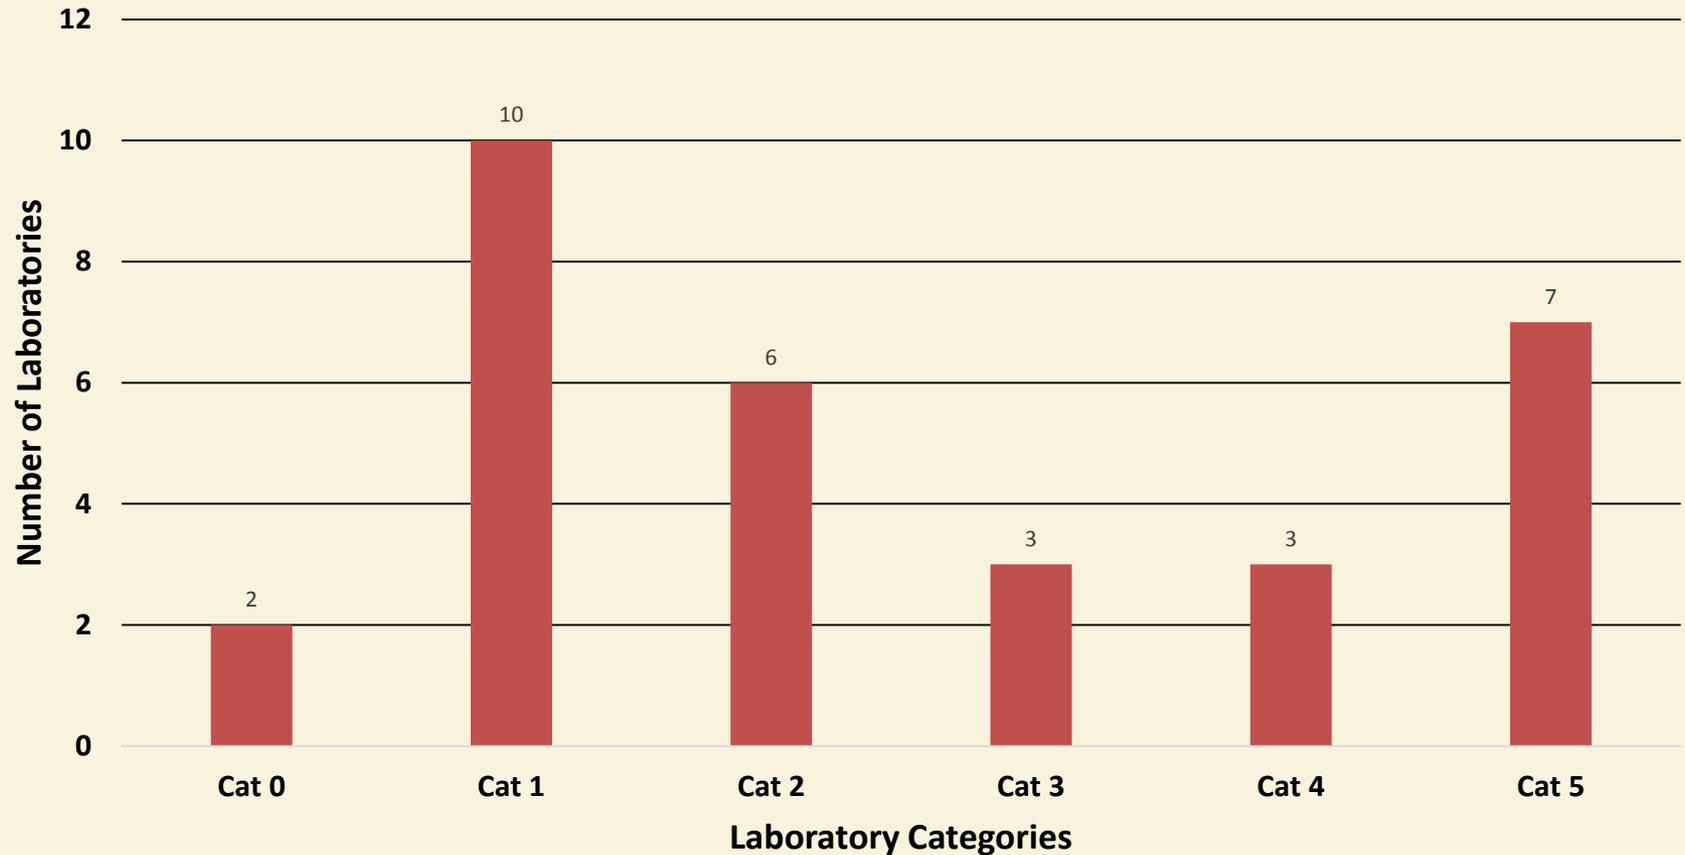

Drug Testing Advisory Board (DTAB)

Meeting

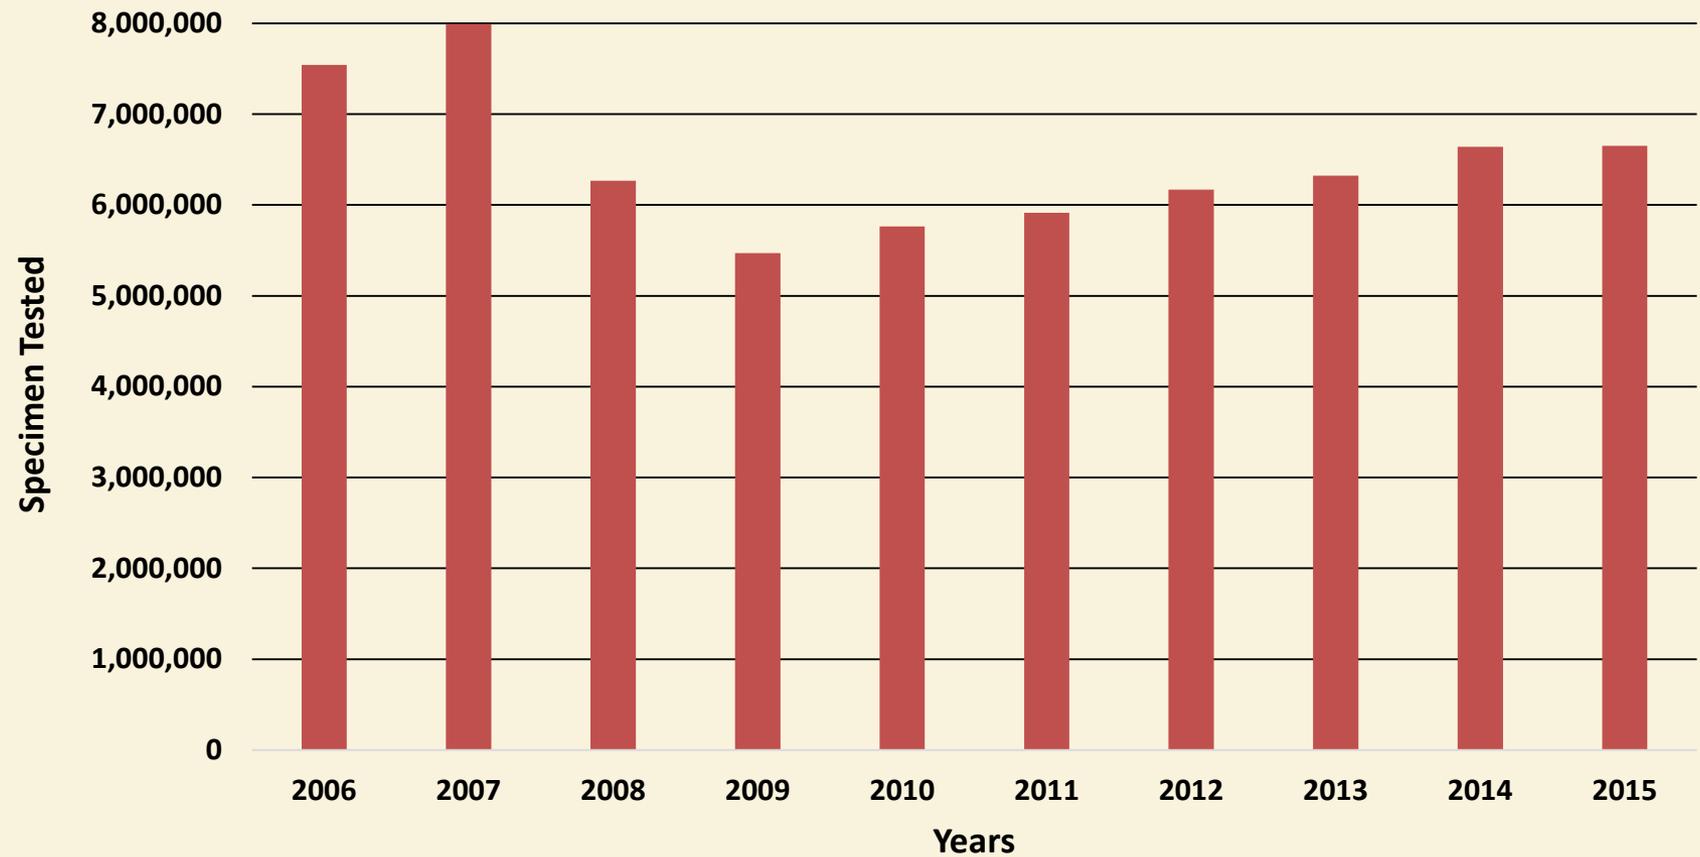

May 20, 2016

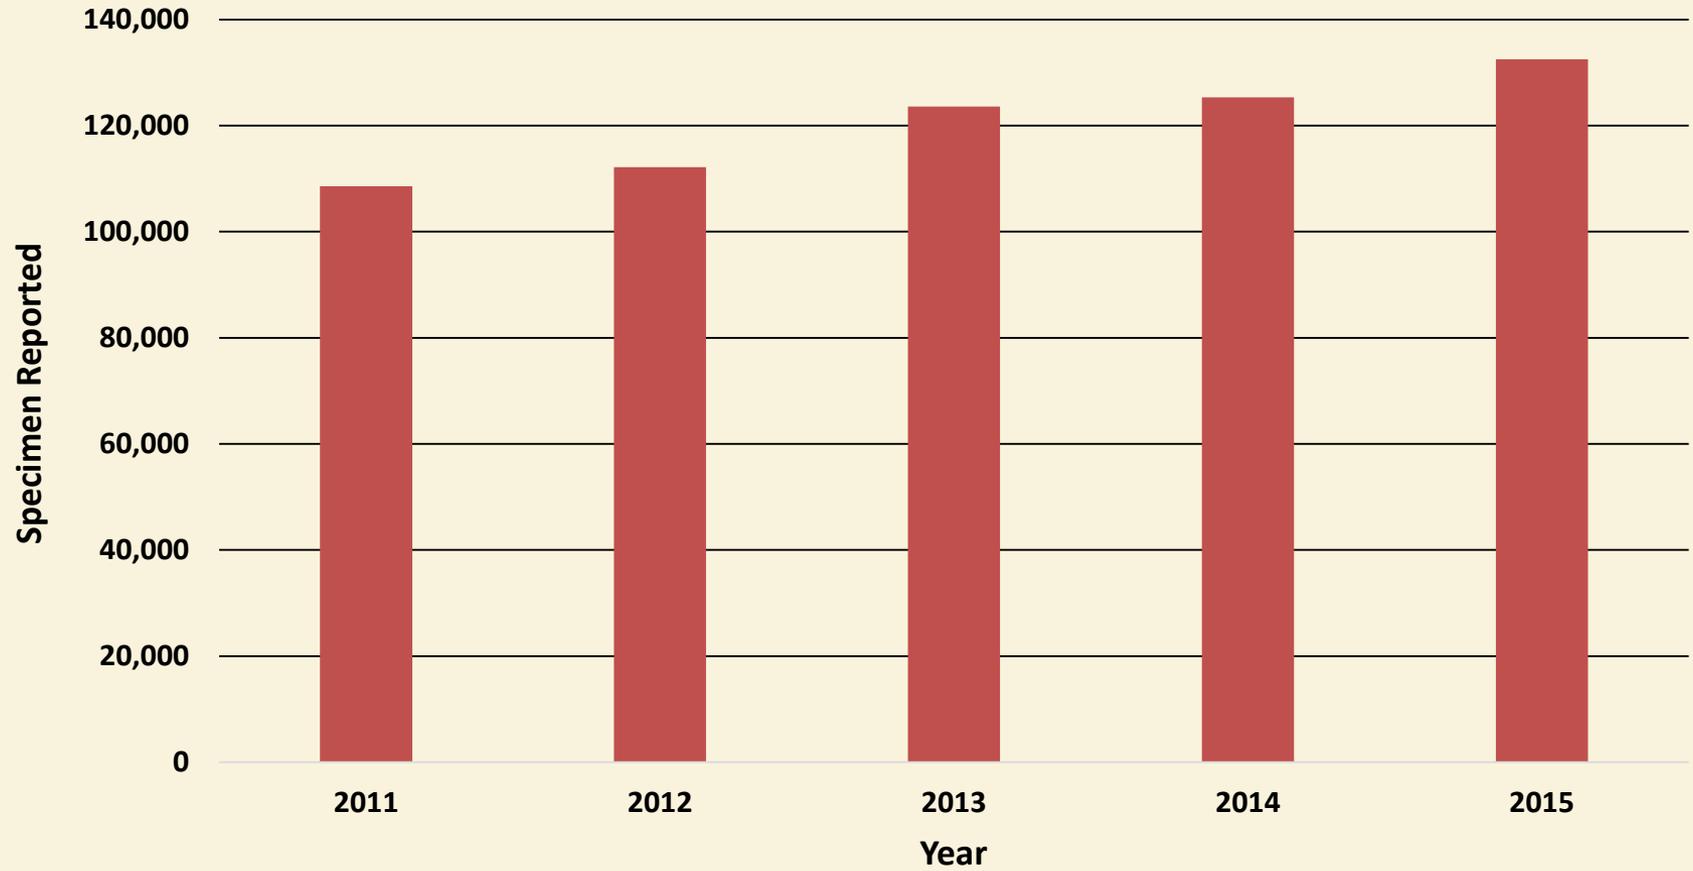

NLCP Laboratory Distribution: May 2016

Regulated Specimens Tested 2006 through 2015

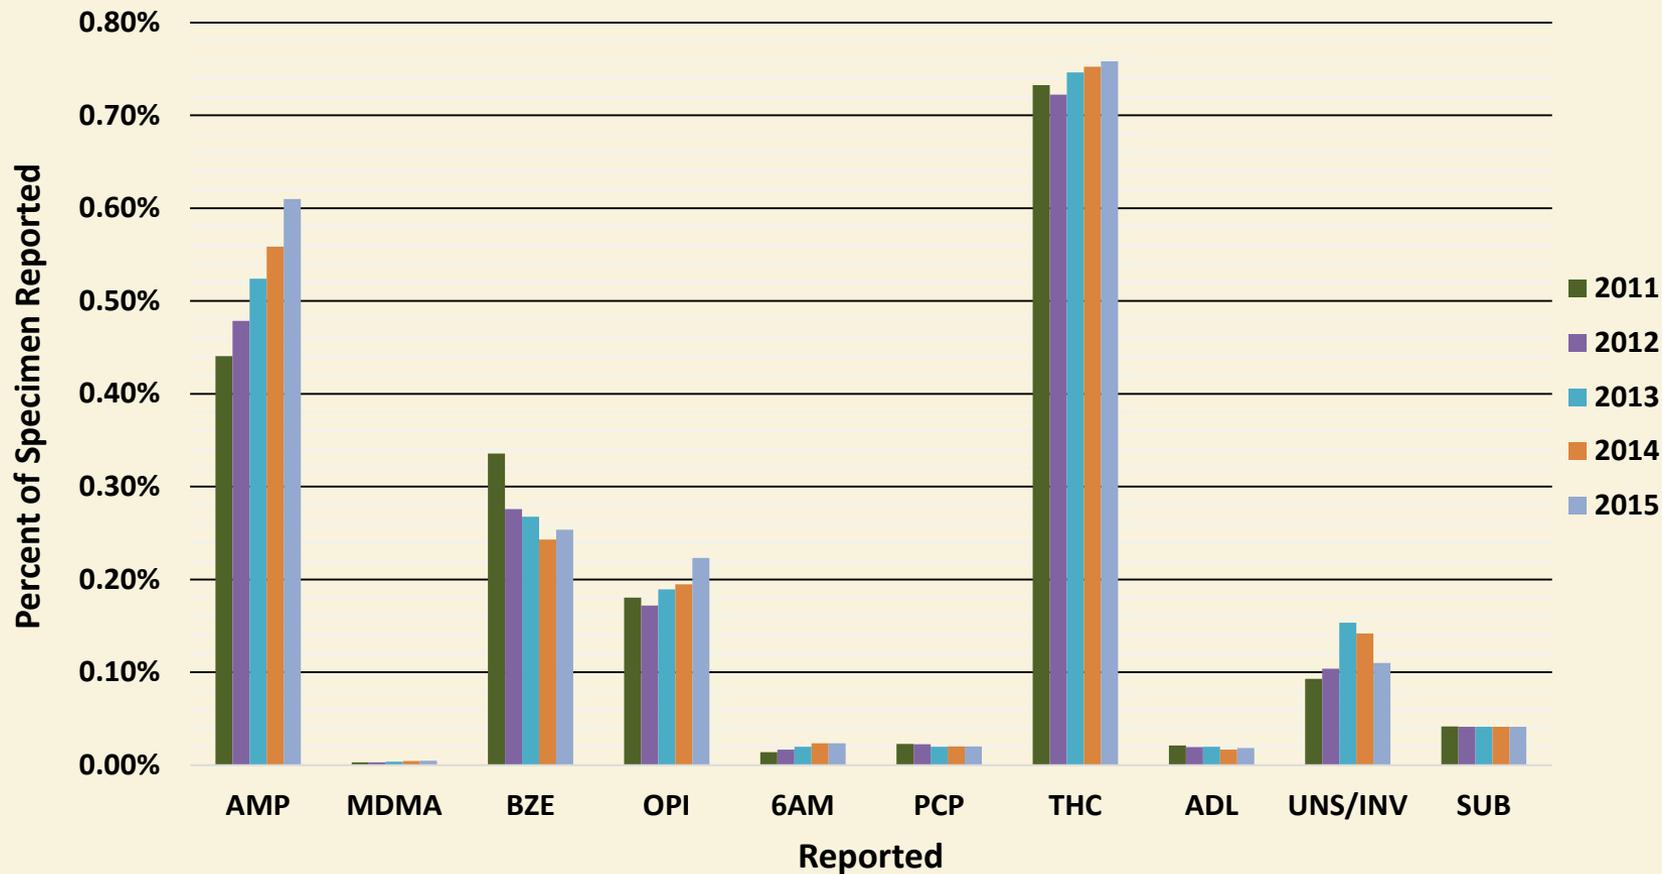

Regulated Specimens Reported as Positive, Adulterated, Invalid or Substituted 2011 through 2015

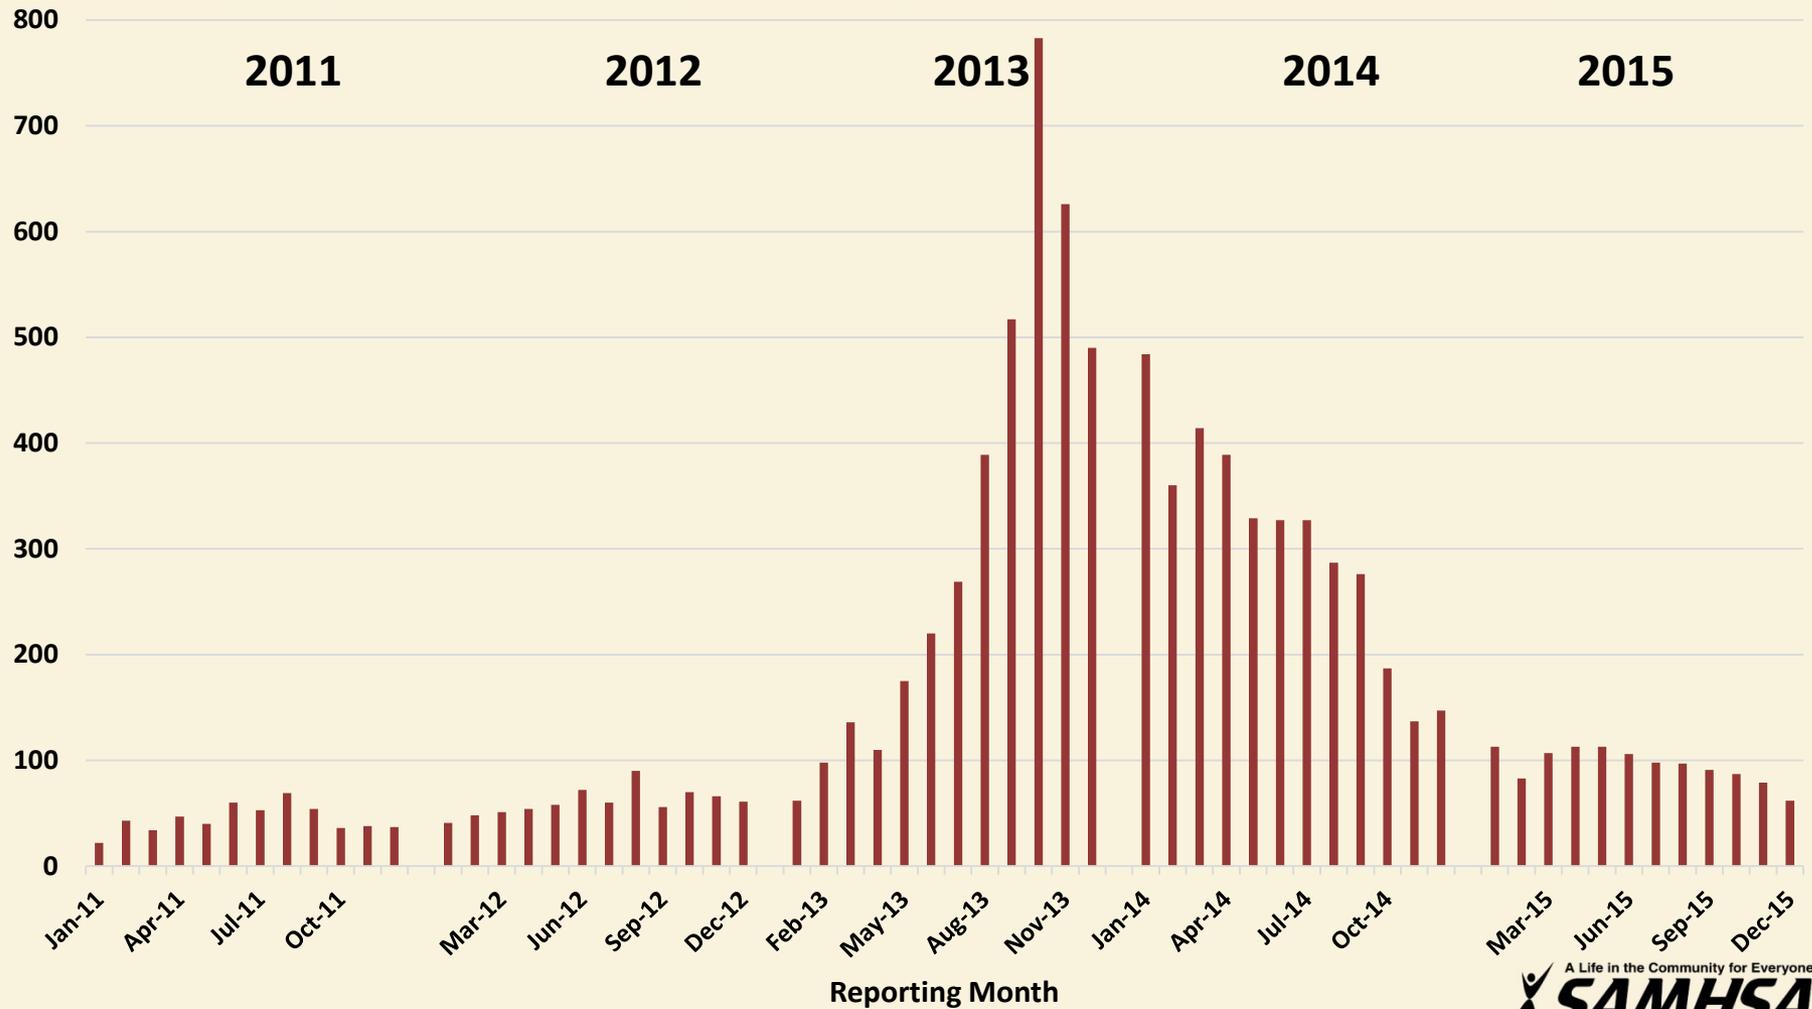

Distribution of Specimens Reported

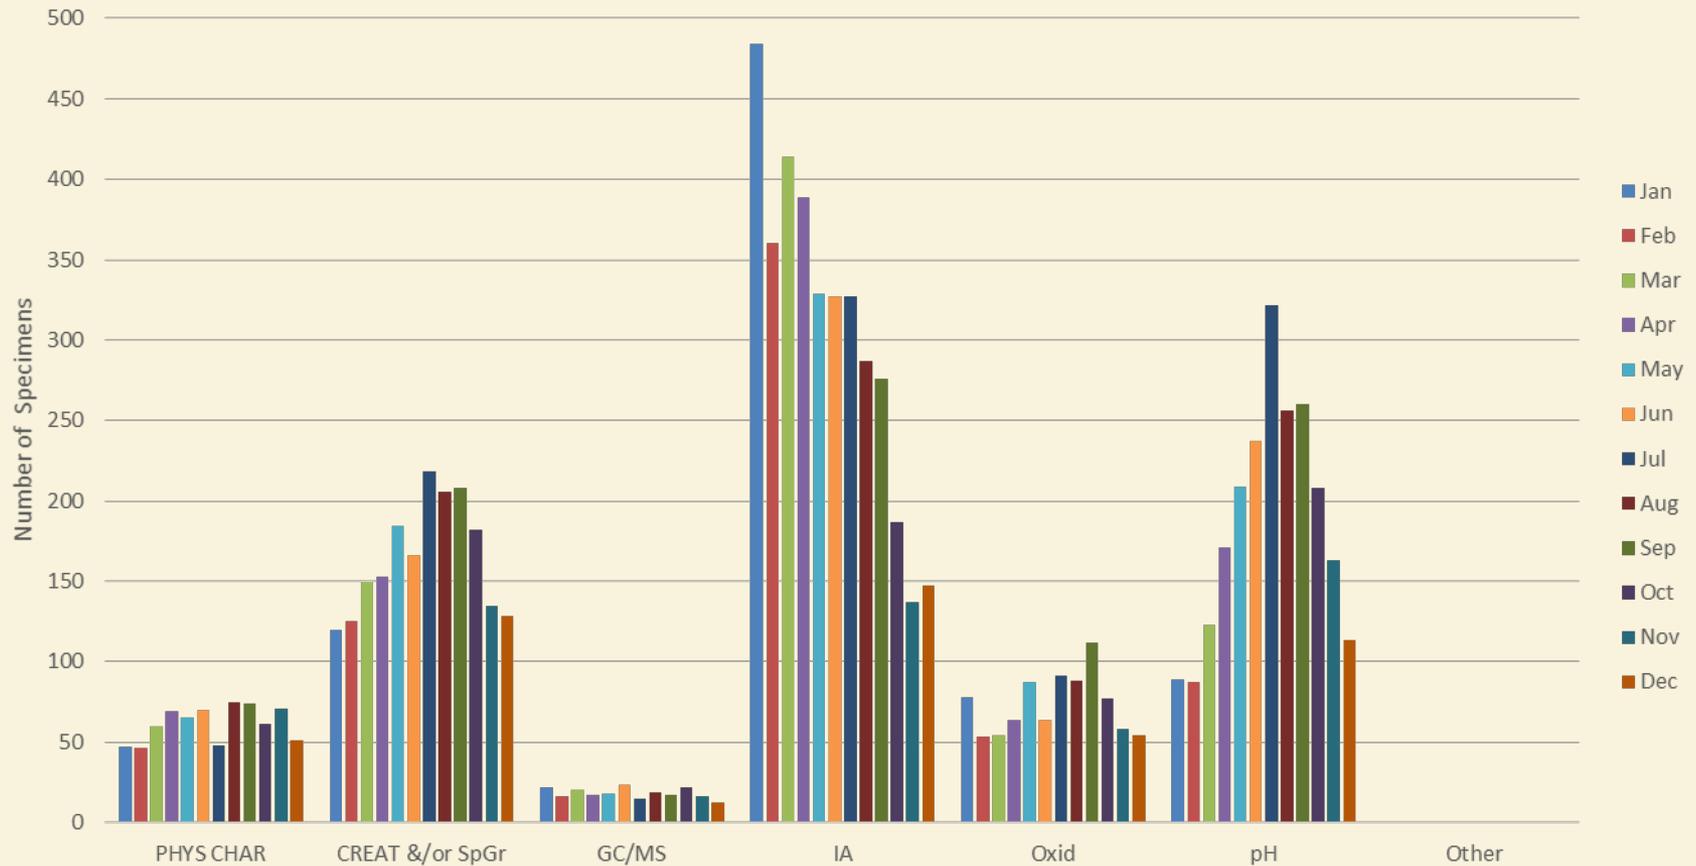

as Drug Positive, Adulterated, Invalid or Substituted
2011 through 2015

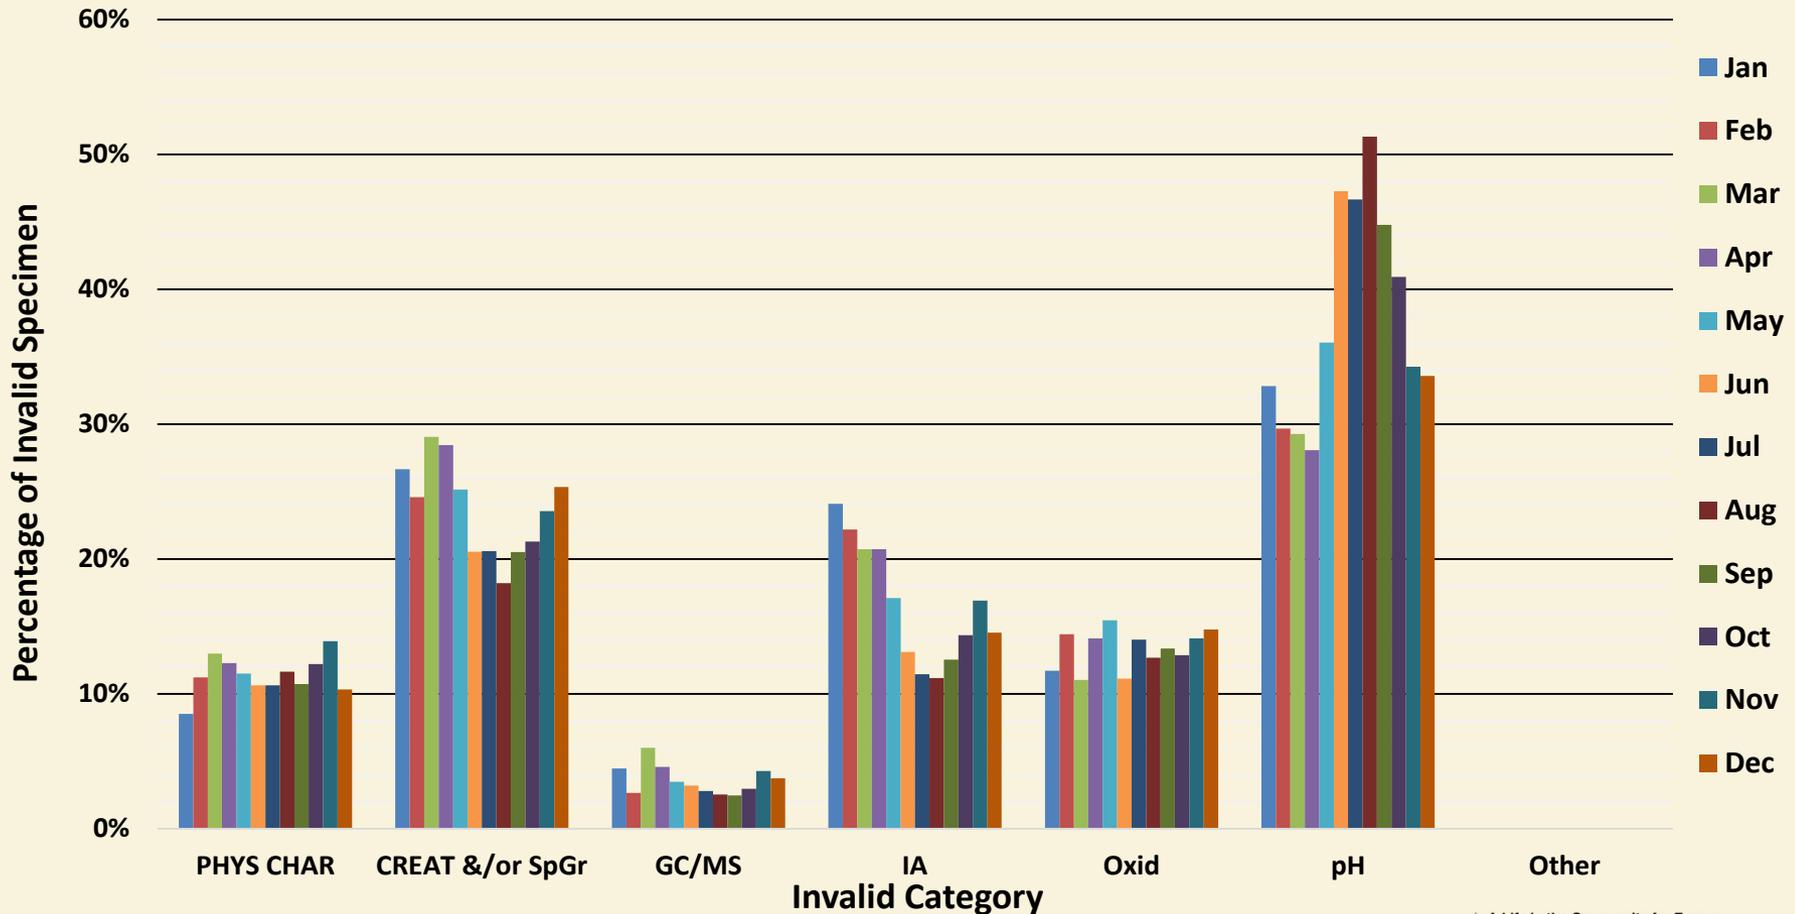

Specimens Reported Invalid Due to Immunoassay Interference: 2011-2015

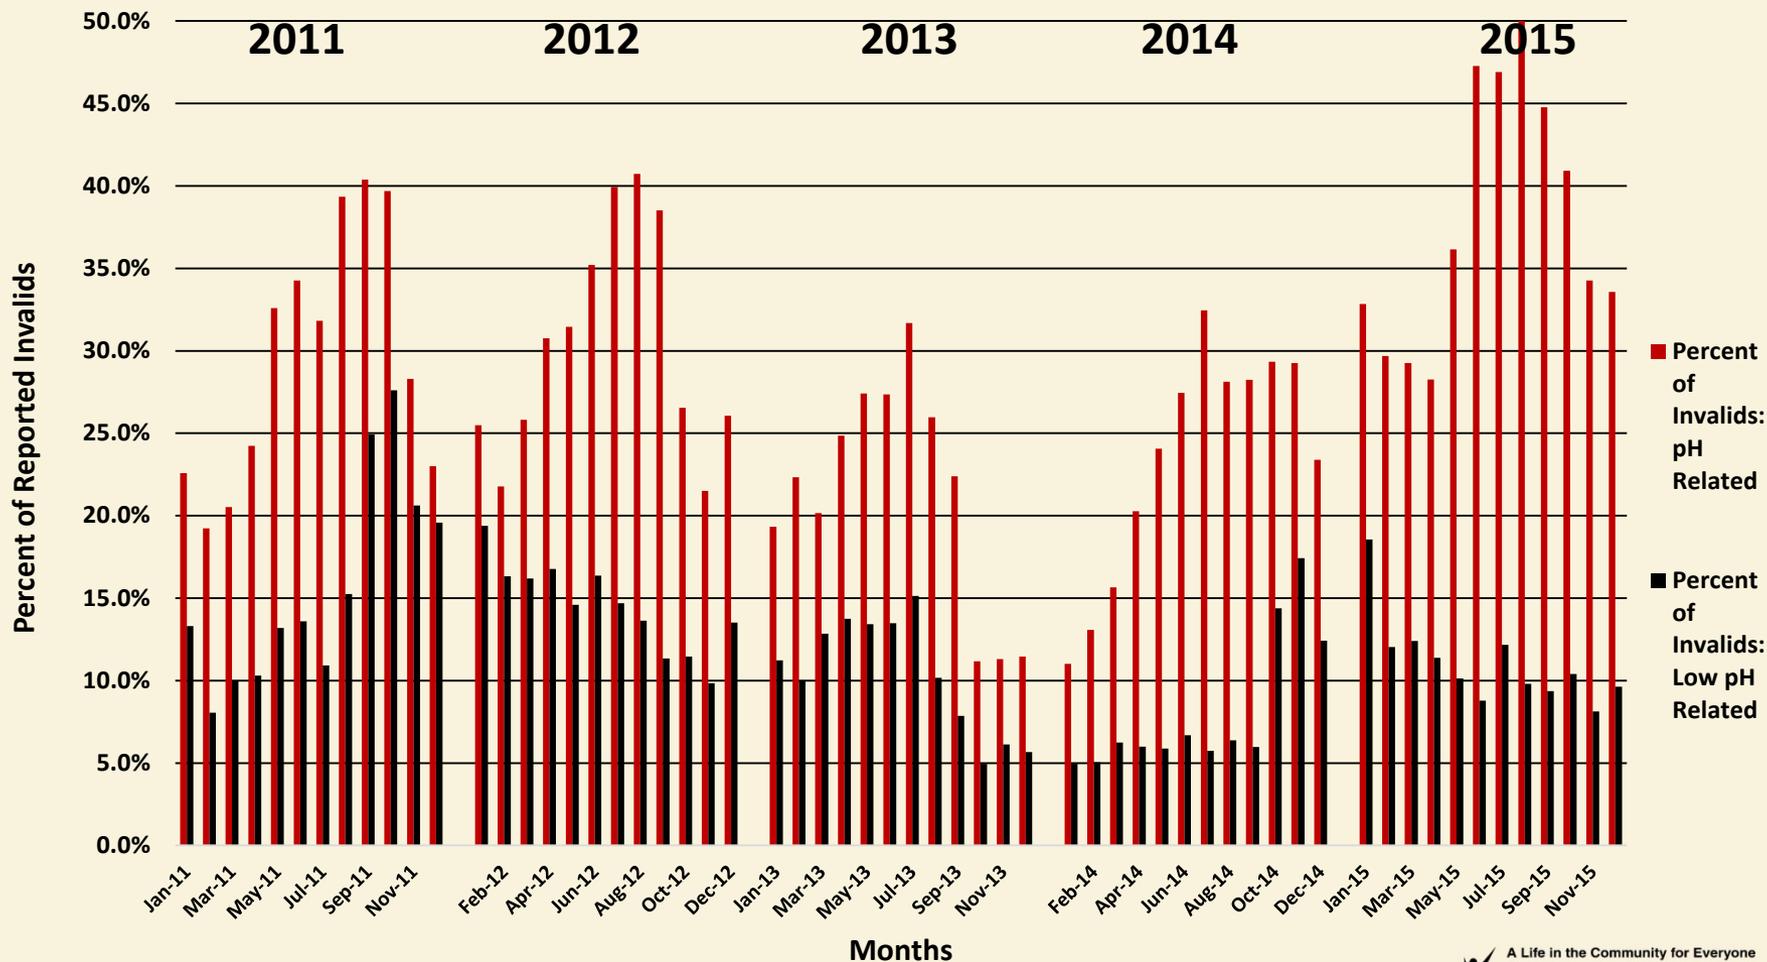

2015 Number of Invalid Specimens

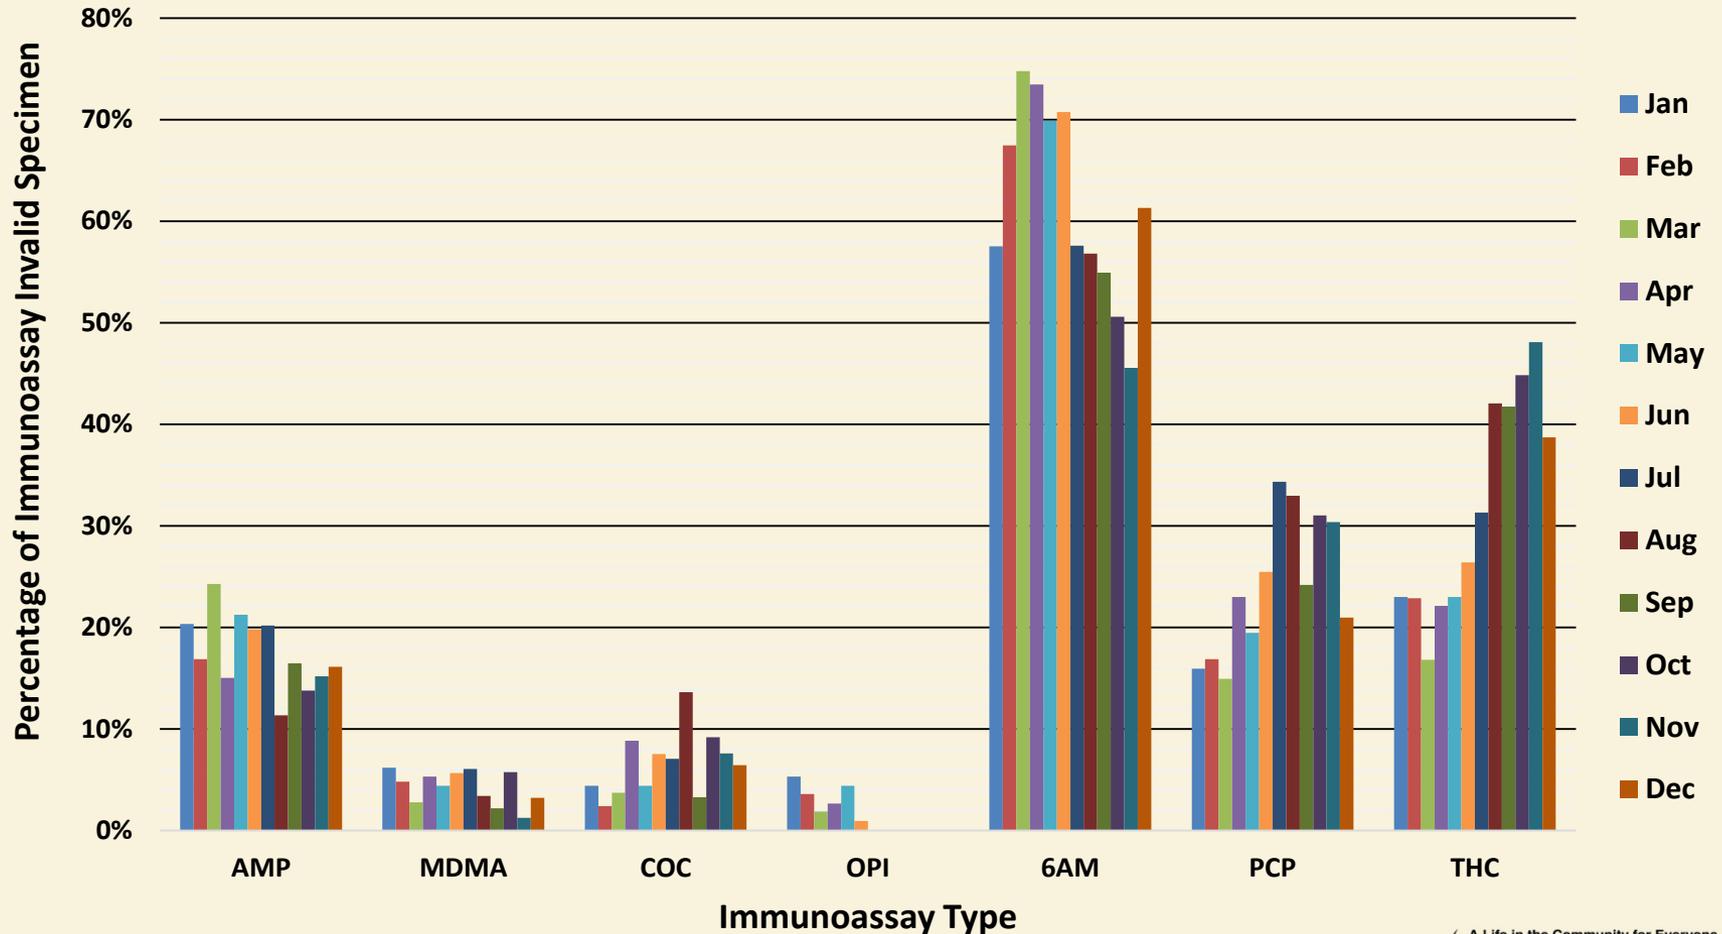

Specimens Reported Invalid by Category: 2015

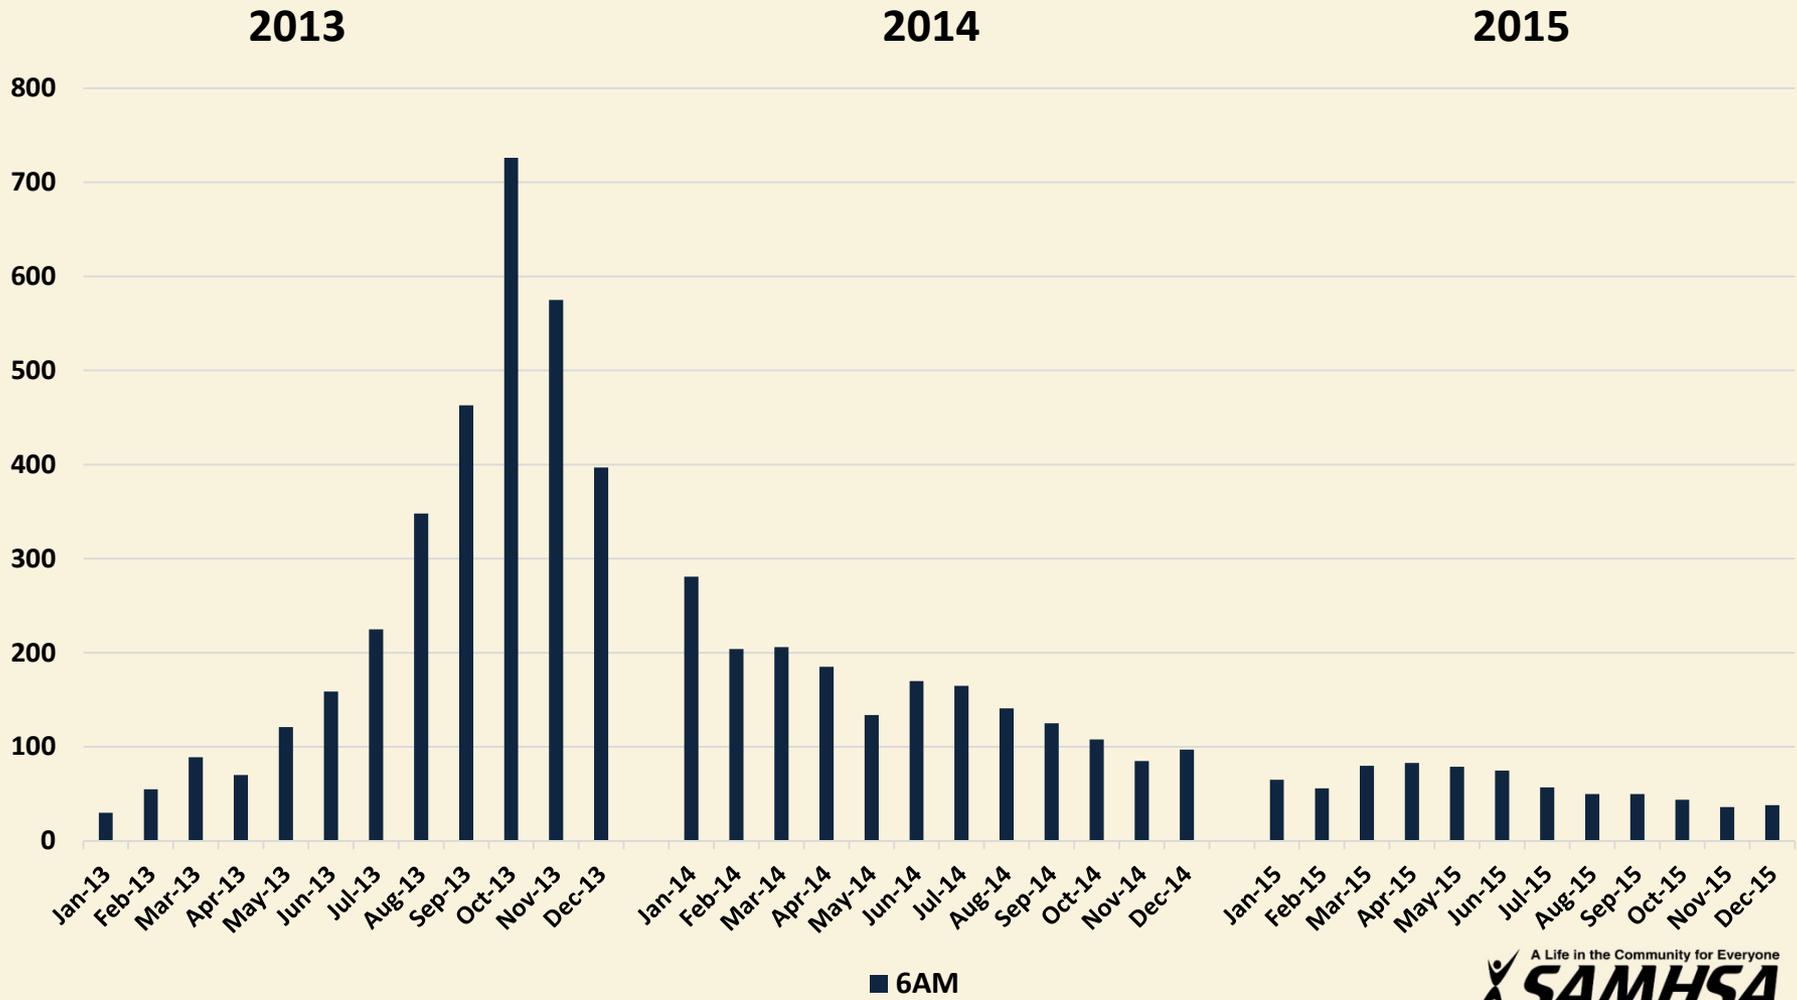

Specimens Reported Invalid for pH 2011 through 2015

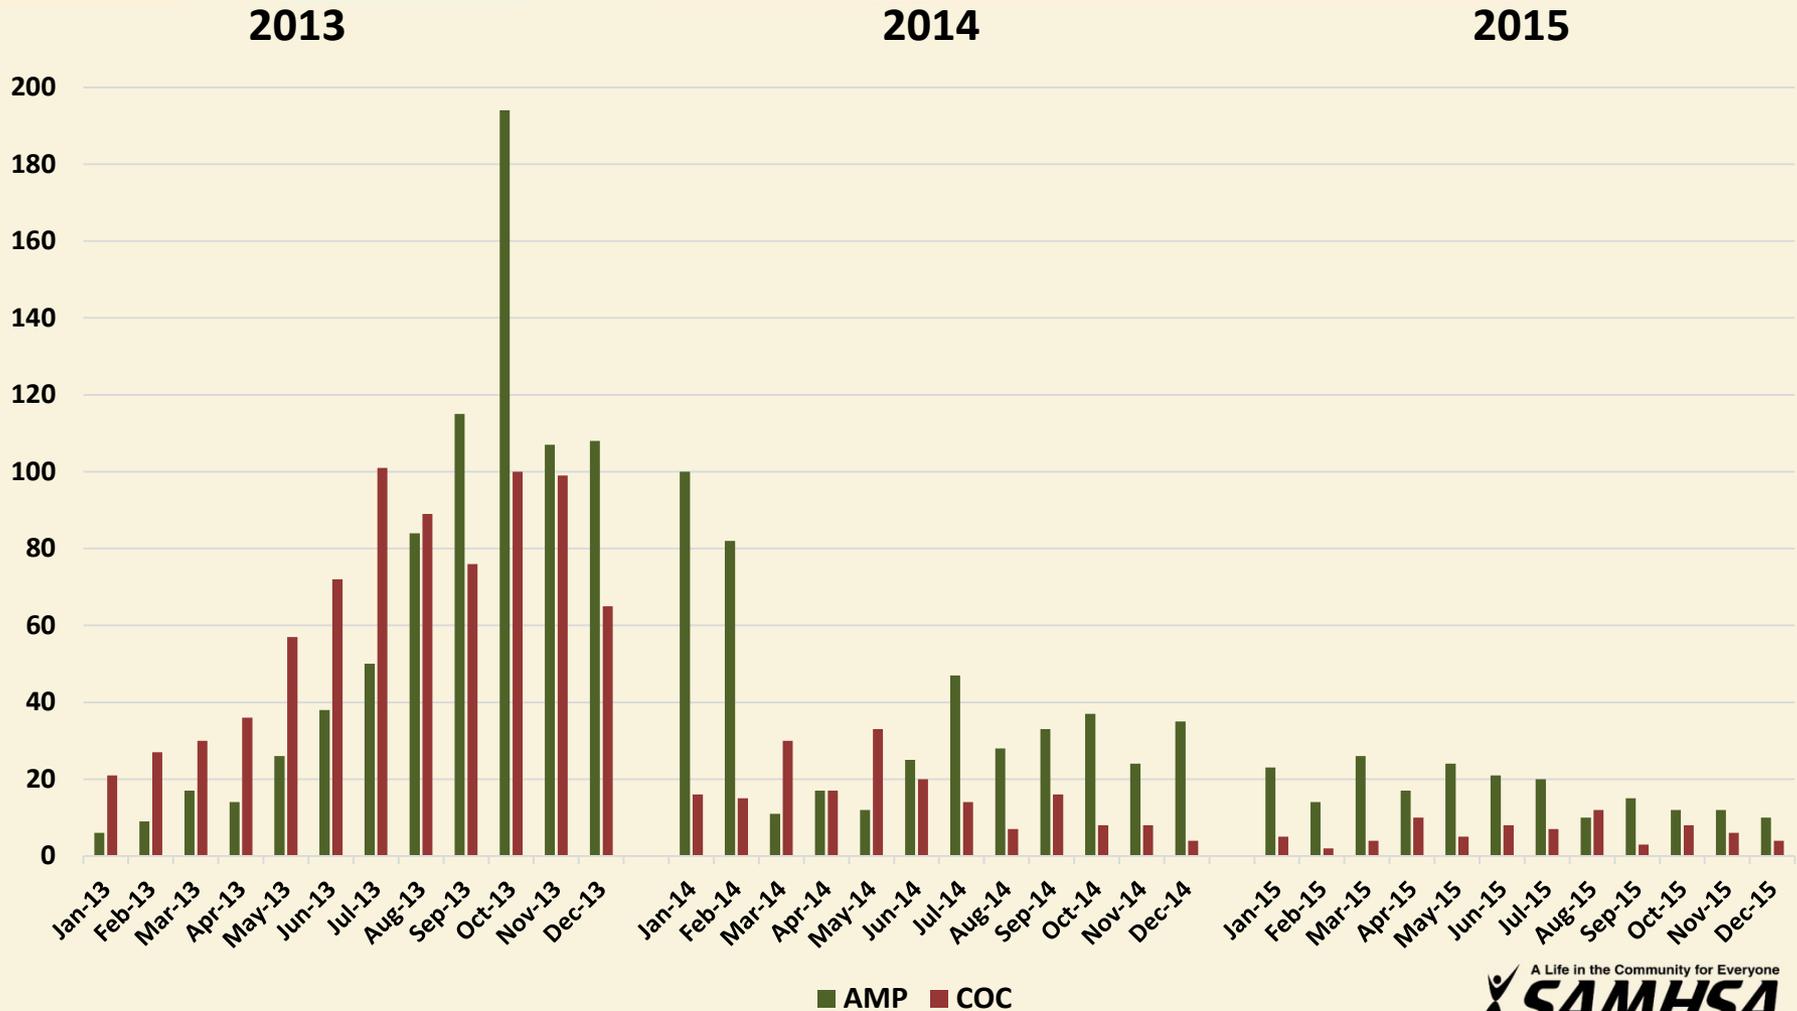

Specimens Reported Invalid Due to Immunoassay Interference by Immunoassay 2015

Specimens Reported Invalid Due to Immunoassay Interference by Immunoassay 6AM: 2015

Specimens Reported Invalid Due to Immunoassay Interference by Immunoassay AMP & COC: 2015

Positivity Rates 2011-2015

	Drug	ADL	UNS/INV	SUB	Combined Rate
2011	1.73%	0.02%	0.09%	0.04%	1.89%
2012	1.69%	0.02%	0.10%	0.04%	1.86%
2013	1.77%	0.02%	0.15%	0.04%	1.98%
2014	1.80%	0.02%	0.14%	0.04%	2.00%
2015	1.89%	0.02%	0.11%	0.04%	2.06%

Program Projects

- Urine and Oral Fluid Mandatory Guidelines for Federal Workplace Drug Testing
- ECCF Applications and Approvals
- Hair Testing Proficiency Testing
- Laboratory Investigations
- Marijuana Smoked and Vaporized Study
- Marijuana SmartBook

Summary

- The number of regulated specimens tested in 2011 through 2015 increased by 12.5%. The yearly increases ranged from 0.2 to 5.0%.
- The number of regulated specimens reported as Positive, Adulterated, Invalid and/or Substituted in 2011 through 2015 has increased by approximately 20%. The yearly increases ranged from 1.4 to 10.2%.

Summary (continued)

- Specimens reported as Invalid due to low pH decreased from the levels seen in 2011-2012, but have increased in late 2014 and remained elevated in 2015.
- Specimens reported as Invalid due to high pH increased in 2015.
- Specimens reported as Invalid due to Immunoassay interference continued to decrease from highs experienced in 2013.
